# Table of Content

**Chapter 1**  
A Critical Review of Metal Matrix Composite Brake Rotor  
*Md Abdul Maleque*  
1

**Chapter 2**  
Technology of Moulding for Composite Auto Brake Rotor  
*Md Abdul Maleque*  
7

**Chapter 3**  
Fabrication of Nickel Aluminide (Ni$_3$Al) by Hot Isostatic Pressing (HIP)  
*Faizal Abu Zarim, Iraj Alaei, I.I. Yaacob*  
13

**Chapter 4**  
Investigation of Mechanically Alloyed Nd-Fe-B Powder  
*I.I. Yaacob and H.K. Jun*  
17

**Chapter 5**  
Synthesis And Characterization Of Nanocrystalline Ni$_3$Al Intermetallic Produced by Mechanical Alloying And Reaction Synthesis  
*R. Ismail and I.I. Yaacob*  
23

**Chapter 6**  
The Effect of Hard Nanofillers on Mechanical Properties of PVC Nanocomposites  
*Noorasikin Samat, Muhammad Alif Mohd Yusoff and Mohd Shahrul Rizal Bin Zakaria*  
29

**Chapter 7**  
Fatigue Fracture Mechanism of PVC/CaCO$_3$ nanocomposite  
*Noorasikin Samat, Alan Whittle and Mark Hoffman*  
34

**Chapter 8**  
Mechanical Behaviour of Eco Core Composite Sandwich Structure  
*Norhasnidawani Johari Saфиyah Hzwani Abd. Rahim and Zahurin Halim*  
40

**Chapter 9**  
Characteristics of Oil Palm Biomass via Mixture of Empty Fruit Bunch (EFB) Fiber and Mesocarp Fiber  
*Zahurin Halim, Nabiha Mohd Noh and Nurshazana Mohamad*  
45

**Chapter 10**  
Mechanical Behaviour of Oil Palm Empty Fruit Bunch (OPEFB) Albumen-Composites Concrete  
49
Afiqah Omar, Nur Humairah A. Razak and Zuraida Ahmad

Chapter 11
The Influence of Biopolymer and Natural Fiber on the Physical and Mechanical Properties of Cement Composite
Norshahida Sarifuddin and Zuraida Ahmad

Chapter 12
Thermal and Morphological Study of Biopolymer Cotton-Albumen Clay (BCAC) Composites
Zuraida Ahmad, Teoh Swin Le and Kumaran A/L Samannamuthaliar

Chapter 13
Effect of Compaction Time on the Properties of Coir Fiber Reinforced Cement-Albumen Composite
Amir Zakwan Roslin, Nur Humairah A. Razak and Zuraida Ahmad

Chapter 14
Oil Palm Empty Fruit Bunch (OPEFB) for Lightweight Composites Concrete
Afiqah Omar, Nur Humairah A. Razak and Zuraida Ahmad

Chapter 15
Fabrication of Metal Matrix Composite Automotive Brake Rotor (Part 1)
Md Abdul Maleque

Chapter 16
Fabrication of Metal Matrix Composite Automotive Brake Rotor (Part 2)
Md Abdul Maleque

Chapter 17
Wear of Aluminium Matrix Composite – Effects of Reinforcement Combination
Md Abdul Maleque and Rezaul Karim

Chapter 18
Mechanical Properties of Wood Plastic Composites
Ooi Chong Jin and Shahjahan Mridha

Chapter 19
Properties of Wood Fiber Reinforced Polypropylene Composite
Shahjahan Mridha and Nafis Sarwar Islam
Chapter 20
The effects of chemical and mechanical treatments on coir fibre to mechanical properties of coir-albumen-concrete

Zuraida Ahmad and Nurizan Omar

Chapter 21
Architecture of Chopped Fiber Glass in Plastic Composite Processed Under Different Loads

Ahmed Nazrin Md Idriss and Shahjahan Mridha

Chapter 22
Variation of Fiber Architecture on Loads applied in Fabrication of Epoxy/Woven Fiber Glass Composite

Ahmed Nazrin Md Idriss and Shahjahan Mridha

Chapter 23
Impact Behavior of Carbon/ Epoxy Composite in Moisture and Temperature environments

Shahjahan Mridha

Chapter 24
Impact Strength Behaviour of the Woven and Chopped Fiber Glass Composites at Different Temperatures

Ahmed Nazrin Md Idriss and Shahjahan Mridha

Chapter 25
An Investigation of Hybrid Composites Tubes Subjected to Quasi-Static Loading

Farrah Yusof and Zuraida Ahmad

Chapter 26
Mechanical Behaviour of Biopolymer Cotton Albumen Clay (BCAC) Composites

Teoh Swin Le, Kumaran A/L Samannamuthialiar and Zuraida Ahmad

Chapter 27
The Effect of Processing Parameters on Tensile Properties Empty Fruit Bunch (EFB) Fiber Reinforced Thermoplastic Natural Rubber Composites

Noor Azlina Hassan, Norita Hassan, Sahrim Hj. Ahmad and Rozaidi Rasid

Chapter 28
Manganese Doped Hydroxyapatite Powder through Hydrothermal Method

Asep Sofwan Fattuhman, Aliqap, Iis Sopyan and Nuur Izzati Mazmaa
Chapter 29
Synthesis and Characterization of Sol-Gel Method Derived Zinc Doped Hydroxyapatite Powder

*Asep Sofwan Faturohman Algap, Nor Hidayu and Iis Sopyan*

Chapter 30
Synthesis and Characterization of Nickel Iron–Silicon Nitride Nanocomposite

*Iskandar I. Yaacob*

Chapter 31
Fabrication of Nickel Aluminide Intermetallic-Alumina Nanocomposite

*Roslina Ismail and Iskandar I. Yaacob*

Chapter 32
Investigation on the Effect of Water Immersion on Cotton Albumen Composite

*Zahurin Halim, Zuraida Ahmad and Fauziah Md Yusof*

Chapter 33
Numerical and Experimental Investigation of Peel Strength of Composite Sandwich Structures

*Zahurin Halim, Shahnor Basri and Mohd Ramli Ajir*

Chapter 34
Finite Element Analysis of Interlaminar Stresses in Edge Delamination

Keywords: Wood plastic composite, Coupling agent, Strength, Accelerated marine test

Abstract: Wood fiber reinforced polypropylene composite samples have been fabricated using 30 wt% fiber of 250 μm and 100 μm sizes by extrusion and injection molding method. Chemically treated fibers with maleic anhydride polypropylene (MAH-PP) coupling agent were equally used to fabricate composite samples. The effect of the coupling agent on the characteristics of the composites is investigated by assessing their properties in terms of tensile strength, hardness and water absorption. As water absorption has a harmful effect on the mechanical properties of the samples, accelerated marine test was conducted to study the water absorption capabilities. The water absorption gives significantly reduction in sample processed with the chemically treated fibers. It is presumed that the coupling agent creates a surface layer on wood fibers which diminishes water permeability into the fibers. However, the 100 μm sized fiber filled samples shows higher water absorption compared to those samples fabricated with 250 μm size fibers.

Introduction

Natural fibers are promising reinforcements for thermoplastic composites due to their low weight and cost. Moreover the natural fibers are obtained from post industrial sources. Since price for plastic has risen sharply over the past few years, adding a natural fiber to plastic provides cost reduction and in some cases increases performance of fiber filled plastic products. For this reason the scopes of fiber reinforced composites with natural fillers are increasing compared to inorganic fiber [1]. The addition of 10 parts per hundred by weight of oil palm wood fiber in the glass fiber reinforced composite is reported to reduce weight by 10%, without changing the specific energy absorption and impact strength [2]. It has been suggested that fiber orientation and moisture content of fiber have an effect on the mechanical properties of the rubber wood fiber filled polypropylene composites [3]. The fibers are shown to be in close proximity with each other in the samples, preventing the plastic matrix to properly encapsulate them which generates larger voids in the composite system and thus weakening the wood plastic composite.

The major usage of plastic composites is in transportation followed by the combined usage in marine and corrosive environment [1]. However, corrosion and marine environment stability of wood plastic composite has not been thoroughly investigated. Manufacturers mostly rely upon some limited laboratory tests whose methodologies are useful for simulations but not to predict the service properties. Stark [4] investigated polymer composites filled with 20 and 40% wood fiber at varying relative humidity of 30, 65 and 90% respectively and observed that the 20% wood fiber composite absorbed just above 1.4% moisture. Whereas 9.0% moisture absorption was obtained with 40% wood fiber reinforced composite. Bledowski and Faruk [5] found that the wood fiber in plastic composite can easily allow the absorption of water. However, in case of MAH-PP treated fiber samples, water absorption decreased by 75% due to the encapsulation of the fiber with MAH-PP. They suggested that during mixing, MAH-PP reacts with the hydroxyl group of the wood fibers to form covalent bond which is more resistant to water penetration. The effect of MAH-PP coupling agent on hardness and water absorption of natural fiber filled plastic composites has been studied by Patil et al [6]. They observed that MAH-PP treated fiber composite samples swelled less water and the sample was twice harder than that with untreated fibers.
