Table of Content

Chapter 1 Preparation and Characterization of Thermoplastic Natural Rubber (TPNR) Nanocomposites <i>Noor Azlina Hassan, Sahrim Hj. Ahmad, Rozaidi Rasid and Norita Hassan</i>	1
Chapter 2 Polymer Clay Nanocomposites: Part I <i>Noor Azlina Hassan and Norita Hassan</i>	6
Chapter 3 Effect of Processing Parameters on the Tensile Properties of TPNR Reinforced Short Carbon Fibre Composite <i>Hazleen Anuar, Sahrim Hj. Ahmad and Rozaidi Rasid</i>	11
Chapter 4 Effect of Maleic Anhydride Polyethylene on Damping Properties of HDPE/EPDM Nanocomposite <i>Hazleen Anuar, Nur Ayuni Jama, and Shamsul Bahri Abdul Razak</i>	16
Chapter 5 Comparative Study on the Effect of Plasticizer on Thermal Properties of Polylactic Acid <i>Hazleen Anuar and Muhammad Rejaul Kaiser</i>	22
Chapter 6 Quality of Copper Film Electroplated on Silicon Wafer Using Different Current Densities <i>Shahjahan Mridha</i>	28
Chapter 7 Laser Nitriding of Titanium <i>Shahjahan Mridha</i>	39
Chapter 8 Composite Coating on Titanium Alloy Using High Power Laser <i>Shahjahan Mridha</i>	45

Chapter 9		
Measurement of Moisture Absorption in Borophosphosilicate Glass (BPGS) Films		50
	<i>Shahjahan Mridha and Shiau Khee Tang</i>	
Chapter 10		58
The Effect of Processing Parameter on Tensile Properties of Thermoplastic Natural Rubber Nanocomposites		
	<i>Noor Azlina Hassan, Sahrim Hj. Ahmad, Rozaidi Rasid and Norita Hassan</i>	
Chapter 11		64
Comparison of Mechanical Properties Between Untreated and Sulphuric Acid Treated Short Carbon Fiber Reinforced Thermoplastic Natural Rubber (TPNR) Composite		
	<i>Noor Azlina Hassan, Norita Hassan, Sahrim Hj. Ahmad and Rozaidi Rasid</i>	
Chapter 12		69
Water Absorption of TPNR Reinforced Short Carbon Fibre Composite		
	<i>Hazleen Anuar, Sahrim Hj. Ahmad and Rozaidi Rasid</i>	
Chapter 13		74
Enhanced Tensile Strength with Sulphuric Treated Short Carbon Fibre		
	<i>Hazleen Anuar, Sahrim Hj. Ahmad and Rozaidi Rasid</i>	
Chapter 14		79
Effect of Fibre Length on Tensile Properties of TPNR-Kenaf Fibre Composite		
	<i>Hazleen Anuar, Sahrim Hj. Ahmad and Rozaidi Rasid</i>	
Chapter 15		84
Effect of Nanoclay on Mechanical Properties of PLA-Clay Nanocomposite		
	<i>Hazleen Anuar and Muhammad Rejaul Kaiser</i>	
Chapter 16		90
Extraction of Glucose From Kenaf Core by Using Chemical Pre – Treatment Process		
	<i>Nurhafizah Seeni Mohamed, Hazleen Anuar, Maizirwan Mel, Rashidi Othman, Nur Aisyah Mohd Norddin, Nur Aimi Mohd Nasir, Mohd Adlan Mustafa Kamalbhrrin</i>	
Chapter 17		96
Wear of Nitride Coating Produced by Ti-Al Melt Synthesis in Nitrogen Environment		
	<i>Shahjahan Mridha</i>	
Chapter 18		103
Effect of Dispersant on Protein Foaming-Consolidation Porous Alumina Containing Hydrothermal Derived Hydroxyapatite Nanopowder		
	<i>Iis Sopyan and Ahmad Fadli</i>	

Chapter 19	109
Effect of Yolk Addition on Protein Foaming-Consolidation Porous Alumina-Calcium Phosphate Composites	
	<i>Iis Sopyan and Ahmad Fadli</i>
Chapter 20	115
Investigation of the Effect of Starch Addition on Protein Foaming-Consolidation Porous Alumina Containing Hydroxyapatite Nanopowder	
	<i>Ahmad Fadli', Iis Sopyan, Nur Syahidah and Nur Nadia</i>
Chapter 21	120
The Influence of Hydroxyapatite Loading on Protein Foaming-Consolidation Porous Alumina Sintered at 1300°C	
	<i>Ahmad Fadli 'and Iis Sopyan</i>
Chapter 22	126
High Density Polyethylene (HDPE) as an Alternative Material in Fuel Tank Production	
	<i>Afiqah Afdzahuddin and Md Abdul Maleque</i>
Chapter 23	132
Porous Alumina-Hydroxyapatite Composites via Protein Foaming-Consolidation Method: Effect of HA Loading on Physical Properties	
	<i>Iis Sopyan, Ahmad Fadli and Nur Izzati Zulkifli</i>
Chapter 24	137
Preparation and Characterisation of Low Density Polyethylene/Layered Silicate Nanocomposites	
	<i>Salina Sharifuddin , Iskandar Idris Yaacob</i>
Chapter 25	144
Effects of Sodium Dodecyl Benzene Sulphonate (NaDBs) on Li Imide-PMMA Based Solid Polymer Electrolyte	
	<i>Fauziah Mohd Yusof and Iskandar Idris Yaacob</i>
Chapter 26	149
Effect of Milling Time on Mechanochemically Synthesized Nanohydroxyapatite Bioceramics	
	<i>Iis Sopyan, S. Adzila and M. Hamdi</i>
Chapter 27	
Morphological Analysis of Mechanochemically Synthesized Nanohydroxyapatite Bioceramics	155
	<i>Iis Sopyan, S. Adzila and M. Hamdi</i>
Chapter 28	160
Sodium Doped Nanohydroxyapatite Bioceramics through Mechanochemical Synthesis	
	<i>S. Adzila, Iis Sopyan and M. Hamdi</i>

Chapter 29	165
Thermal Profile Analysis of Composite Brake Rotor	
<i>Md Abdul Maleque and Abdul Mu'min Adebisi</i>	
Chapter 30	172
The Effect of Fibre Content on Thermal Property of Coir Fibre Reinforced Cement-Albumen Composite	
<i>Faridatul Faezah Razali, Nur Humairah Abdul Razak and Zuraida Ahmad</i>	
Chapter 31	178
Pulsed Electrodeposition	
<i>Suryanto</i>	
Chapter 32	184
Electroless Nickel Based Coatings From Solution Containing Sodium Hypophosphite	
<i>Suryanto</i>	
Chapter 33	189
Characterization and Utilization of Fly Ash	
<i>Suryanto</i>	
Chapter 34	195
Workability of Coir Fibre- Reinforced Cement-Albumen Composite	
<i>Nur Humairah Abdul Razak and Zuraida Ahmad</i>	
Chapter 35	201
Preparation of Rice Husk for Raw Material of Silicon	
<i>Hadi Purwanto and Nor Fazilah Mohd Selamat</i>	

Laser Nitriding of Titanium

Keywords: Surface hardening, Laser melting, Nitrogen environment, Titanium nitride, Dendrite Hardness

Abstract. The modification of titanium surface by the application of a high power CO₂ laser in reactive environments is discussed. This process is commonly identified as laser nitriding when scanning is under nitrogen environments. In this process, the laser beam is scanned to melt a single track on titanium surface under nitrogen environment using different combinations of processing conditions producing a hard structure of titanium nitride. The new surface can have a composition quite different from the base metal. The properties of the treated surface are completely different from the matrix. This laser nitriding can tailor the properties of titanium to suite the service requirements.

Introduction

Titanium and its alloys have good corrosion resistance and high specific strength but poor wear resistance property which limits their use in many dynamic applications. The laser nitriding, a current 'high tech' method for tailoring surface properties of components made of titanium to meet specific requirement is discussed here. The surface modification by laser nitriding process causes compositional change and phase transformation resulting in significant property modification in the titanium material. Since only the surface of the part is affected, the bulk properties of the material remain unaffected. It is no longer a sound theory to heat treat an entire part for one small wear resistance surface or to make an item from superior quality and costly materials if only a small area needs the specific properties. This is the conceptual basis for the laser nitriding of titanium sheet discussed in this work and it represents a cost competitive procedure for generating wear resistance surface compared to conventional bulk processing.

Experimental Procedure

Many series of experiments were performed using a 5 kW CO₂ laser at AEA Culham Laboratory, Abingdon, England. The laser nitriding was applied by scanning the beam on commercial purity titanium substrate surfaces. The laser treatment of the titanium plate under nitrogen environment was limited to the formation of hard titanium nitride phase and some phase changes in the liquid melt zone. The titanium plate samples were in the form of 160 mm by 50 mm with a thickness of 3 mm. The surfaces of the samples were abraded on emery paper down to 220 grit size and subsequently laser treated. The laser treatment was done at different combinations of mixture of nitrogen-helium, nitrogen-argon or pure nitrogen environments, varying gas flow rates, laser scanning speeds, beam power and defocused distances. Effect of spinning was equally investigated by spinning the 1.35 kW beam at 1500 rpm over 4 mm locus under 100% N environment at different energy intensities. The detailed process conditions of the investigation are presented in Table 1. The laser treated samples were subsequently etched for 2 mins in a solution of 10 cm³ of hydrofluoric acid, 30 cm³ of nitric acid and 50 cm³ of water. The microstructure and hardness of the
