Biotechnologies towards Sustainable Development in Malaysia

Zarina Zainuddin

IIUM Press
# Table of Contents

Chapter 1 Bioethics and biotechnology: A holistic approach in Islamic perspectives  
Ahmed Jalal Khan Chowdhury, Zaima Azira Zainal Abidin, Zarina Zainuddin and Suzannah Abdul Rahman  

Chapter 2 Malaysia's Sea Cucumber (Echinodermata: Holothuroidea) Database  
Kamarul Rahim Kamarudin  

Chapter 3 Diversity and Exploitation of Sea Cucumbers in Malaysia and Its Neighbouring Countries  
Kamarul Rahim Kamarudin  

Chapter 4 *Holothuria (Mertensiosthuria) leucospilota* (Brandt, 1835) in the Marine Environment of Malaysia  
Kamarul Rahim Kamarudin  

Chapter 5 Genetic manipulation for better bioremediation processes  
Noor Faizul Hadry Nordin  

Chapter 6 Microbial bioremediation and sustainable development  
Noor Faizul Hadry Nordin  

Chapter 7 Heavy metal uptakes by plants  
Phang Ing Chia  

Chapter 8 Mechanisms of heavy metal tolerance in plants (I) – Avoidance mechanisms  
Phang Ing Chia  

Chapter 9 Mechanisms of heavy metal tolerance in plants (I) – Tolerance mechanisms  
Phang Ing Chia  

Chapter 10 Identifying catalytic residues for peptidases: *in silico* perspective  
Noraslinda Muhamad Bunnori  

Chapter 11 Important considerations in qRT-PCR  
Phang Ing Chia
Chapter 12 Molecular approach of macroinvertebrates in tropical wetland, Lake Bera, Malaysia: Towards the assessment of ecosystem health
Nurhidayati Abdul Aziz, Ahmed Jalal Khan Chowdhury, Kamarul Rahim Kamarudin, Mohd Azmi Ambak and Najiah Musa

Chapter 13 Probiotic for sustainability protein source in Malaysia
Tengku Haziyamin Tengku Abdul Hamid

Chapter 14 Bacteriocin as safe antimicrobial agent
Tengku Haziyamin Tengku Abdul Hamid

Chapter 15 Review on marine actinomycetes
Zaima Azira Zainal Abidin

Chapter 16 Biotechnology potential tropical mangrove plant with special emphasis on Avicennia alba in Tanjung Lumpur, Pahang Malaysia
Ahmed Jalal Khan Chowdhury, Deny Susanti, and Nur Sazwi Binti Nordin

Chapter 17 Studies on agronomy, breeding and genetics of Stevia rebaudiana (Bertoni) in Malaysia
Raji Akintunde Abdullateef and Mohamad bin Osman

Chapter 18 Identification and characterization of Burkholderia pseudomallei serine and metallopeptidases
Norasilinda Muhamad Bunnori

Chapter 19 Analysis of xylene degradation by bacteria isolated from petroleum contaminated sites
Noor Faizul Hadry Nordin and Marni Farhani Mansor

Chapter 20 Bioadsorption of heavy metals from synthetic waste water by tropical rambutan seed
Ahmed Jalal Khan Chowdhury, Abul Bashar Mohammed Helal Uddin, Mohd Sufian Mohamad Shukri, Kamaruzzaman Yunus

Chapter 21 Chitin and chitosan from fresh water fish tilapia (Oreochromis niloticus) scale
Ahmed Jalal Khan Chowdhury, Nor Hafizah Zakaria, Tengku Haziyamin Tengku Abdul Hamid and Deny Susanti

Chapter 22 Chitin and chitosan from potential shrimps and crabs of Malaysia
Ahmed Jalal Khan Chowdhury, Suffi Nurul Husna, Deny Susanti, Akbar John and Kamaruzzaman Yunus
Chapter 23 Extraction of chitin and chitosan from Malaysian cephalopods “Sotong mengaban” (Sepioteuthis lessoniana) and “Sotong jarum” (Loligo vulgaris)
Ahmed Jalal Khan Chowdhury, Mohd Hazman Mohd Salleh, Deny Susanti, Akbar John and Jamaluddin Daud

Chapter 24 In Planta Agrobacterium tumefaciens transformation of MR 219 rice
Zaima Azira Zainal Abidin and Rabiah Abdul Wahab

Chapter 25 Optimisation of transformation system for chilli embryo (Capsicum annuum variety Kulai) using particle bombardment
Zarina Zainuddin and Rozilawati Mohamad Achil

Chapter 26 Screening of mangrove plants for gram negative antibacterial activity
Zarina Zainuddin and ‘Izzati Akmal Hasan

Chapter 27 Antibacterial activities of green and ripens banana peel (Musa, AA cv. Sucrier) in Malaysia
Ahmed Jalal Khan Chowdhury, Dina Fuad, Md. Tariqur Rahman and Akbar John

Chapter 28 Agglutinin and antibacterial activities in oyster, Chama pacifica plasma
Najiah Musa, Arief Izzaary Zamani, Ahmed Jalal Khan Chowdhury and Muhamad Hazwan Mat Tar, Nadirah Musa

Chapter 29 The effect of cooking methods on meat samples using PCR-RFLP analysis
Zaima Azira Zainal Abidin and Haryati Ithnin
Chapter 22
Chitin and chitosan from potential shrimps and crabs of Malaysia

*Ahmed Jalal Khan Chowdhury, Suffi Nurul Husna, Deny Susanti, Akbar John and Kamaruzzaman Yunus

*Corresponding author: jkchowdhury@ium.edu.my

Introduction

With better appreciation of biopolymers derived from marine organisms, there has been an increased interest in their biomedical and industrial applications. Some such important molecules are chitin, chitosan, oligosaccharides, and their derivatives, which have attracted significant interest in view of their broad range of applications, including in the biomedical, agricultural, food science, technological fields and in various industries. Chitin is a naturally abundant mucopolysaccharide, and is the second-most abundant natural biopolymer after cellulose. Nature produces approximately $10^{11}$ tons of chitin annually worldwide as a by-product, and industrial use has been estimated at 10,000 tons annually (Kurita, 2006). Chitin is a copolymer of N-acetyl-d-glucosamine and d-glucosamine units linked with $\beta$-(1-4) glycosidic bond, where N-acetyl-d-glucosamine units are predominant in the polymeric chain. The deacetylated form of chitin refers to chitosan. Chitin and chitosan can be found as supporting materials in many aquatic organisms, terrestrial organisms, and some microorganisms (Tokura and Tamura, 2007). Nowadays, commercially, chitins and chitosans are produced from bio-waste obtained from aquatic organisms. However, due to the industrial need of chitins and chitosans in massive quantity.
