

# Management of severe open fracture of lower limbs with external fixation

Prof Dr Nazri Mohd Yusof

Advanced Trauma and Limb Reconstruction Surgery

Sultan Ahmad Shah Medical Centre (SASMEC @ IIUM)

Malaysia

**36<sup>th</sup> INTERNATIONAL  
PAK ORTHOCON 2023**

2<sup>nd</sup> - 5<sup>th</sup> November, 2023, Pearl Continental Hotel, Karachi

Theme: Current & Emerging Intervention in Orthopaedics

# Objective

- Principles of open fractures management
- The different types of external fixator
- The different uses of external fixator
- Common problems of external fixation

Open fracture is a severe soft tissue injury

# Aim

- Save life
  - Mangled extremity score
- Prevent infection
  - Antibiotics
  - Debridement
  - Early soft tissue coverage
  - Stable fixation
- Promote fracture healing
  - Bone graft / bone transport
  - Rehabilitation

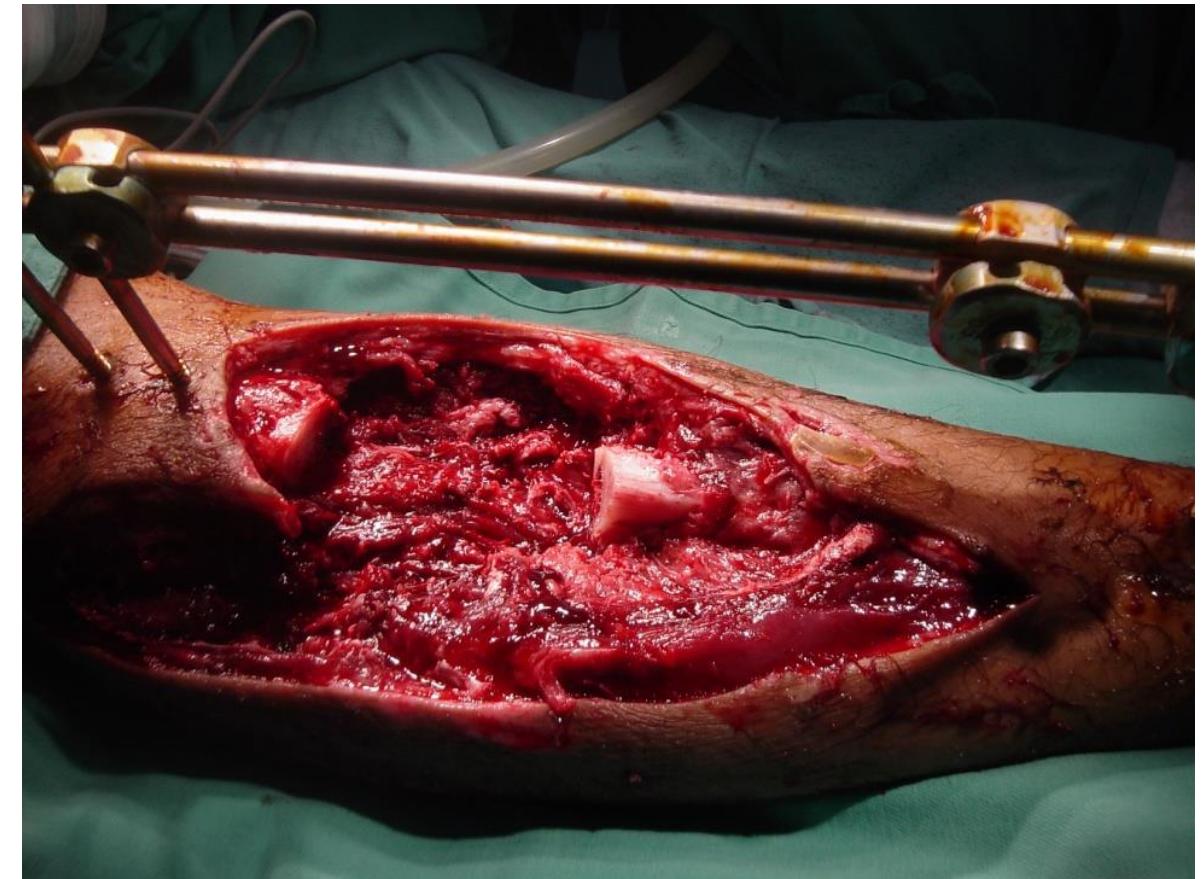

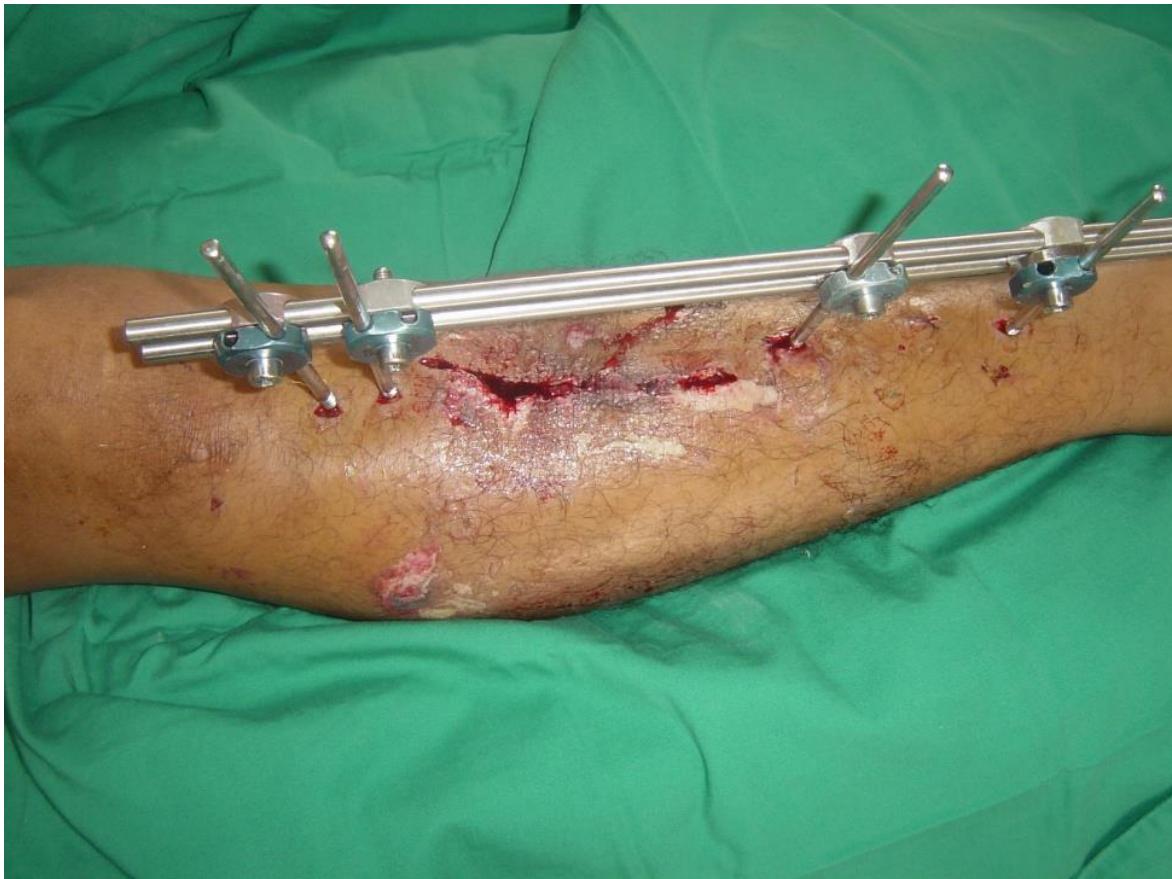

# STAGED SURGERY

Debridement

Soft tissue  
reconstruction

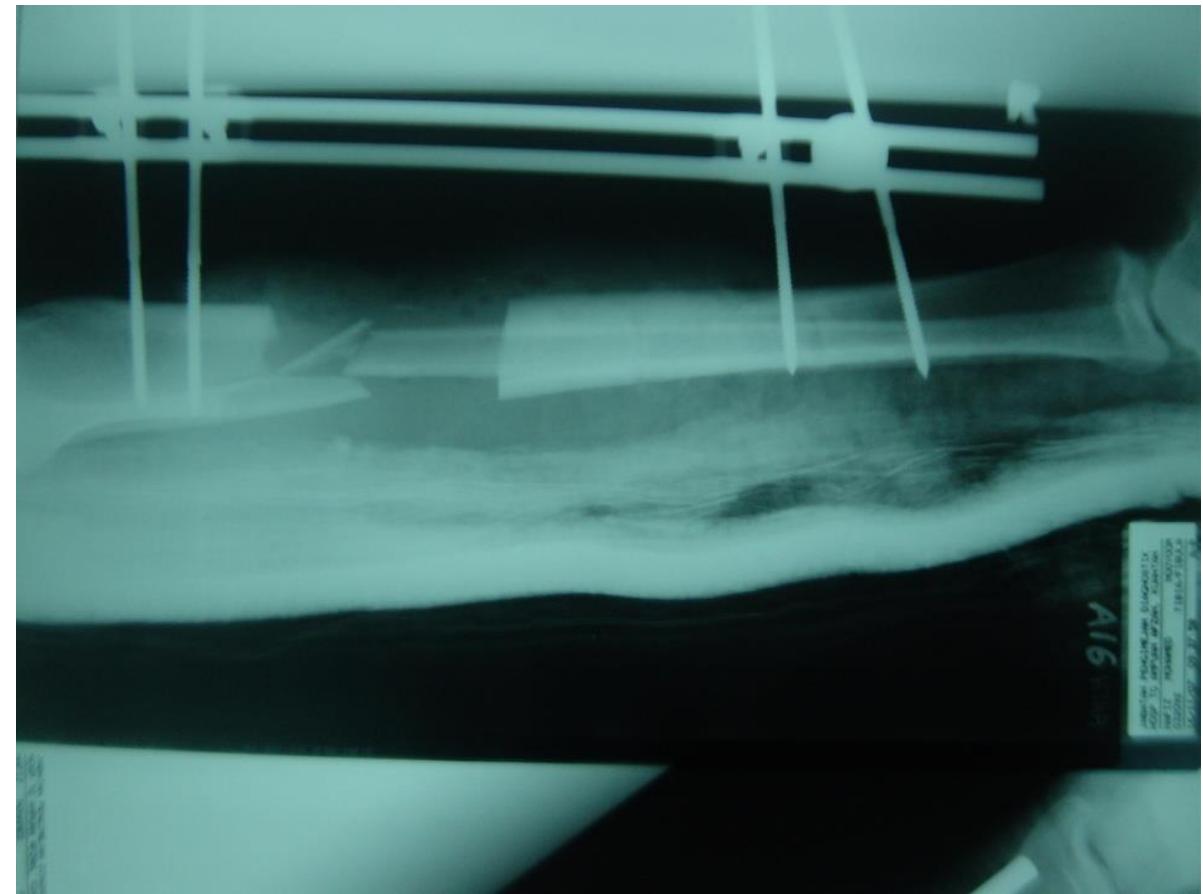

Bone  
reconstruction

# Debridement is the key

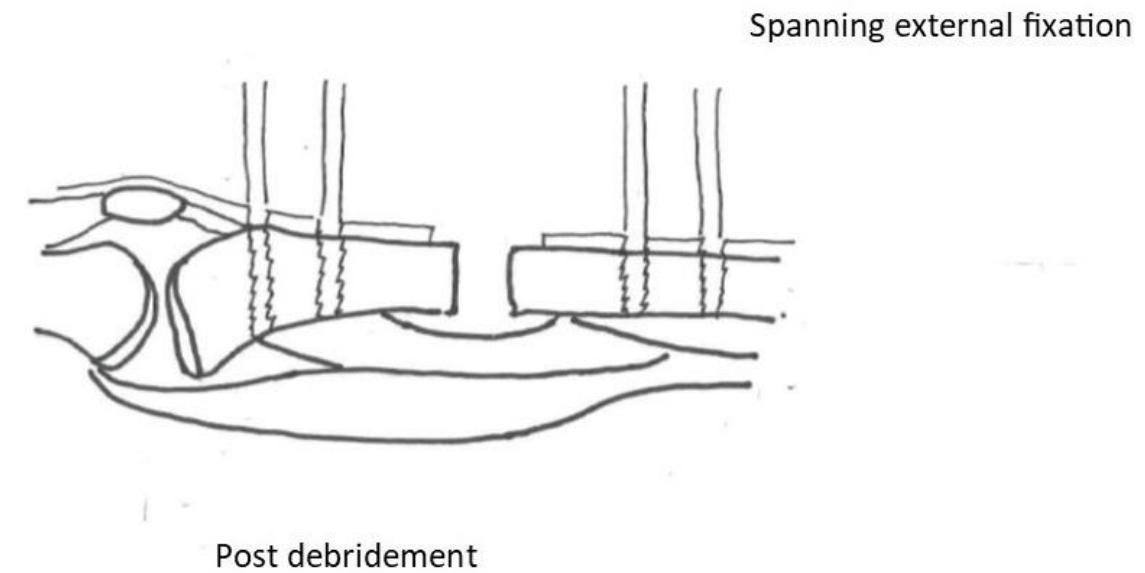

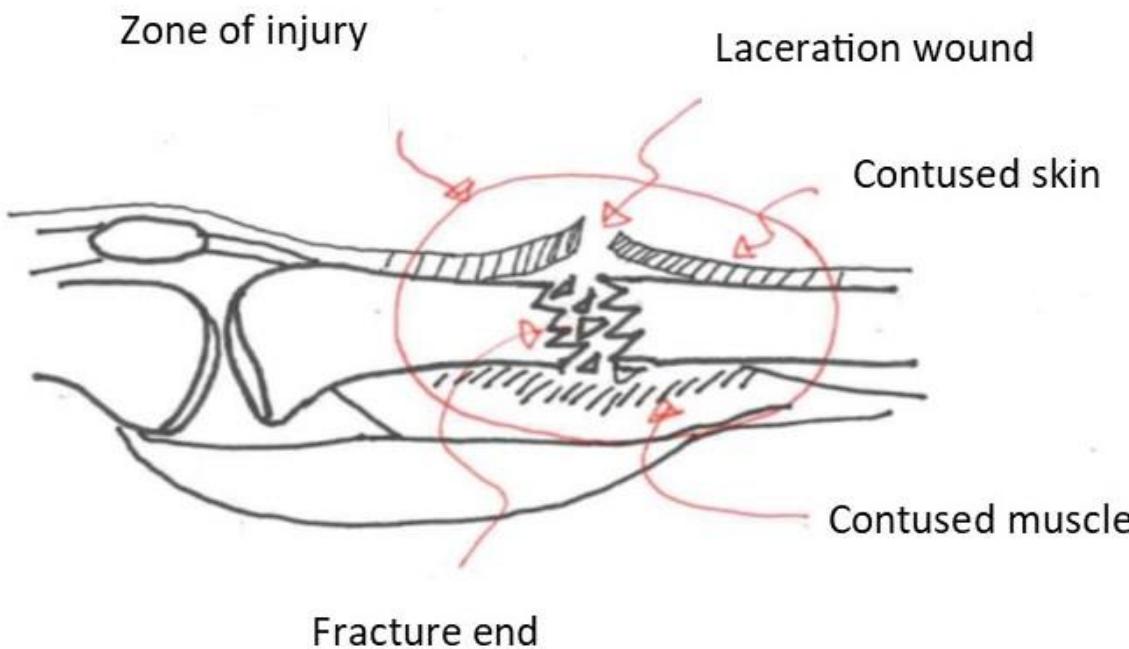

# BONE DEBRIDEMENT

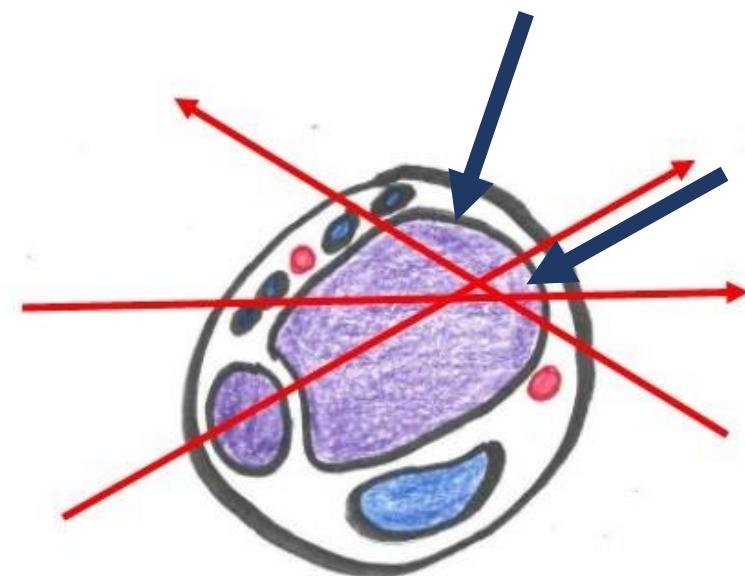

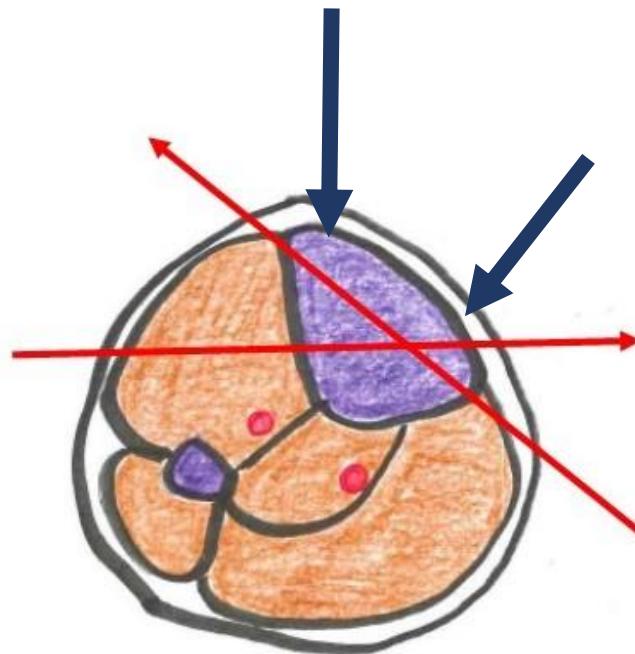

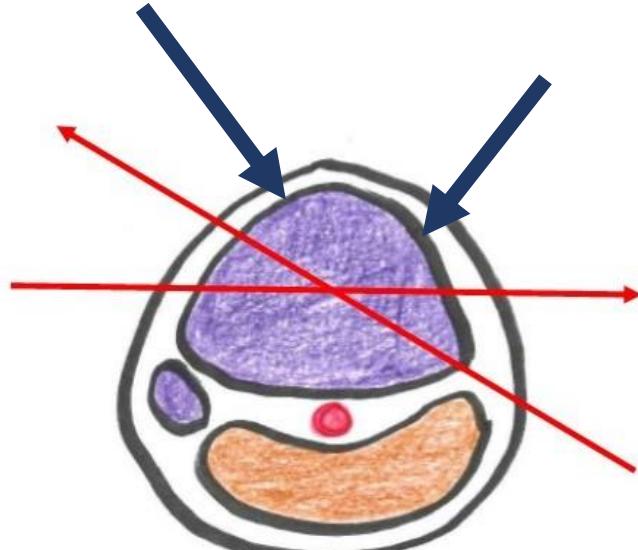

# Stability with spanning external fixator

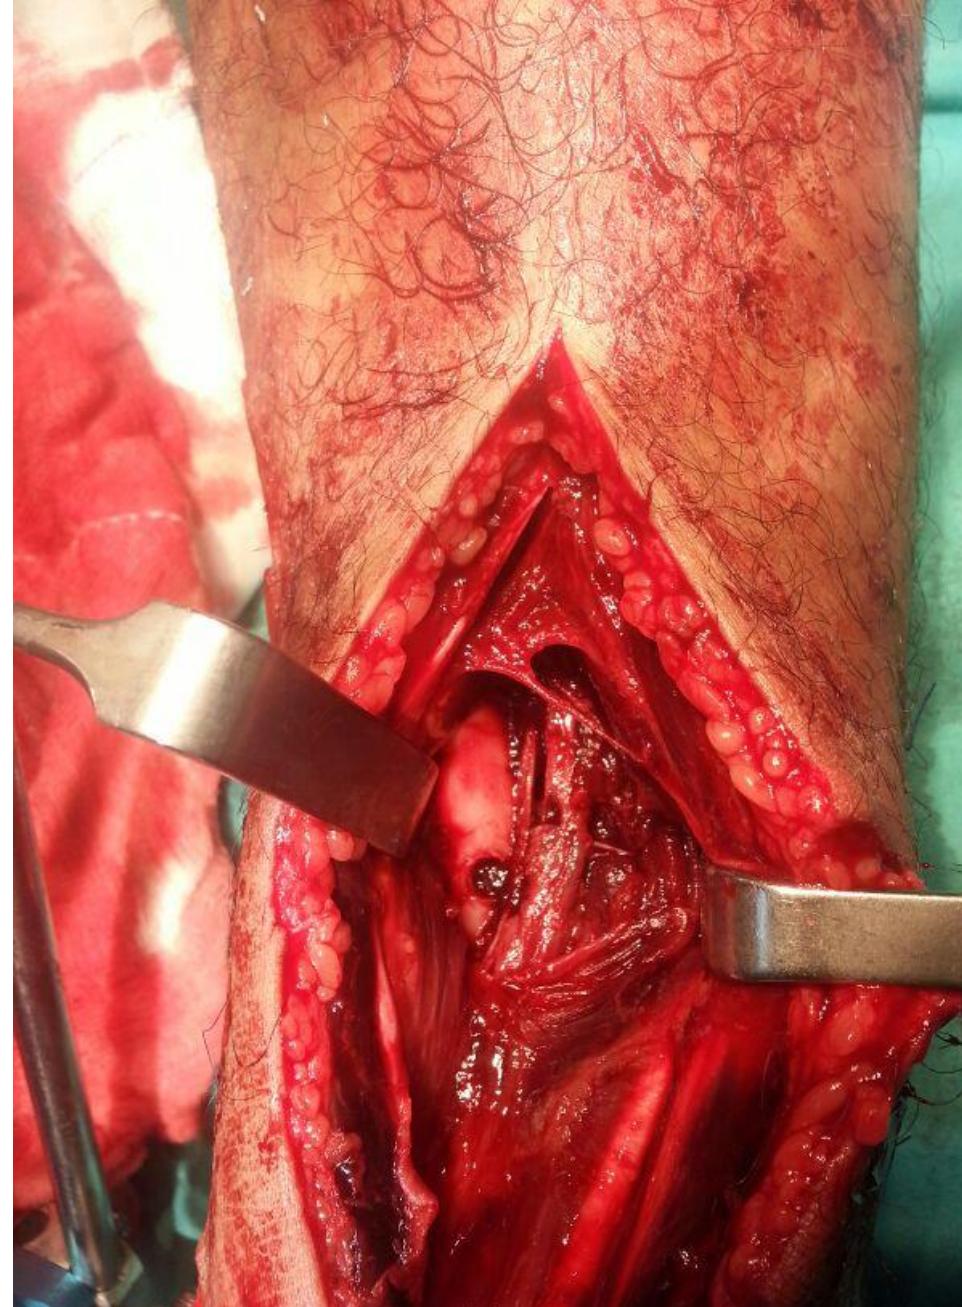

Safe corridor

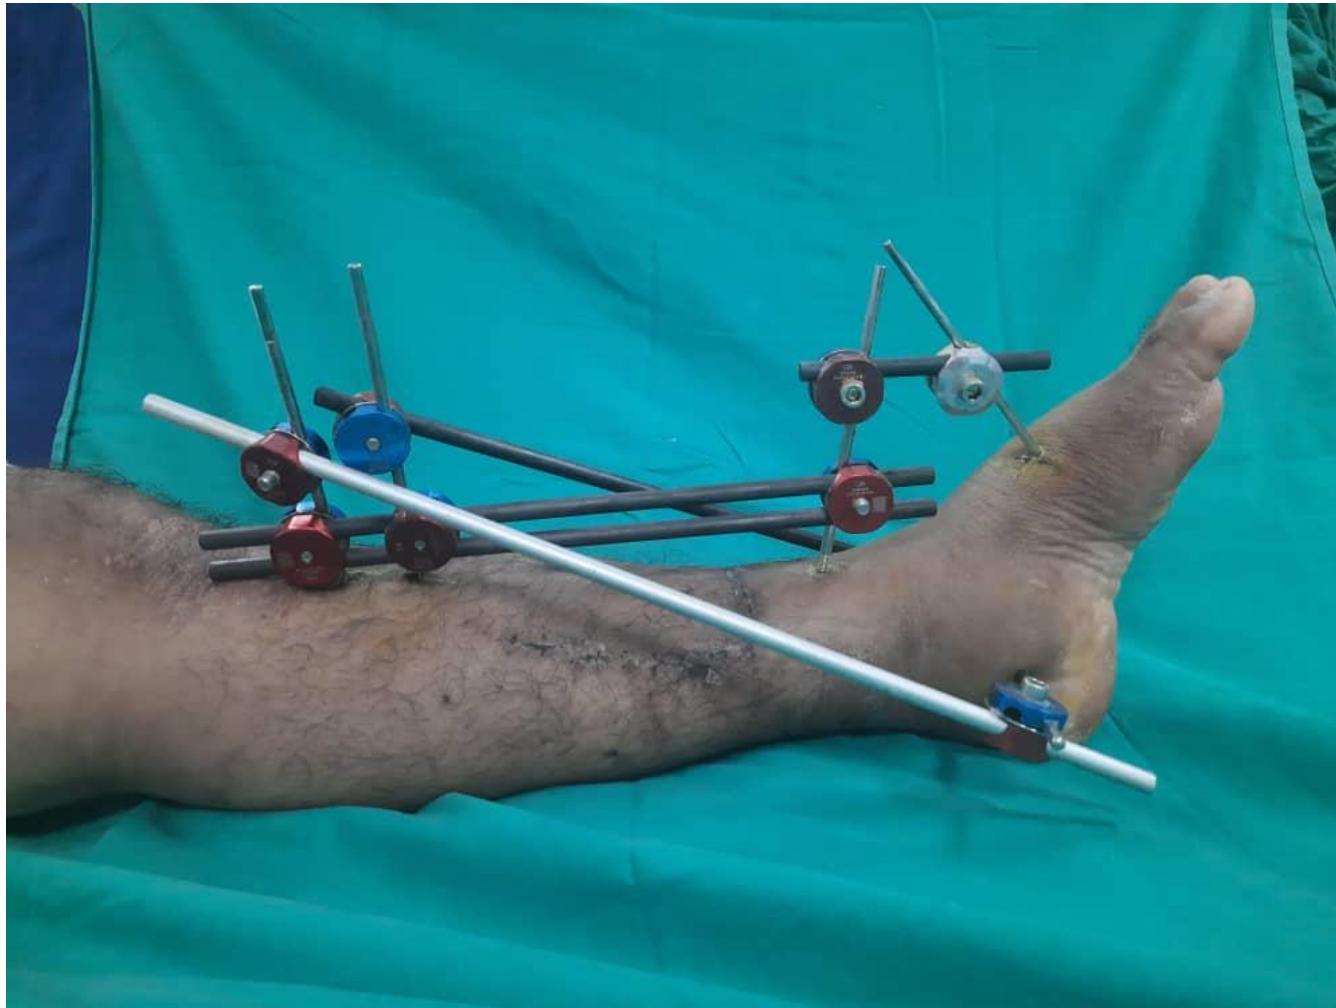

# SAFETY

Avoid screws in the zone of injury

# Cross ankle

# Cross knee

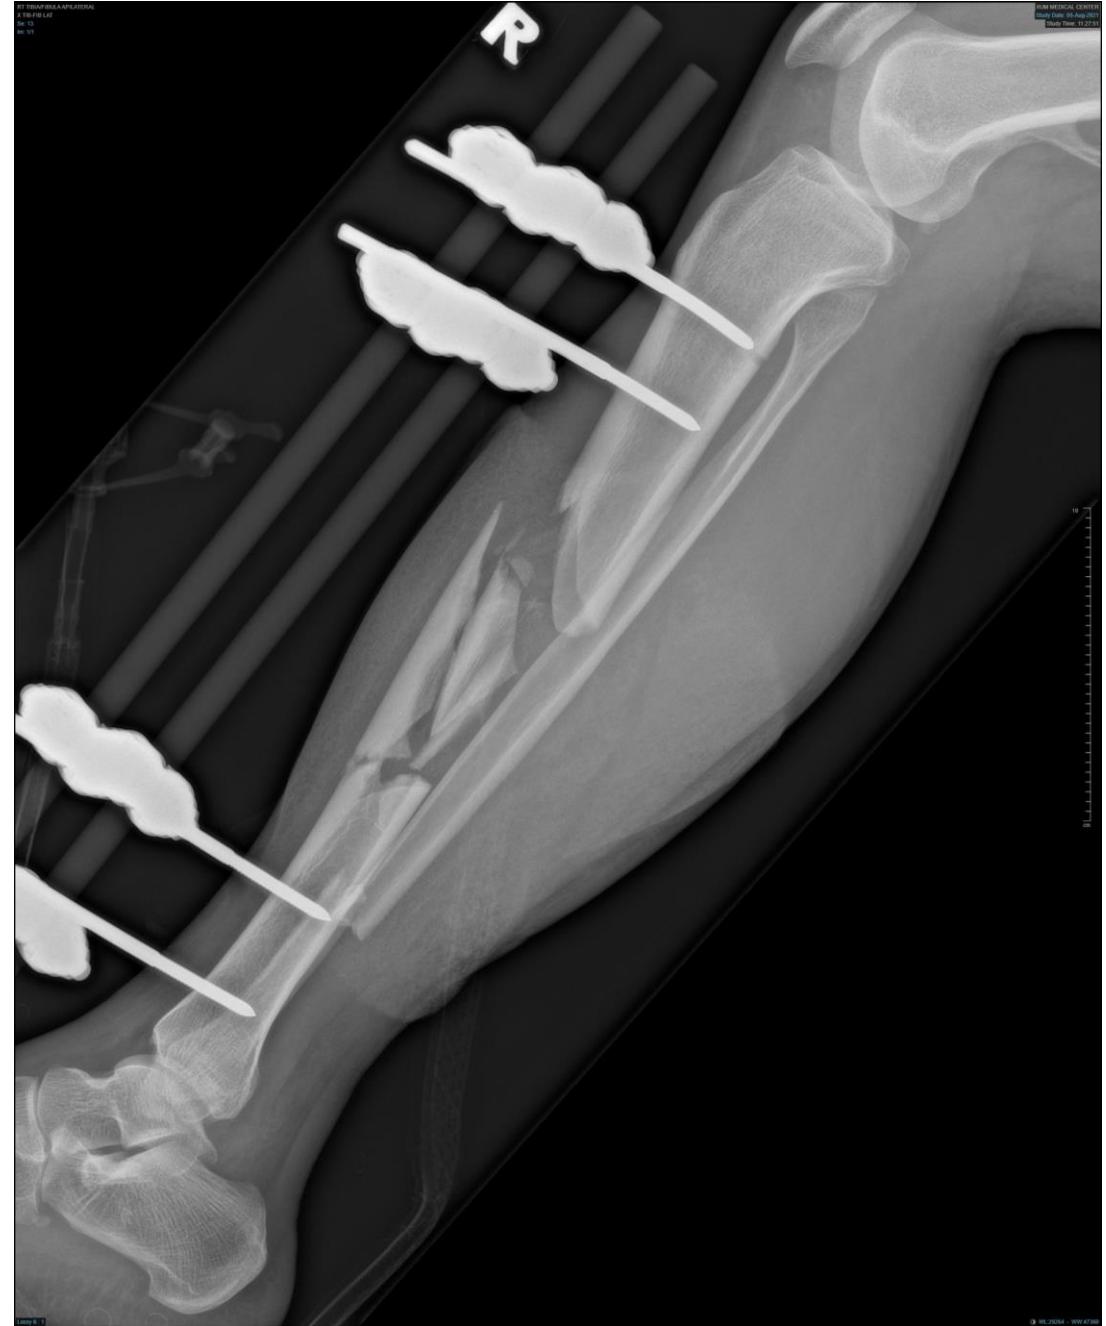

# Staged protocol

# Timing

## Delayed case

# Perforators flap and screw placement

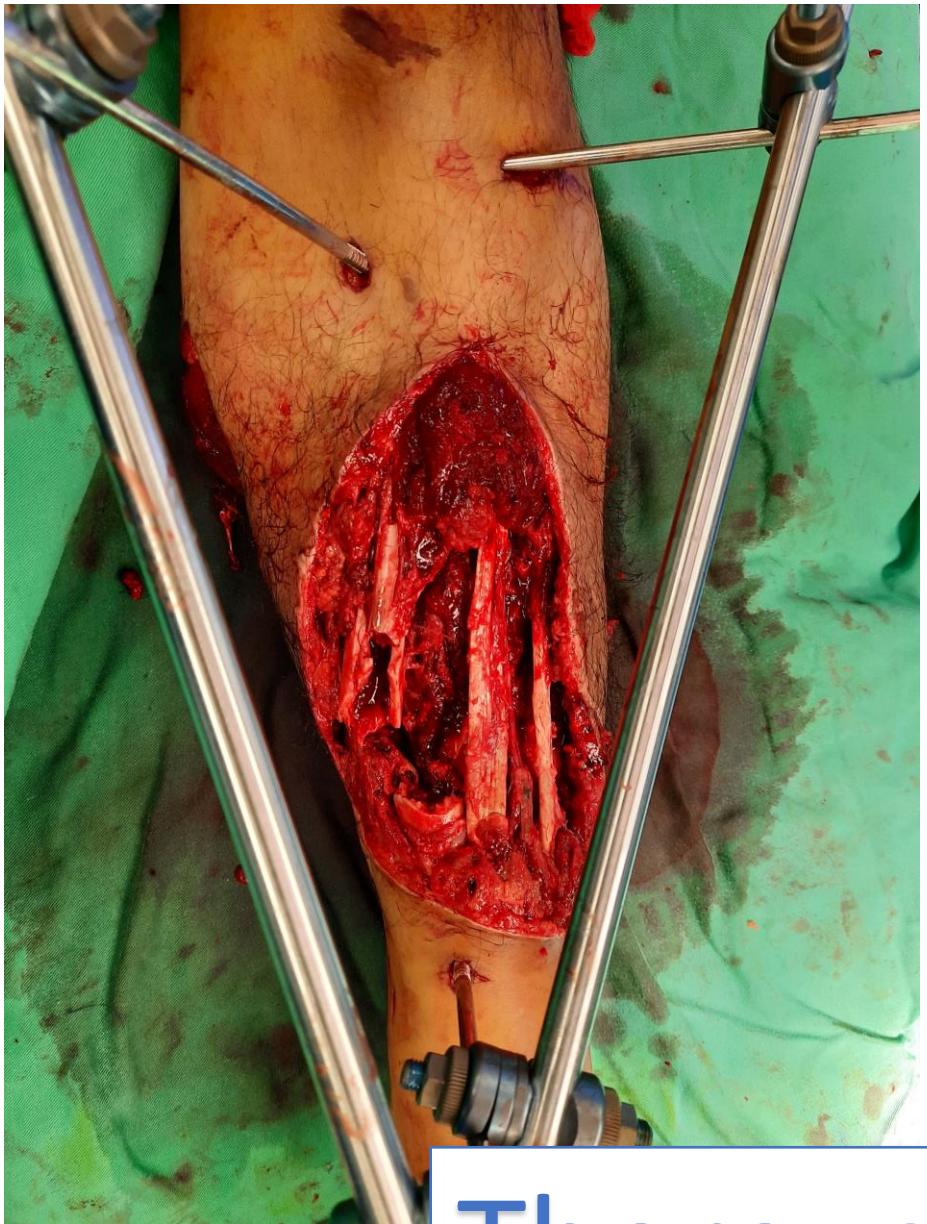

# Lateral plate and remove external fixator

Inadequate

Thorough debridement

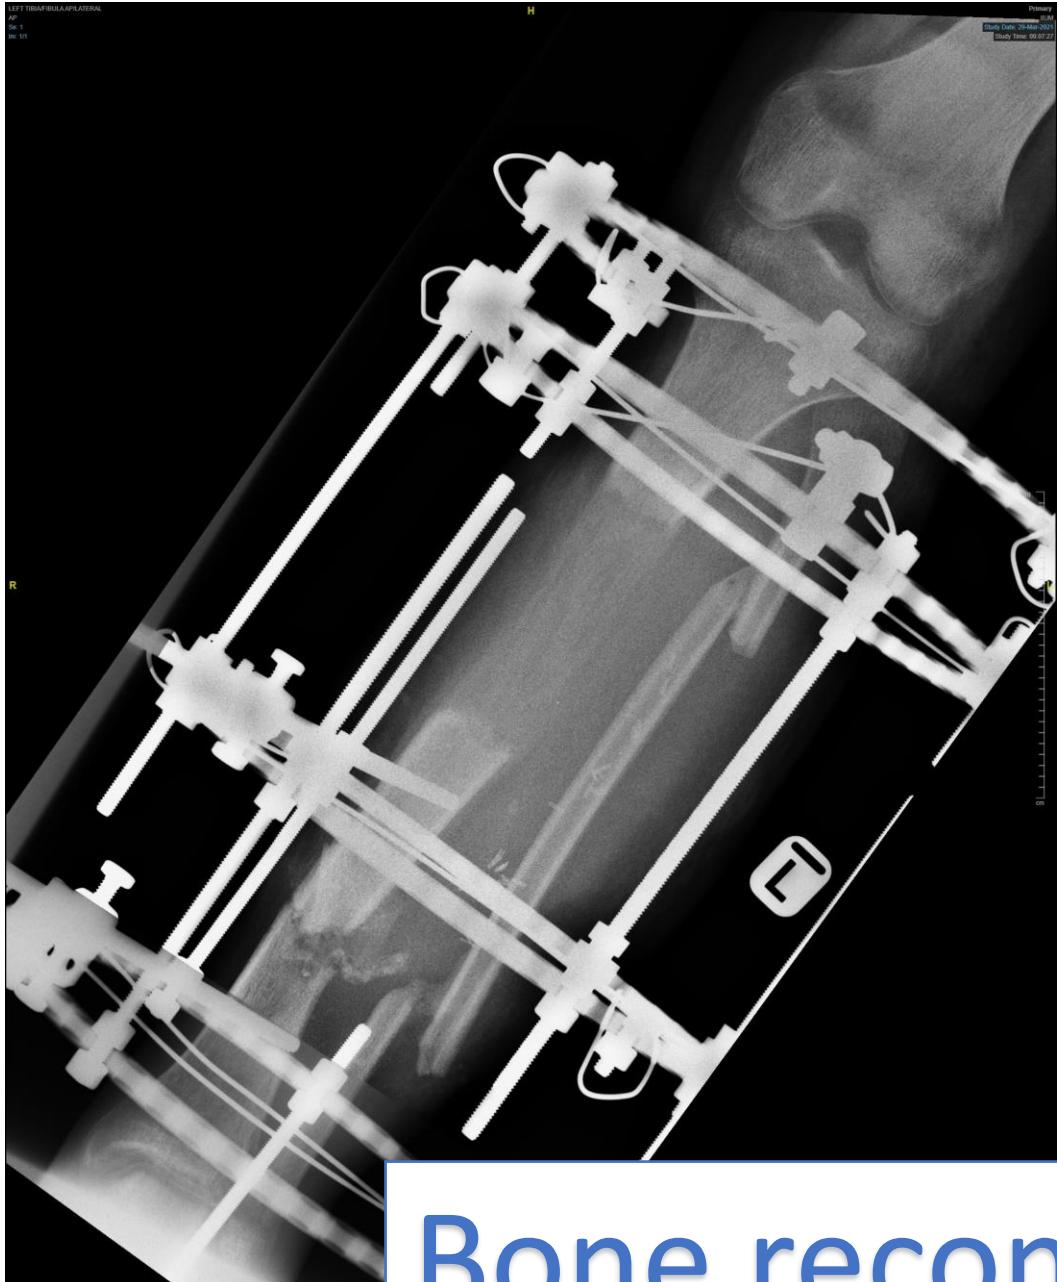

# Facilitate wound care

# Stable fixation

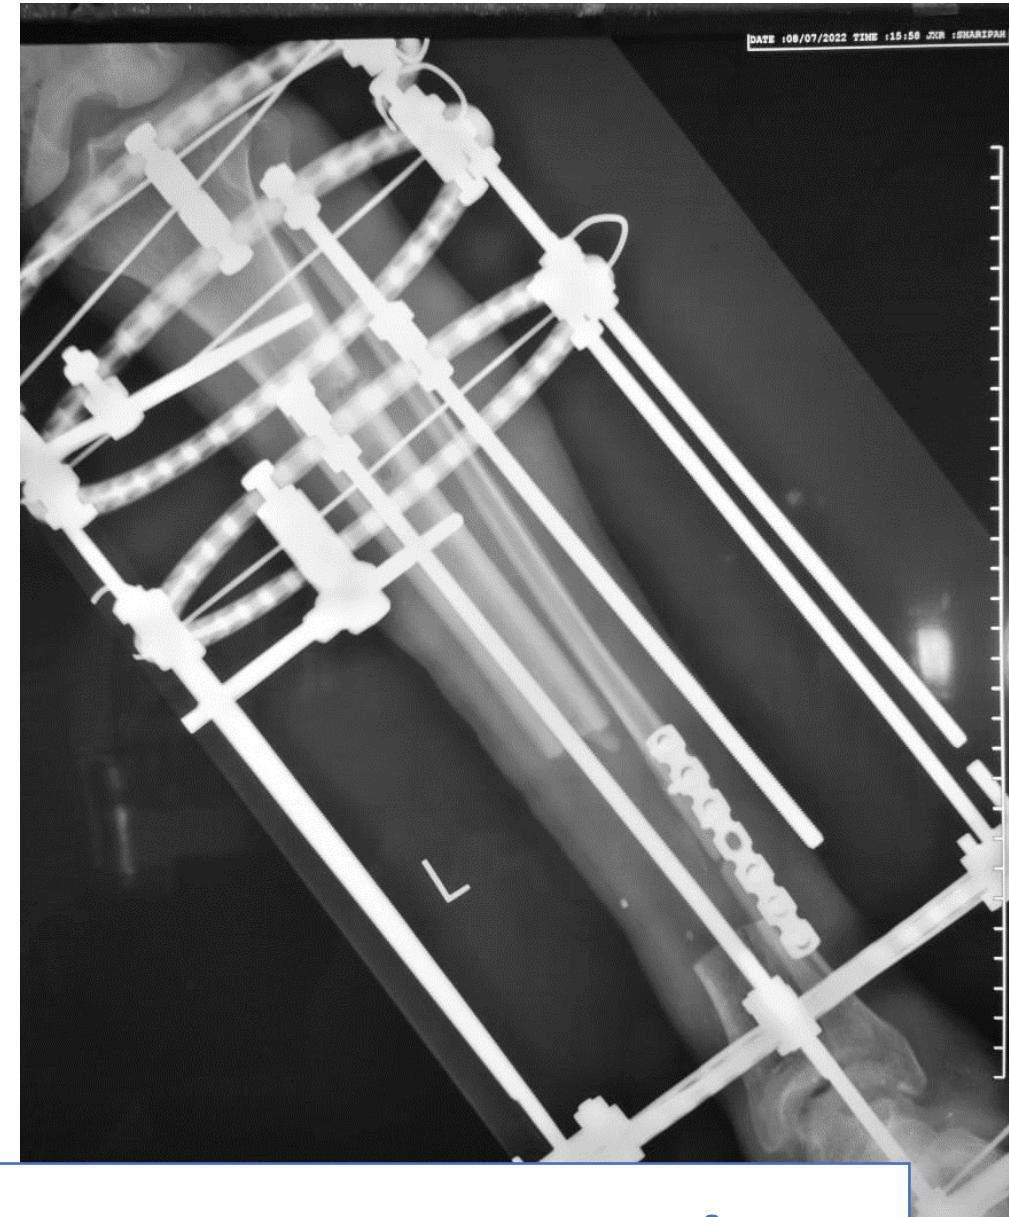

Soft tissue first

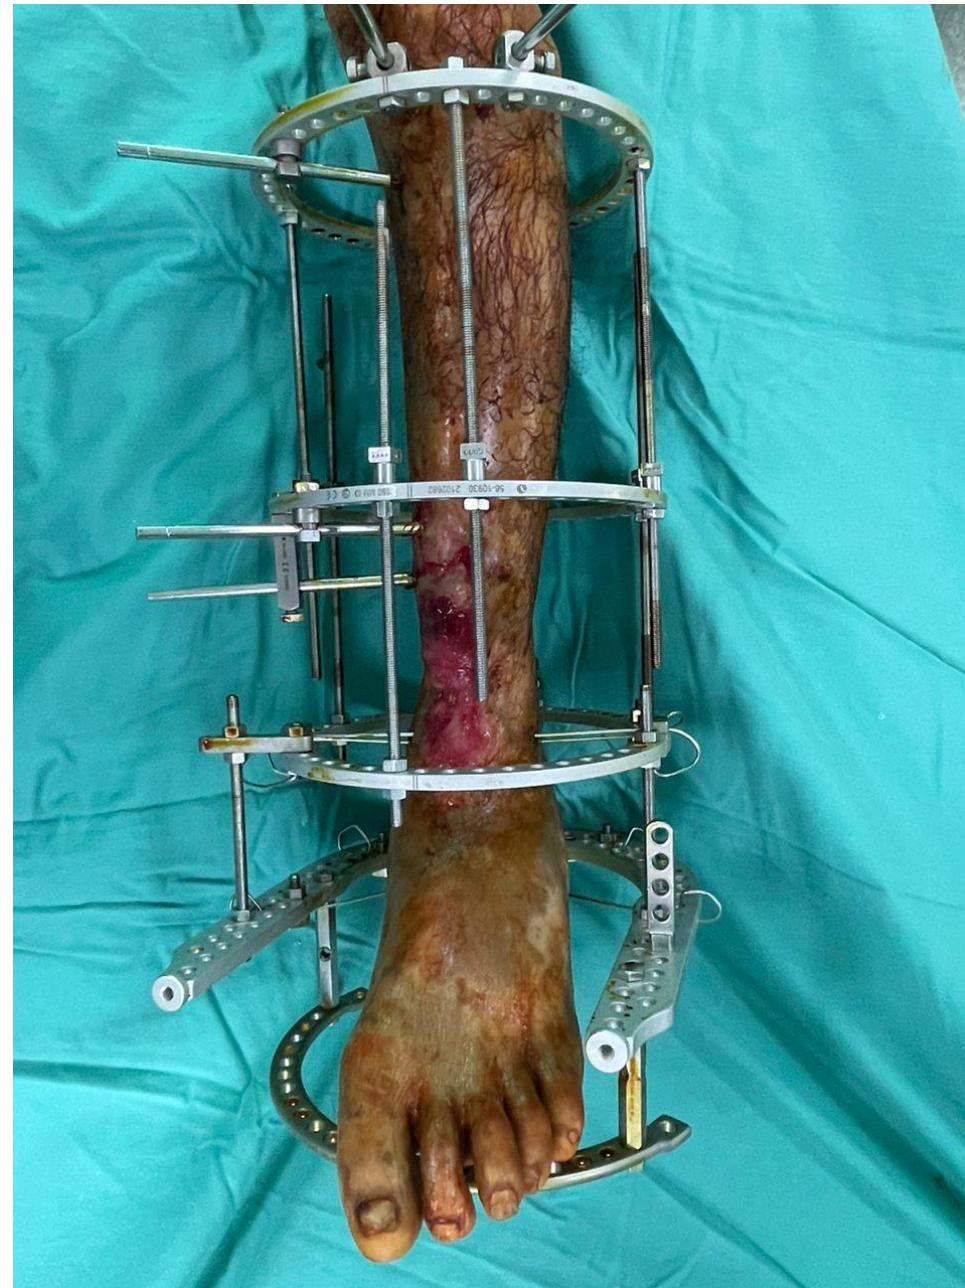

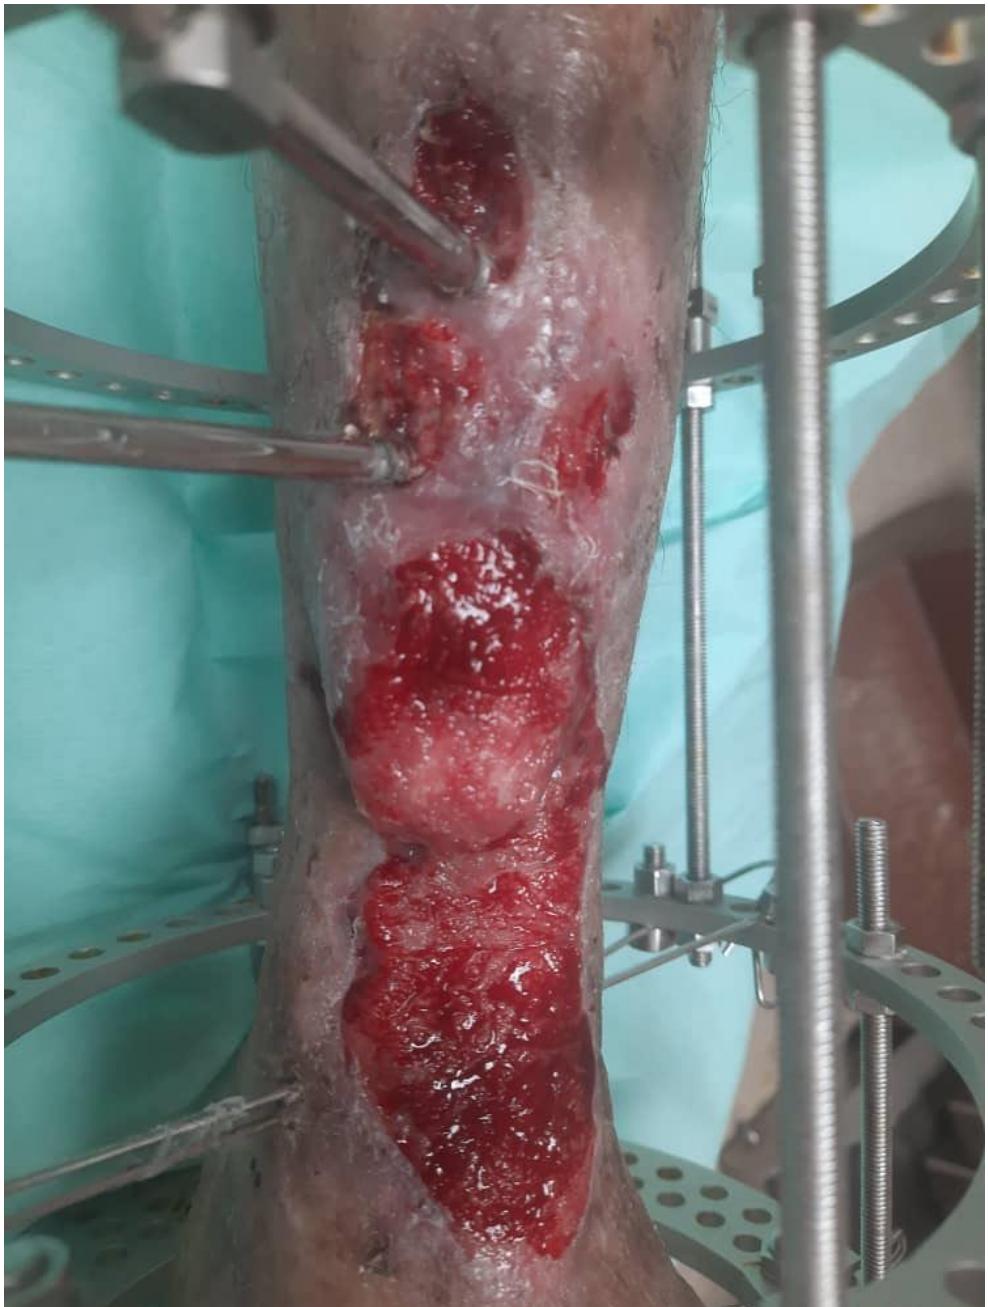

Bone reconstruction last

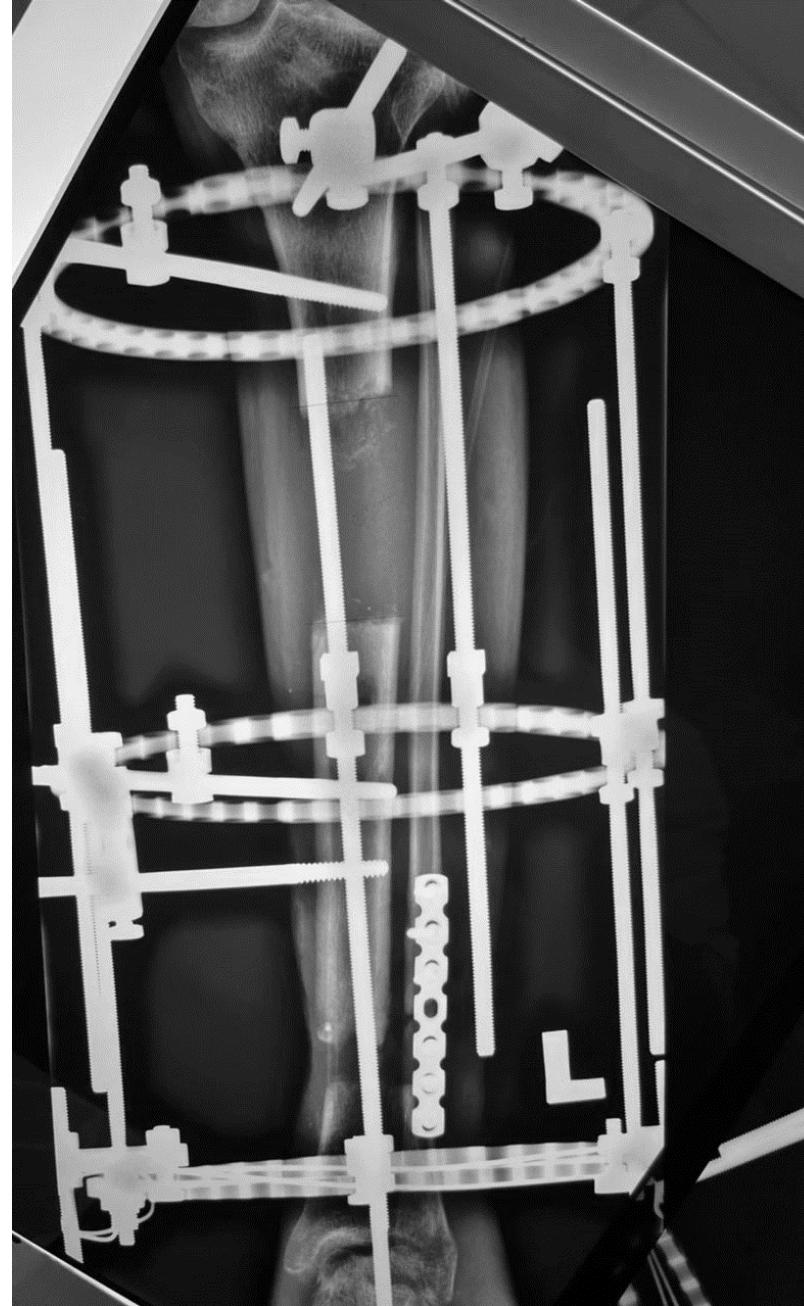

# Bone and soft tissue together

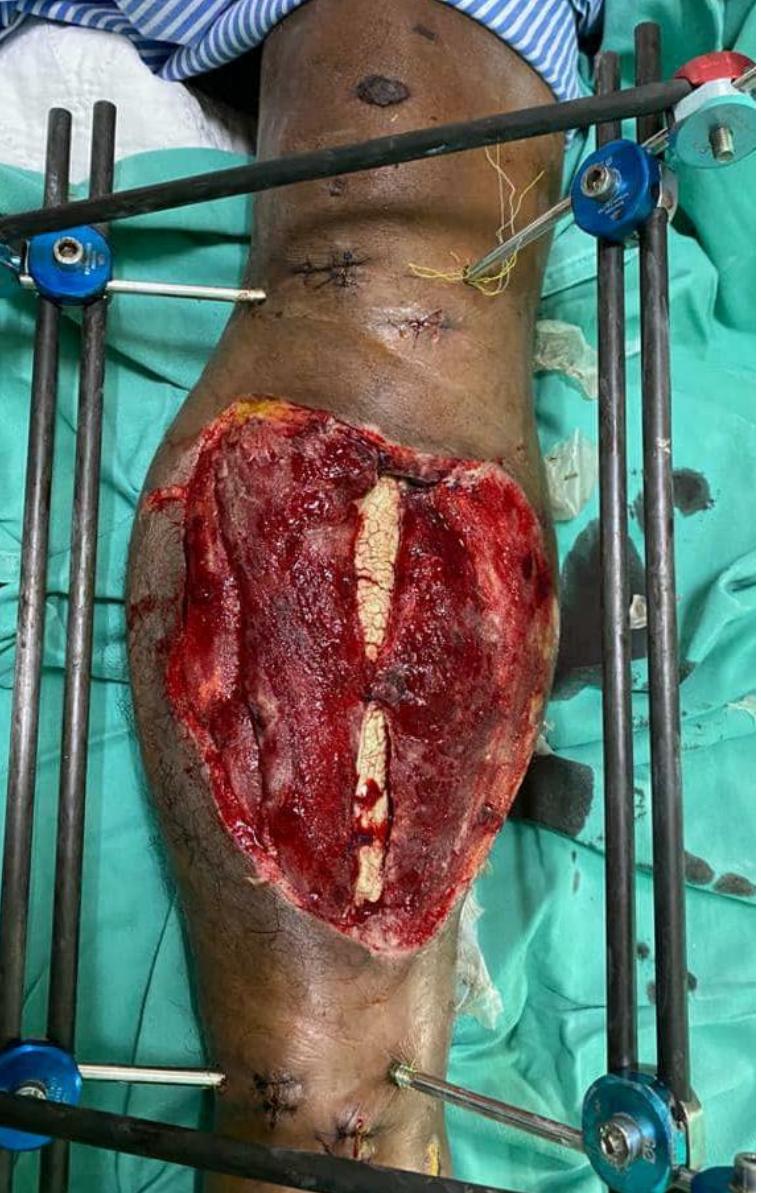

Bone and soft tissue regeneration

# Bone and soft tissue transplant

HOSPITAL TENGKU AMPUAN JEMER  
Saitul Shafee, 112,  
No. K-XR110405 ID: 900901065421 SKY:  
DATE: 14/09/2020 TIME: 19:01 Local time

External fixator protect the  
graft and prevent equinus

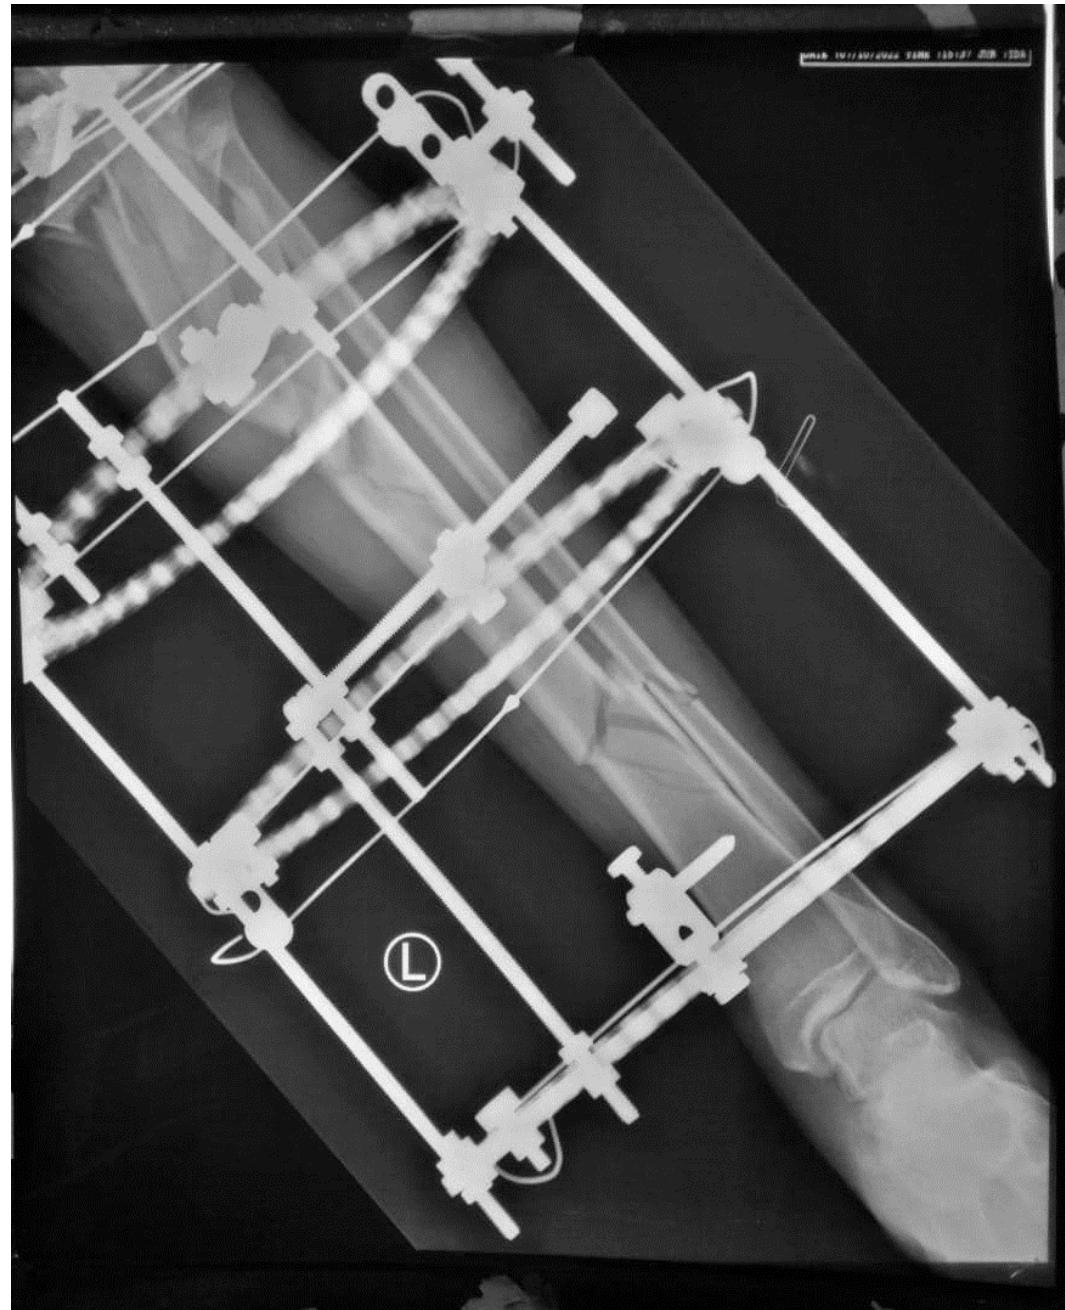

# Walk with orthosis

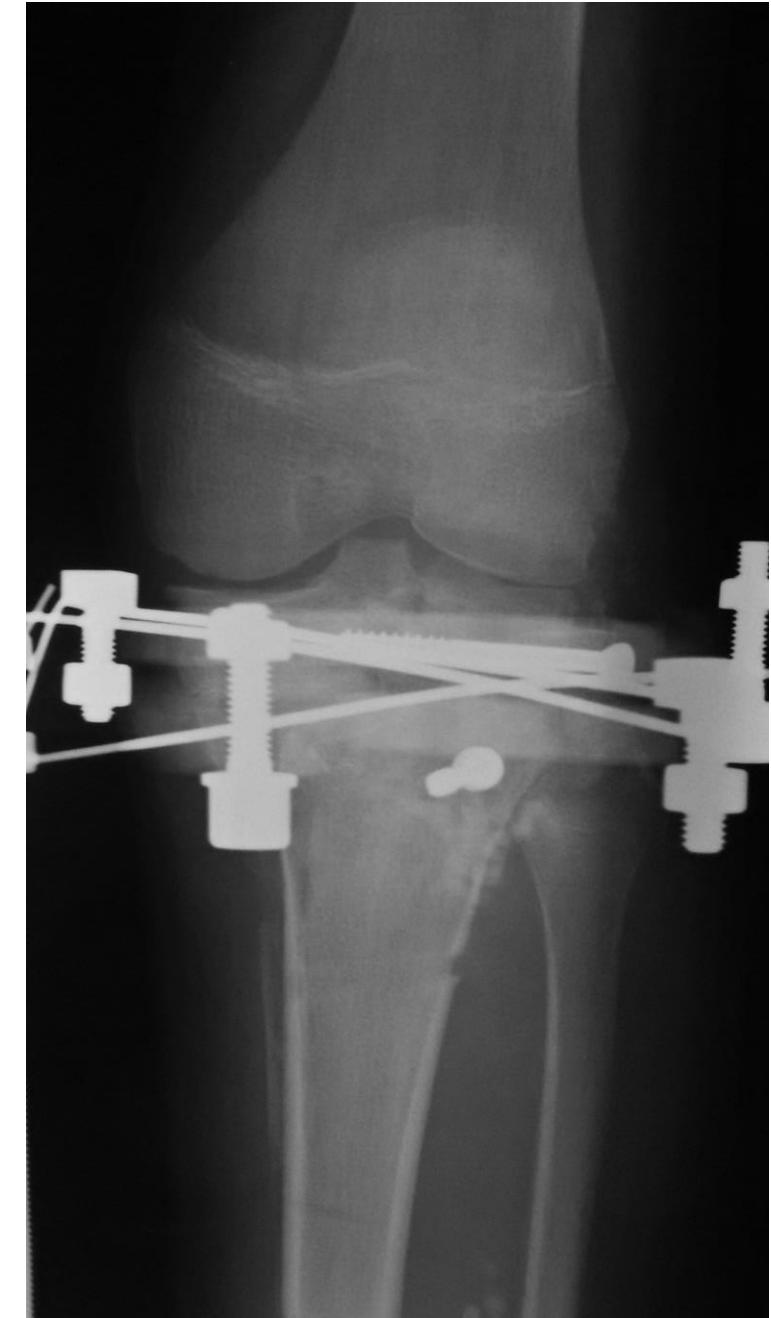

Intra articular and  
shaft open fracture

Intra articular open fracture

# Gastrocnemius flap after Ilizarov frame

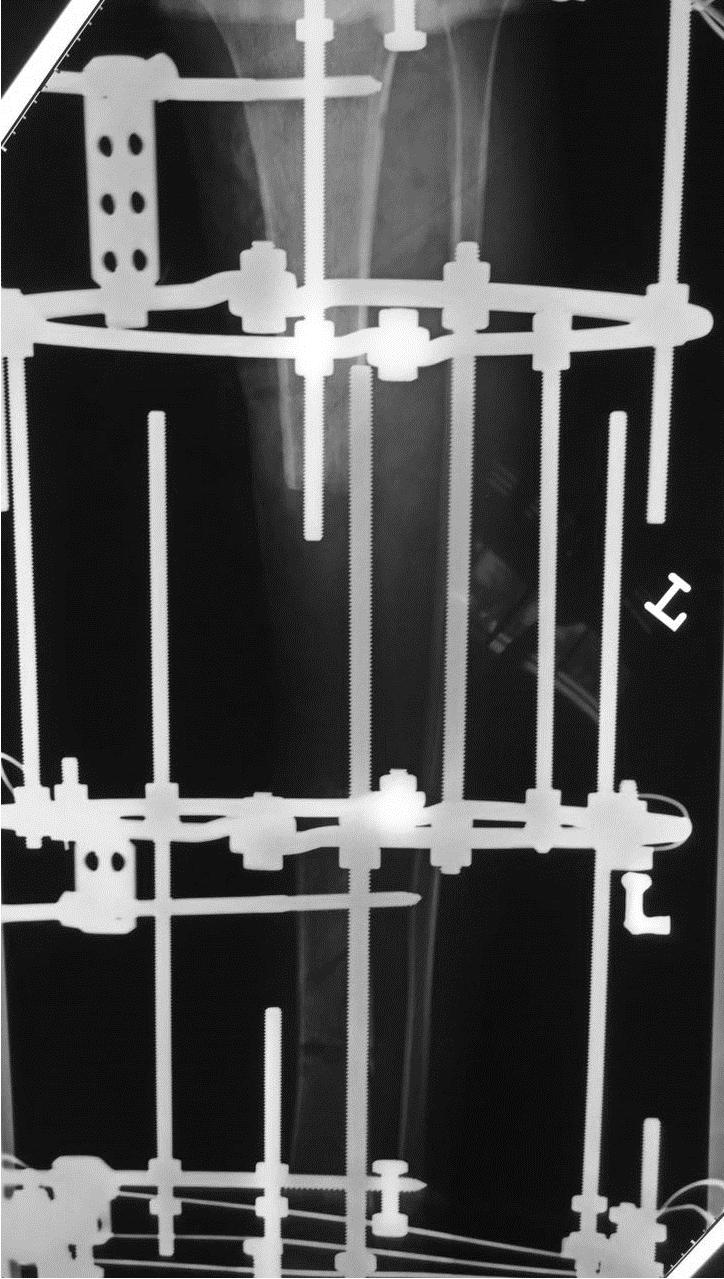

Problem with bone transport

# Retrograde bone transport

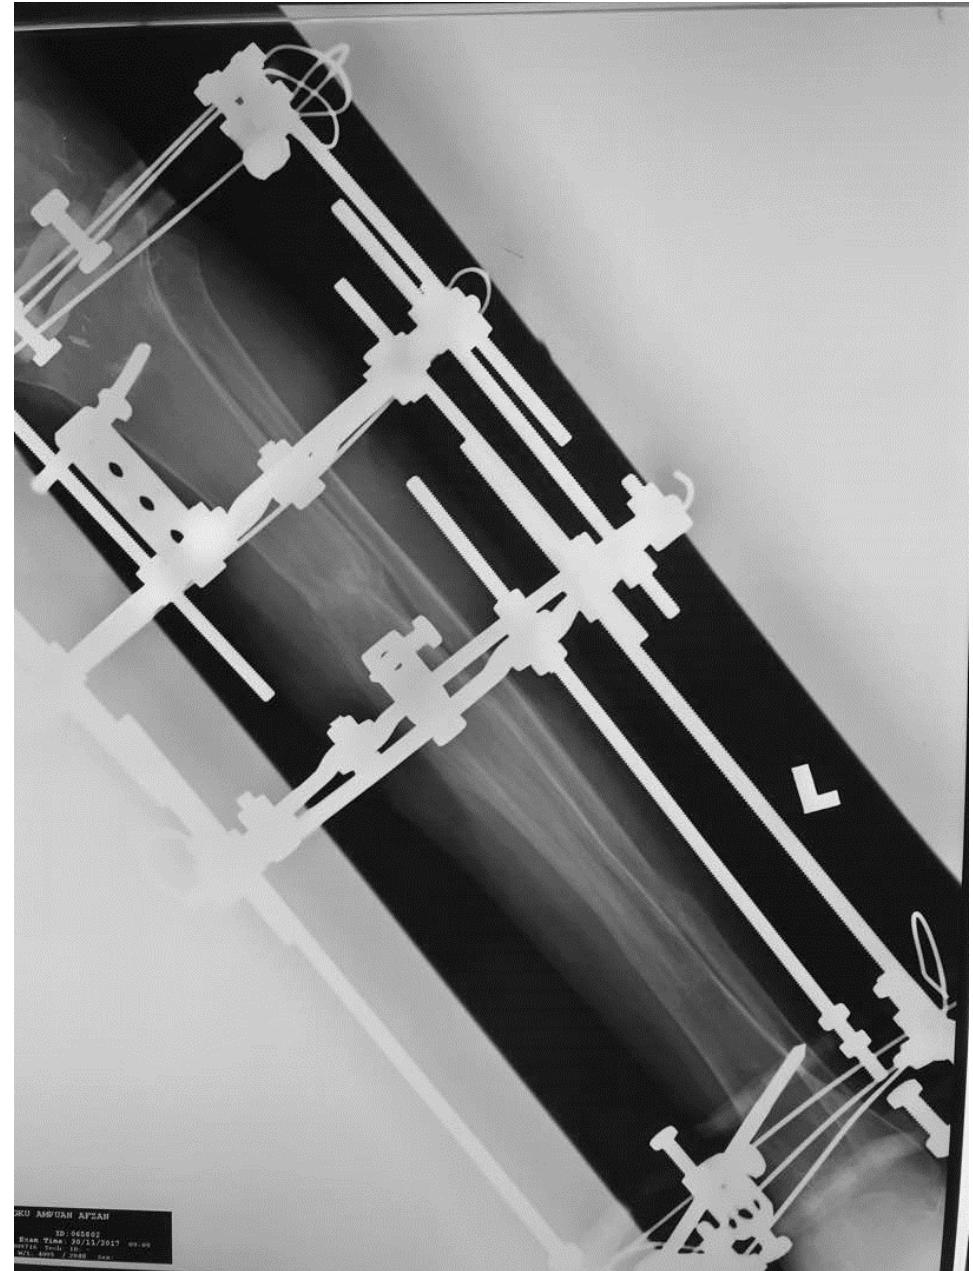

# Footplate to prevent equinus

# TA Lengthening and bone graft at docking

# Ankle equinus

SOMATOM De

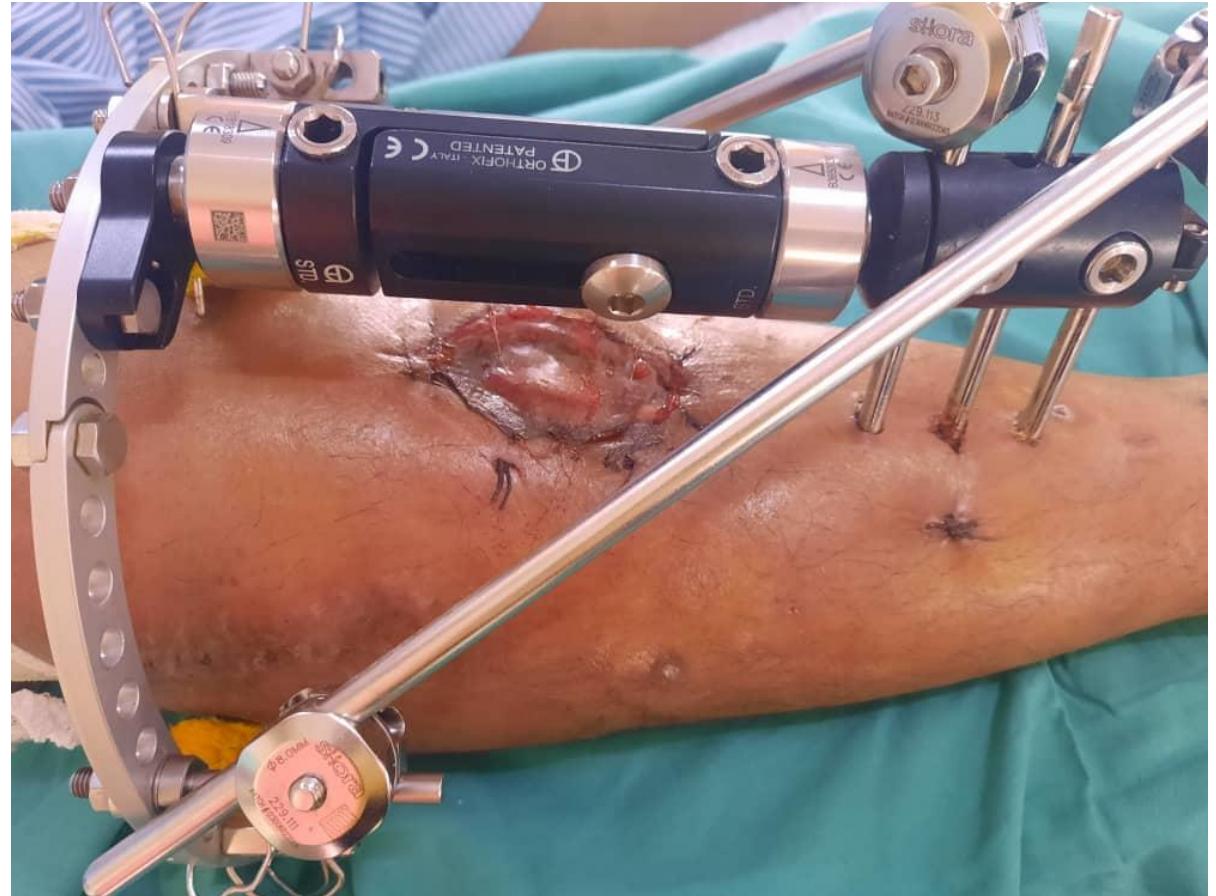

Spin: 1  
Tilt: 2

Severe pin site infection

# Hybrid fixator for easy access to flap surgery

# Patient-centered care

# Take home message

- External fixator
  - Temporary stabilization
    - Timing
    - Pin placement
    - **Protect the joint**
  - Definitive fixation
    - Severe comminution
    - Bone transport
    - Wound reconstruction
