# Table of Content

<b>Chapter 1</b>		<b>Page</b>
Amorphous Coating of Iron Nickel Alloy		<b>1</b>
		Suryanto
<b>Chapter 2</b>		
Characterization of Electroplated Nanocrystalline NiFe Alloy Films		<b>7</b>
		Yusrini Marita and Iskandar I. Yaacob
<b>Chapter 3</b>		
Corrosion Behavior of Zinc in Potassium Hydroxide Aqueous Solution		<b>13</b>
		Suryanto
<b>Chapter 4</b>		
Development of Carbon Doped TiO <sub>2</sub> Photocatalyst for Pigment Degradation		<b>19</b>
		Muh Rafiq Mirza Julaihi, Asep Sofwan Faturohman Alqap and Iis Sopyan
<b>Chapter 5</b>		
Dynamic Mechanical Analysis of Carbon Fibre Composites		<b>25</b>
		Hazleen Anuar, Sahrim Hj. Ahmad and Rozaidi Rasid
<b>Chapter 6</b>		
Effect of Composition on Phase Transformation of Iron-Platinum Nanoparticles		<b>31</b>
		Koay Mei Hye and Iskandar I. Yaacob
<b>Chapter 7</b>		
Effect of Nanosized Alumina Reinforcement in Intermetallic Nickel Aluminide on the Formation of $\gamma'$ Precipitates		<b>37</b>
		Roslina Ismail and Iskandar I. Yaacob
<b>Chapter 8</b>		
Effect of Sintering Temperature on Protein Foaming-consolidation Porous Alumina-tricalcium Phosphate Composites		<b>43</b>
		Ahmad Fadli and Iis Sopyan
<b>Chapter 9</b>		
Electrical Property of ITO Thin Film Deposited by Rf Magnetron Sputtering		<b>49</b>
		Agus Geter Edy Sutjipto, Nurul Hajar and Farah Diana
<b>Chapter 10</b>		
Electrochemical Study of Zinc Selenide Thin Films Prepared for Photovoltaic Applications		<b>55</b>
		Souad. A. Mohamad, A. K. Arof
<b>Chapter 11</b>		
Electrodeposited CdS / CdTe Solar Cells		<b>61</b>
		Souad. A. Mohamad
<b>Chapter 12</b>		
Fabrication of Biomass Pellet from Mesocarp Fiber		<b>65</b>
		Zahurin Halim and Nurshazana Mohamad
<b>Chapter 13</b>		
Fabrication of Kenaf Sandwich Panel		<b>68</b>
		Siti Khadijah Abdul Rahman and Zahurin Halim

<b>Chapter 14</b>		
Foam Impregnation Method for Artificial Bone Graft Application		<b>78</b>
: Study on the Effect of Drying Time	Fariza Abdul Rahman and Zuraida Ahmad	
<b>Chapter 15</b>		
Foam Impregnation Method for Artificial Bone Graft Application		<b>84</b>
: Study on the Effect of Sintering Temperature	Zuraida Ahmad and Fariza Abdul Rahman	
<b>Chapter 16</b>		
FTIR Analysis - Aluminium Hydroxide Treated with Silane Coupling Agent		<b>89</b>
	Noorasikin Samat, Nor Suhaila Nor Saidi and Muhammad Saffuan Sahat	
<b>Chapter 17</b>		
Inorganic / Organic /Inorganic Double Junction Thin Film Solar Cells		<b>92</b>
	Souad. A. Mohamad	
<b>Chapter 18</b>		
Investigation on The Effect of Ultra Violet on Cotton Albumen Composite		<b>96</b>
	Zahurin Halim , Zuraida Ahmad and Fauziah Md Yusof	
<b>Chapter 19</b>		
Measurement of Oxygen Permeability in Bulk Alloys by Internal Oxidation of Dilute Constituent		<b>100</b>
	Mohd Hanafi Bin Ani and Raihan Othman	
<b>Chapter 20</b>		
Natural Dye Coated Nanocrystalline Tio <sub>2</sub> Electrode Films for DSSCs		<b>106</b>
	Souad. A. Mohamad and Iraj Alaci	
<b>Chapter 21</b>		
Normal Deposition to Anomalous Deposition		<b>109</b>
	Suryanto	
<b>Chapter 22</b>		
Polymer Clay Nanocomposites: Part II- Synthesis of Polymer Nanocomposites		<b>115</b>
	Noor Azlina Hassan, Norita Hassan	
<b>Chapter 23</b>		
Production of Porous Calcium Phosphate Ceramics through Polymeric Sponge Method		<b>120</b>
	Asep Sofwan Faturohman Alqap, Nur Ain Rakman, and Iis Sopyan	
<b>Chapter 24</b>		
Silicone Doped Calcium Phosphate Powder Synthesized via Hydrothermal Method		<b>126</b>
	Asep Sofwan Faturohman Alqap, Iis Sopyan and Zuria Farhana Kushaili	
<b>Chapter 25</b>		
Stress Analysis of Backend Metallization		<b>132</b>
	Iskandar I. Yaacob and Goh Chia Lan	
<b>Chapter 26</b>		
Study on Metal Removing from Alumina Ceramics		<b>137</b>
	Agus Geter Edy Sutjipto and Muhyiddin Bin Budah@Udah	

<b>Chapter 27</b>		
Surface Quality of <i>Dipterocarpus Spp</i> under Tropical Climate Change: Effect of Pre-Weathering		<b>146</b>
	Mohd Khairun Anwar Uyup, Hamid Hamdan, Paridah Mat Tahir, Hazleen Anuar, Noorasikin Samat, Siti Rafidah Mohamed	
<b>Chapter 28</b>		
Surface Topography of Sulphuric Treated Carbon Fibre		<b>151</b>
	Hazleen Anuar, Sahrim Hj. Ahmad and Rozaidi Rasid	
<b>Chapter 29</b>		
Synthesis and Characterization of Electrodeposited Iron-Platinum Nanostructured Thin Films		<b>157</b>
	Seoh Hian Teh and Iskandar I. Yaacob	
<b>Chapter 30</b>		
Synthesis of Magnetic Nanoparticles in Water-in-Oil Microemulsions		<b>164</b>
	Iskandar I. Yaacob	
<b>Chapter 31</b>		
The Effect of R-ratio on Fatigue Crack Propagation in Plasticised PVC and Modified PVC		<b>170</b>
	Noorasikin Samat, Alan Whittle and Mark Hoffman	
<b>Chapter 32</b>		
The Effect of R-ratio on Fatigue Crack Propagation in Un-plasticized PVC and Modified PVC		<b>175</b>
	Noorasikin Samat, Alan Whittle and Mark Hoffman	
<b>Chapter 33</b>		
Thin Film of Indium Tin Oxide and Its Deposition Technology Deposition		<b>180</b>
	Agus Geter Edy Sutjipto, Sugrib Kumar Shaha	
<b>Chapter 34</b>		
X-ray Photoelectron Studies on the Surface Chemical States of Yttria-Stabilized Zirconia Thin Film in Aqueous Acid Hydrofluoric		<b>186</b>
	Sukreen Hana Herman, Mohd Hanafi Ani, and Susumu Horita	
<b>Chapter 35</b>		
ZnO / Polymer Junction Growth for Hybrid Solar Cell Applications		<b>194</b>
	Souad. A. Mohamad	

## Normal Deposition to Anomalous Deposition

**Keywords:** Electrodeposition, Zinc-nickel alloy, Anomalous co-deposition.

**Abstract.** Zinc-nickel alloys were electrodeposited from a sulphate based electrolyte. The effect of deposition current density on alloy composition was determined for an electrolyte containing 0.58 mol/l nickel sulphate and 0.92 mol/l zinc sulphate. At current densities exceeding 0.01 A/dm<sup>2</sup>, a transition from normal deposition to anomalous co-deposition (i.e. where the less noble metal deposits preferentially) was observed and alloys rich in zinc were obtained. The transition current density was observed to increase with an increase in electrolyte temperature or a decrease in electrolyte pH. The electrodeposition mechanism for zinc-nickel alloys in the transition region was studied in detail. The results were consistent with the suppression of nickel deposition due to the precipitation of zinc hydroxide on the cathode surface. This was supported by pH measurements made in the vicinity of the cathode where a rise in pH was detected as the transition current density was approached and exceeded the critical pH for zinc hydroxide precipitation.

### Introduction

Development of zinc alloys formed with relatively noble metals such as iron, cobalt and nickel has led to the commercial production of less active zinc base coatings with increased corrosion resistance. Electrodeposited zinc-nickel alloys have attracted the interest of the aerospace industry as a high level of corrosion resistance can be obtained with only moderate additions of the more expensive alloying metal being required.

Zinc can be alloyed with the iron-group metals by electrodeposition from aqueous solutions containing sulphates or chlorides. The electroplating of zinc-nickel alloys has been known. However, the mechanisms by which zinc-nickel alloys are deposited are less well understood. In the present work, the electrodeposition mechanisms of zinc-nickel alloys have been studied using acidic baths, employing galvanostatic and potentiodynamic polarisation techniques.

### Deposition

Electrolytes were prepared by dissolving zinc and nickel sulphates in distilled water. The desired nickel content range in the alloys for optimum corrosion resistance was most readily obtained with an electrolyte containing approximately 40%wt nickel. This electrolyte was prepared by dissolving 0.92 mol/l Zn and 0.58 mol/l Ni in distilled water and was used for subsequent studies into the effects of electrolyte temperature and pH. Electrolytes were prepared at pH 4.5 and were also acidified to pH 3.5 and below by additions of 0.5 mol/l sulphuric acid.
