Are you aware of prior publication of this manuscript?

No

Is the manuscript's length appropriate?

Yes

Comments to author

To assist the author in revising the manuscript, please provide your comments on the technical aspects. Please comment as much as possible to assist author to improve the manuscript.

Following are the suggestions and comments on the manuscript entitled "Wear Simulation of Automotive Engine Component Materials Under Biodiesel".

1. The manuscript is having a lot of typing errors and spelling mistakes that need to check throughout the manuscript.
2. Need to add more literature related to the manuscript topic in the introduction section.
3. After adding literature in the introduction section find the research gap and scope related to the present manuscript.
4. Figure number is not proper i.e. figure 3 is assigned for two figures on pages no 4 and 5
5. Because of figure number mistakes, check the explanations mentioned in the manuscript.
6. Page 5, paragraph, line 6 onwards add the figure number for explanations.
7. The result and discussion, section need to add literature reference and discuss and compare present results with published results.

Wear Simulation of Automotive Engine Component Materials Under Biodiesel

Some of the points are unclear, so some comments are given:-

1. Literature review part is inadequate. Need to really emphasize on research gap. More recent and relevant references are needed to strengthen the problem statement and significance study. I don't find the important of this study highlighted in this manuscript.
2. Problem statement are not clearly addressed. There should be a clear highlighted problem and this paper is missing the crucial part. Significance of the study is unclear.
3. The results part was not clear, please, highlight your results. Result is too simple and inadequate, only one case study was presented. Need to elaborate and discuss about all results presented.
