TABLE OF CONTENTS

Preface	i
Acknowledgement	iii
Editor	iv
Table of Content	v
1. Computational Intelligence in Robust Control: A Review	1
R. Akmeliawati and S. M. Raafat	
2. Real-Coded Moga For Intelligent Control Of A Flexible Manoeuvring System	28
S. F. Toha and M. O. Tokhi	
3. Optimized LQR Controller Synthesis For 3DOF Helicopter Using Multi-Objective Differential Evolution (MODE)	57
I. B. Tijani, R. Akmeliawati, A. Legowo, A. G.A. Muthalif	
4. PSO-Based Robust Controller Design For A Rotary Inverted Pendulum Stabilization	89
M. I. Solihin, R. Akmeliawati, A. Legowo	
5. Design And Application Of Intelligent Fuzzy Controller On A Quarter Car Suspension System	113
Md. Mahbubur Rashid	
6. Intelligent Robust Control for Precise Tracking Performance of X-Y Positioning System	147
S. M. Raafat and R. Akmeliawati	

Chapter 2

REAL-CODED MOGA FOR INTELLIGENT CONTROL OF A FLEXIBLE MANOEUVRING SYSTEM

Abstract

This chapter describes the implementation of real-coded multi-objective genetic algorithm (RCMOGA) for intelligent control of a flexible manoeuvring system. One of the main underpinning of the intelligent control is the ability to use biological intelligence to perform control task and achieved automation. RCMOGA is used to reduce system vibration as well as to meet several design objectives and associated goal as demanded in a practical application. The optimisation technique determines a set of solutions for the amplitudes and corresponding time locations of impulses on an extra sensitive (E) command shaping as well as gain parameters for the PID controller. The effectiveness of the proposed technique is assessed both in the time domain and the frequency domain. Moreover, a comparative
