Aim and Scope

The aim of the *Journal of Clinical Periodontology* is to provide a platform for exchange of scientific and clinical progress in the field of periodontology and allied disciplines, and to do so at the highest possible level. The Journal also aims to facilitate the application of new scientific knowledge to the daily practice of the concerned disciplines and addresses both practicing clinicians and members of the academic community. The Journal is the official publication of the European Federation of Periodontology but serves an international audience by publishing contributions of high scientific merit in the fields of periodontology and implant dentistry. The journal accepts a broad spectrum of original work characterized as clinical or preclinical, basic or translational, as well as authoritative reviews, and proceedings of important scientific workshops. The journal's scope encompasses the physiology and pathology of the periodontal and peri-implant tissues, the biology and the modulation of periodontal and peri-implant tissue healing and regeneration, the diagnosis, etiology, epidemiology, prevention and therapy of periodontal and peri-implant diseases and conditions, the association of periodontal infection/inflammation and general health, and the clinical aspects of oral rehabilitation using dental implants, including hard and soft tissue reconstructive therapies.

The *Journal of Clinical Periodontology* is available to members of the American Academy of Periodontology, the Australian Society of Periodontology and the Canadian Academy of Periodontology at a reduced rate. Please contact your society for further details. For submission instructions, subscription and all other information visit: wileyonlinelibrary.com/journal/jcpe.

Information for subscribers

THE JOURNAL OF CLINICAL PERIODONTOLOGY (ISSN 0303-6979 [print], ISSN 1600-051X [online]) is published monthly. Postmaster: Send all address changes to the JOURNAL OF CLINICAL PERIODONTOLOGY, Wiley Periodicals LLC, C/O The Sheridan Press, PO Box 465, Hanover, PA 17331 USA. Institutional subscription prices for 2025 are: Print & Online (premium): €2,158.00 (Europe), \$2850.00 (USA), \$3322.00 (Rest of World) £1,704.00 (UK). Prices are exclusive of tax. Asia-Pacific GST, Canadian GST/HST and European VAT will be applied at the appropriate rates. For more information on current tax rates, please go to <https://onlinelibrary.wiley.com/library-info/products/price-lists/payment>. The institutional price includes online access to the current and all online backfiles for previous 5 years, where available. For other pricing options, including access information and terms and conditions, please visit <https://onlinelibrary.wiley.com/library-info/products/price-lists>. Terms of use can be found here: <https://onlinelibrary.wiley.com/library-info/products/price-lists/title-by-title-terms-and-conditions>.

Delivery Terms and Legal Title

Where the subscription price includes print issues and delivery is to the recipient's address, delivery terms are **Delivered at Place (DAP)**; the recipient is responsible for paying any import duty or taxes. Title to all issues transfers Free of Board (FOB) our shipping point, freight prepaid.

Claims for Missing or Damaged Print Issues

Our policy is to replace missing or damaged copies within our reasonable discretion, subject to print issue availability, and subject to the terms found at Section V, Part C at <https://onlinelibrary.wiley.com/library-info/products/price-lists/title-by-title-terms-and-conditions#print-subscriptions>.

Back issues

Single issues from current and recent volumes are available at the current single issue price from cs-journals@wiley.com. Earlier issues may be obtained from <https://wolsupport.wiley.com/s/article/purchasing-single-issues-or-back-volumes>.

Corporate Responsibility & ESG

ESG (Environmental, Social, Governance) is essential to Wiley's mission of unlocking human potential. For over two centuries, Wiley has a history of helping the world's researchers, learners, innovators, and leaders achieve their goals and solve the world's most important challenges. We take our role as a corporate citizen seriously and are guided by transparency, accountability, and industry best practices. Through intentional climate action and strategic social impact, ESG advances Wiley's commitment to sustainability, positive impact, and leading global change. Follow our progress at <https://www.wiley.com/en-us/corporate-responsibility>.

Advertising and commercial reprints: CorporateSales@wiley.com

Wiley's Corporate Citizenship initiative seeks to address the environmental, social, economic, and ethical challenges faced in our business and which are important to our diverse stakeholder groups. Since launching the initiative, we have focused on sharing our content with those in need, enhancing community philanthropy, reducing our carbon impact, creating global guidelines and best practices for paper use, establishing a vendor code of ethics, and engaging our colleagues and other stakeholders in our efforts. Follow our progress at www.wiley.com/go/citizenship.

Wiley Online Library: View this journal online at wileyonlinelibrary.com/journal/jcpe.

Wiley is a founding member of the UN-backed HINARI, AGORA, and OARE initiatives. They are now collectively known as Research4Life, making online scientific content available free or at nominal cost to researchers in developing countries and enabling more researchers to publish open access by providing publisher backed waivers and discounts. Please visit Wiley's Content Access – Corporate Citizenship site: <https://www.wiley.com/en-us/corporate-responsibility>.

Journal of Clinical Periodontology accepts articles for Open Access publication. Please visit <https://authorservices.wiley.com/author-resources/Journal-Authors/open-access/hybrid-open-access.html> for further information about Open Access.

Note to NIH Grantees: Pursuant to NIH mandate, Wiley will post the accepted version of contributions authored by NIH grant-holders to PubMed Central upon acceptance. This accepted version will be made publicly available 12 months after publication. For further information, see www.wiley.com/go/nihmmandate.

disadvantages and its roles in providing beneficial nutrients to the general health and specifically the periodontal health had been studied. Based on the National Institute of Dental Research in the United States, high prevalence of gingival inflammation leads to early periodontal breakdown seen in young and adolescent patients. Vitamin C is closely related with the development of periodontal disease by periodontal pathogen that invade the epithelial barrier into the connective tissue. The aim of this narrative review is to summarize the utility and the association of vitamin C in pediatrics patients based on 2017 periodontal disease classification's perspective.

Methods: All relevant articles were gathered from the respective databases answering the objective of the authors. The studies were then reviewed and summarized.

Results: The use of vitamin C administration was effective in reducing gingival bleeding in gingivitis, but had no significant effect in periodontitis. Studies also shown that no significant improvement seen in alveolar bone absorption.

Conclusions: Vitamin C is closely related to the development of periodontal disease despite the patient's age. This review had summarized the advantages, disadvantages, treatment regime, and the close relationship between the vitamin C in the development of periodontal disease.

PR046 | Evaluating Salivary Biomarkers for Periodontitis Staging: A Systematic Review of Diagnostic Accuracy of Inflammation, Anti-Inflammatory and Tissue Destruction Markers

A. Fedele¹, A. Vaskevica¹, U. Gursoy²

¹Riga Stradins University, Riga, Latvia, ²University of Turku, Institute of Dentistry, Turku, Finland

Background & Aim: Periodontitis requires precise staging to specify treatment strategies.

Salivary biomarkers offer a non invasive alternative to conventional diagnosis, with specific markers that demonstrate the possibility of distinguishing early phases (I/II) from advanced (III/IV). This systematic review assesses the diagnostic value of inflammatory, anti-inflammatory and tissue destruction biomarkers in the treatment of periodontal diseases and focuses on their effectiveness in determining the severity of the disease.

Methods: A systematic review was conducted in accordance with the PRISMA guidelines, including 11 studies from databases such as PubMed, Elsevier, Scopus, and Mdpi. Inclusion criteria were studies assessing Interleukins (IL) and Matrix metalloproteinases (MMP's) in periodontitis stages. Data extracted included biomarker concentrations, diagnostic accuracy (sensitivity, specificity, AUC), and correlations with clinical indicators like CAL and PPD.

Results:

1. Anti-inflammatory biomarker IL-10 was higher in the initial stages, decreasing significantly as the disease progressed. This biomarker reflects a transition from an anti-inflammatory to a pro-inflammatory state, indicating its significant role in detecting initial stages of periodontitis.
2. Inflammatory biomarkers IL-1 β and IL-6 levels were significantly elevated in advanced stages, directly correlating

with CAL and PPD. IL-17 showed high sensitivity (96%) and specificity (100%) for distinguishing severe inflammation, making it a reliable marker for severity identifying advanced stages.

3. Tissue destruction biomarker MMP-8 levels are higher in advanced stages and strongly associated with PPD and CAL. With a sensitivity of 83.9% and a specificity of 79.2%. The MMP-8 test provides a practical detection application for severity of stage. MMP-9, although less elevated, supports the role of MMP-8 in indicating tissue breakdown in severe cases.

Conclusions: IL-1 β , IL-6, IL-17 and MMP-8 effectively indicate advanced periodontitis, while IL-10 is useful for early detection. High sensitivity and specificity values, particularly for IL-17 and MMP-8, support their utility in non-invasive staging. These biomarkers enable precise disease assessment, aiding in tailored treatment strategies based on severity.

PR047 | The Assessment of General Dental Practitioners' Knowledge, Attitude, Practices, Awareness, and Confidence (KAPAC) on Basic Periodontal Examination (BPE)

N.Z. Mohd Noh¹, W.N.S. Wan Ismail², W.N.I. Wan Maznan², S. Mohamed Khazin³, Y.D. Ardini⁴

¹Department of Restorative Dentistry (Periodontics Unit), Kulliyah of Dentistry, International Islamic University Malaysia, Kuantan, Pahang, Malaysia, ²Kulliyah of Dentistry, International Islamic University Malaysia, Kuantan, Pahang, Malaysia, ³Department of Restorative Dentistry (Endodontics Unit), Kulliyah of Dentistry, International Islamic University Malaysia, Kuantan, Pahang, Malaysia, ⁴Department of Paediatric Dentistry and Dental Public Health (Paediatric Dentistry Unit), Kulliyah of Dentistry, International Islamic University Malaysia, Kuantan, Pahang, Malaysia

Background & Aim: It is the primary responsibility of general dental practitioners (GDP) to provide periodontal screenings to new patients. Nevertheless, there is a scarcity of data on the level of knowledge, attitude, practices, awareness, and confidence (KAPAC) of GDP on BPE. The study aimed to identify the KAPAC in performing BPE among GDP and elucidate their associated factors.

Methods: Using a self-administered questionnaire distributed online to Malaysian GDP, a cross-sectional study was conducted. The questionnaire was divided into seven sections: demographics, knowledge, attitude, practices, awareness, confidence, and barriers to performing the BPE. Statistical analyses of the data were performed using descriptive statistics, inferential statistics (e.g., Independent *t*-test, one-way analysis of variance, Kruskal-Wallis, and Mann-Whitney *U* test), and Spearman's correlation coefficient test.

Results: A total of 137 GDP responded to the questionnaire. The majority of respondents exhibited good knowledge (73.0%), positive attitude (89.8%) and good practices (75.0%) regarding BPE. In contrast, only 66.4% and 51.8% of respondents expressed a high level of awareness and confidence in BPE, respectively. A significant difference (*p*-value<0.05) was observed between

respondents' (1) knowledge and confidence in the BPE with undergraduate qualification, (2) knowledge, attitude, and confidence in the mode of dental practice, and (3) attitude with area of practicing dentistry. It was found that knowledge and practices of BPE were positively correlated (p -value < 0.05) with awareness and confidence in performing BPE. Time constraints, inadequate instruments, and patient refusal were the major obstacles to BPE.

Conclusions: The KAPAC level of GDP towards BPE ranges from moderate to good, with room for improvement. These concerns may be addressed by considering factors affecting KAPAC. A greater focus on periodontal screening education and practice would result in improved oral health outcomes for patients. Periodontal screenings should be made a priority for patient care.

PR048 | Association Between Gingival Recession and Risk Factors

B. Moura¹, F. Salazar², R. Costa², C. Cabral², C. Reis²

¹University Institute of Health Sciences (IUCS-CESPU), Dental Medicine, Gandra, Portugal, ²University Institute of Health Sciences (IUCS-CESPU), Oral Pathology and Rehabilitation Research Unit (UNIPRO), Gandra, Portugal

Background & Aim: Gingival recession is a public health problem with a psychosocial impact. It has a multifactorial etiology and several risk factors. Epidemiological studies have reported a high prevalence of gingival recessions. Gender, age and smoking habits are considered risk factors. The objective of this study was to investigate the occurrence of RT1 (gingival recession type 1), RT2 (gingival recession type 2) and RT3 (gingival recession type 3) and risk factors based on the classification system proposed by Cairo.

Methods: This study analyzed 50 patients living in the North of Portugal, who attended dental appointments at the CESPU-University Clinic between January and May 2024. Patients had to be at least 18 years old, of both genders, with single or multiple gingival recessions in the oral cavity to be included in the study. A detailed clinical oral examination and periodontal assessment were carried out. Statistical analysis was carried out using SPSS software version 28 for Windows.

Results: A total of 647 gingival recessions were observed. A higher prevalence of RT2 and RT3 was found in males. The occurrence of RT3 on the buccal and lingual/palatine side was higher in patients over 65 years old. RT2 on the buccal side and RT3 on the buccal and lingual/palatine side were more prevalent in males. RT2 was more prevalent in ex-smokers. RT3 was more prevalent in ex-smokers.

Conclusions: A relationship was found between the prevalence of gingival recession and increasing age, as well as male gender. Most patients present gingival recession with interproximal attachment loss, RT3 and RT2 were the most prevalent type of recessions in this study. This study provides important information for gingival recessions, as it is very prevalent in the population.

PR049 | Association Between Proinflammatory Biomarker and Periodontitis-Associated Bacteria in Periodontal Pockets

N. Werner¹, V. Pitchika¹, C.B. Wetzel¹, K. Heck¹, C. Ern¹,

R. Heym¹, F. Schwendicke¹, C.V. Bumm¹, M. Folwaczny¹

¹LMU University Hospital, Department of Conservative Dentistry and Periodontology, Munich, Germany

Background & Aim: This study analyses the association between the microbial load of selected periodontitis-associated bacteria (PAB) and proinflammatory biomarkers collected from gingival crevicular fluid (GCF) in patients affected by periodontitis.

Methods: 507 patients were included in this retrospective analysis. Baseline GCF and PAB samples were collected from the deepest periodontal pocket of each quadrant and pooled separately for further analysis. PAB samples were quantitatively analysed using ELISA-based kits (*Porphyromonas gingivalis* (Pg), *Aggregatibacter actinomycetemcomitans* (Aa), *Prevotella intermedia* (Pi), *Fusobacterium nucleatum* (Fn), *Treponema denticola* (Td), and *Tannerella forsythia* (Tf)). The microbial data were then compared with the concentrations of proinflammatory biomarkers, specifically interleukin-8 (IL-8) and active matrix metalloproteinase-8 (aMMP-8).

Results: Patients presented with a median number of 27 [22; 31] teeth at baseline. Of the 507 subjects, 15 (3.0%) presented with stage I, 28 (5.5 %) with stage II, 353 (69.6%) with stage III and 111 (21.9 %) with stage IV periodontitis. Proinflammatory biomarker levels were significantly lower in smokers compared to non-smokers ($p < 0.001$). Linear regression, adjusted for sex, diabetes, and smoking status, showed an independent relationship between both mean and maximum probing depth and increased levels of proinflammatory biomarkers. Additionally, a multivariate regression, adjusted for the same confounding factors and mean probing depth, identified an association between IL-8 concentrations and the levels of Pg and Pi. However, no association was found between PAB levels and aMMP-8.

Conclusions: Higher proinflammatory biomarkers were observed in patients with more advanced periodontal disease. The results further confirm that smoking is an important confounder when examining biomarkers. Notably, the findings suggest that baseline IL-8 levels, but not aMMP-8, are associated with the levels of different PABs (Pg and Pi).

PR050 | Efficacy of Communicating Periodontal Risk on Psychological Outcomes and Supragingival Plaque Control in Patients Undergoing First Periodontal Consultation: A Parallel-Arm, Randomized Trial

G. Secchiati¹, A. Simonelli^{1,2}, M.E. Guarnelli^{1,2}, G. Montemuzzo^{1,2}, C. Scapoli^{1,3}, L. Trombelli^{1,2}, R. Farina^{1,2}

¹University of Ferrara, Research Centre for the Study of Periodontal and Peri-implant Diseases, Ferrara, Italy, ²Azienda Unità Sanitaria Locale (AUSL), Operative Unit of Dentistry, Ferrara, Italy, ³University of Ferrara, Section of Biology and Evolution, Ferrara, Italy

Background & Aim: Among the validated periodontal risk assessment tools, PerioRisk has shown the best prognostic performance and has been demonstrated to be promising for tailoring supportive periodontal care. No information on the efficacy of combining motivational interviewing (MI) and the communication of the PerioRisk level on psychological outcomes and supragingival plaque control is currently available, however.
