# The Analytic Hierarchy Process: A Tool for Prioritization, Evaluation, and Selection 

Rafikul Islam<br>Department of Business Administration<br>International Islamic University Malaysia<br>Jalan Gombak, 53100 Kuala Lumpur, Malaysia<br>Email: rislam@iium.edu.my

## Presentation Outline

## $\square$ Introduction

- Illustration of AHP through examples
- Consistency
- Combining group judgments
- AHP in Management Research

## Introduction

- Multiple Criteria Decision Making Method
$\square$ Introduced by Prof. Thomas L. Saaty in 1977 (University of Pennsylvania)
- Research
- Theory
- Applications
- Fuzzy AHP
$\square$ International symposium on the AHP
- International Journal of the AHP
$\square$ Analytic Network Process (ANP)

## Areas of AHP Applications

- Accounting
- Banking \& Finance
- Conflict Analysis
- Energy Planning
- Education
- Environmental Management
- Forecasting
- Healthcare
- Human Resource Management
- Information Systems
- Marketing
- Military
- Operations Management
- Politics
- Portfolio Management
- Project Management
- R \& D Management
- Resource Allocation
- Risk Analysis
- Sports
- Strategic Management
- Technology
- Total Quality Management
- Transportation

## AHP Research Objectives

- To prioritize a set of factors/criteria/attributes
- Executive selection criteria
- Benchmark firm evaluation criteria
- To select the best option/alternative from a number of
- Best project
- Best company to partner with
- To rank a set of alternatives
- University ranking
- Country ranking w.r.to quality of life, etc
- To evaluate a set of alternatives/To measure performance
- Employee performance evaluation
- Oraanizations performance evaluation
- To develop an index
- Competitiveness
- Green application
- Shari'ah application index
- Banks performance index

# Analytic 酶ierarchy 3 frocess: 

Relative Measurement

## AHP Method:

Step 1: Decompose the problem and identify the criteria and alternatives. Construct the hierarchy.

Step 2: Construct pairwise comparison matrices for all the criteria and alternatives.

Step 3: Determine the weights of the criteria and local weights of the alternatives from the above matrices by using a suitable weight determination technique.

Step 4: Obtain the overall weights of the alternatives by synthesizing the local weights.

## Example (Job Selection)

Suppose, after graduation, in order to get a job, Razali has appeared in a number of interviews. Ultimately, he has been offered by three companies, say Company A, Company B and Company C. The problem now before Razali is to select (or decide) the company where he will join.

Six criteria: 1) Salary, 2) Research, 3) Growth, 4) Working Environment, 5) Location, and 6) Reputation. Discuss how to use AHP to assist Razali in guiding him to select the best job.

## AHP Ratio Scale

| Verbal judgment of importance | Rating |
| :--- | :---: |
| Equally important | $\mathbf{1}$ |
| Equally to moderately important | 2 |
| Moderately important | $\mathbf{3}$ |
| Moderately to strongly important | 4 |
| Strongly important | $\mathbf{5}$ |
| Strongly to very strongly important | 6 |
| Very strongly important | 7 |
| Very strongly to extremely important | 8 |
| Extremely important | $\mathbf{9}$ |
| Note: $\mathrm{a}_{\mathrm{ij}}=1 / \mathrm{a}_{\mathrm{ij}}$ |  |

## Justification of 1-9 scale

- The capacity of human short term memory is seven separate items, plus or minus two.
- The brain of a regular human can simultaneously process, differentiate, and deal with at most 7 factors
- For some people this limit can be decreased to 5 , for some other people it can be increased to 9

## George A. Miller

" The Magical Number Seven, Plus or Minus Two: Some Limits on Our Capacity for Processing Information"
-(The Psychological Review, 1956, vol. 63, pp. 81-97)

## General Form of a Pairwise Comparison Matrix

$A=$|  | $\mathrm{C}_{1}$ | $\mathrm{C}_{2}$ | $\mathrm{C}_{\mathrm{n}}$ |
| :--- | :--- | :--- | :--- |
| $\mathrm{C}_{1}$ | $\mathrm{a}_{11}$ | $\mathrm{a}_{12}$ | $\mathrm{a}_{12}$ |
| $\mathrm{C}_{2}$ | $\mathrm{a}_{21}$ | $\mathrm{a}_{22}$ | $\mathrm{a}_{22}$ |
| $\mathrm{C}_{\mathrm{n}}$ | $\mathrm{a}_{\mathrm{n} 1}$ | $\mathrm{a}_{\mathrm{n} 2}$ |  |

## Pairwise comparisons

- Salary
- Research
- Growth
- WE
- Location
- Reputation
- Research

| B | 0.63 | 0.33 | 0.24 | 0.64 | 0.47 | 0.19 | $\mathbf{0 . 3 6}$ |
| C | 0.24 | 0.57 | 0.44 | 0.07 | 0.07 | 0.06 | $\mathbf{0 . 2 6}$ |

## Example 2 (Nuclear Waste Disposal)

Suppose Government of India wants to determine the best strategy for high level nuclear waste disposal. The strategies are:

1. Geological disposal (A)
2. Very deep hole (B)
3. Island disposal (C)
4. Subseabed disposal (D)
5. Disposal into space (E)

Suppose you are the consultant, guide the government in recommending the best option.

| No. | Criteria | Sub-criteria |
| :---: | :---: | :---: |
| 1. | State of technology ( $\mathrm{C}_{1}$ ) |  |
| 2. | Health, safety and environmental impacts ( $\mathrm{C}_{2}$ ) | i) Short-term radiological safety $\left(C_{21}\right)$ <br> ii) Long-term radiological safety $\left(\mathrm{C}_{22}\right)$ <br> iii) Ecosystem impacts $\left(\mathrm{C}_{23}\right)$ |
| 3. | $\operatorname{Cost}\left(\mathrm{C}_{3}\right)$ | i) Capital cost $\left(\mathrm{C}_{31}\right)$ <br> ii) Cost of operation $\left(\mathrm{C}_{32}\right)$ |
| 4. | Socio-economic impact ( $\mathrm{C}_{4}$ ) |  |
| 5. | Lead time ( $\mathrm{C}_{5}$ ) |  |
| 6. | Political impact ( $\mathrm{C}_{6}$ ) | i) National $\left(\mathrm{C}_{61}\right)$ <br> ii) International $\left(\mathrm{C}_{62}\right)$ |

## Selecting the best nuclear waste disposal strategy

| $A$ | 1 | $X$ |
| $B$ | $1 / X$ | 1 |

DM moderately (3)

- Use arithmetic mean to combine decisions?

$$
\begin{gathered}
\cdot x=(7+3) / 2=5 \\
\cdot 1 / X=(1 / 7+1 / 3) / 2=0.24 \neq 1 / 5
\end{gathered}
$$

- Use geometric mean to combine decisions?

$$
\begin{gathered}
\cdot x=\int(7 * 3)=4.58 \\
\cdot 1 / X=\delta(1 / 7 * 1 / 3)=0.22= \\
1 / 4.58
\end{gathered}
$$

## Concluding Remarks

$\square$ AHP is a highly successful decision making tool. The method has been widely applied in various disciplines
$\square$ Simplicity and mathematical rigour are behind its popularity
$\square$ Analytic Network Process is the generalised version of AHP

- Many research avenues are still open on theoretical development of AHP as well as its applications
