The study found that the majority of the teachers were not aware of the presence of search engines other than Yahoo, Google and MSN. Metasearch engines were rarely used. Many were also not aware of the advanced search facilities. They went for any domain and all formats when surfing without knowing that they could select for specific files and specific language when looking for materials. The research points to the need for teaching effective surfing skills in pre-service and in-service teacher training programmes.

Masjid or mosque has been typecast as a building typology to represent the presence of Muslim in all parts of the world heedlessly. While the generic symbolism of Masjid as icon to Muslim lies in the definitive domes, arches and minarets, the definitions and abstract implications of Masjid in the Quran and the traditions of the Prophet S.A.W., do not directly addressed the issue physically. While the Masjid signify Islamic architecture to the mass, i.e. Muslim and Non Muslim alike, the architecture fraternity, on the other hand, remain indignant to understand the underlying principles that makes a Masjid a Masjid. The study through primary and secondary data extract from literary and architectural research, interviews
of architects known for Masjid projects, as well as physical case studies in Malaysia and abroad, had significantly disclose the real Masjid as it should be known, to the additions and layers it has been camouflaged with while the history unfold. The study’s objective is to demystify Islamic architecture at its very core-the Masjid. If the world, as the Quran quoted the Masjid, as every place on earth, then no matter whatever built form or architecture it assumes, if it is use as a Masjid, it is a Masjid in whatever name or form it portray. Wallahualam.

The study is therefore conducted on selected hospitals with the LDR, and of various space configurations, so as to obtain the critical dimension required to perform safe normal delivery effectively. As a qualitative research, the data will be obtained through literature review, planned and unplanned observation, structured and random interview as well as re-measurement of the rooms/spaces as bases of measurement. The significance of the finding was to ascertain the critical dimension required to perform the main function of the space as labour and delivery area apart from other findings of importance for the well being of the users.
