Table of Content

Chapter 1 Upgrading of Laterite Ore by Reduction and Leaching <i>Hadi Purwanto and Pramusanto</i>	1
Chapter 2 Upgrading of Iron Sand by Magnetic Concentration and Reduction <i>Muta'alim, Hadi Purwanto, Nuryadi Saleh and Pramusanto</i>	7
Chapter 3 Microstructure and Mechanical Properties of Neutron Transmutation Doped of Silicon under Cf-252 Neutron Bombardment <i>Agus Geter Edy Sutjipto, Roslan Yahya</i>	16
Chapter 4 Effect of Stabilizer Addition on Crystal Formation of Zirconia Synthesize From Zircon Sand <i>Yuhelda Dahlan Hadi Purwanto, Nuryadi Saleh and Pramusanto</i>	20
Chapter 5 Upgrading of Iron-rich Laterite Ore Using Reverse Flotation <i>Hadi Purwanto, Mutaalim, Yuhelda Dahlan, Nuryadi Saleh and Pramusanto</i>	27
Chapter 6 Influences of Additives on Copper Film Quality and Gap Filling Capability of Plating Process <i>Shahjahan Mridha and Law Shao Beng</i>	34
Chapter 7 Grain Refining in AISI 430 Ferritic Stainless Steel Welds by Addition of Metal Powder <i>Shahjahan Mridha and Muhammed Olawale Hakeem Amuda</i>	41
Chapter 8 Grain Refinement Practices in Ferritic Stainless Steel Welds <i>Muhammed Olawale Hakeem Amuda and Shahjahan Mridha</i>	48
Chapter 9 Alloy Coating on Steel Surfaces by Melt Synthesis of Elemental Metal Powders <i>Shahjahan Mridha</i>	53

Chapter 10	59
Synthesis And Characterization of Lithium Manganese Copper Oxides for use in Lithium Rechargeable Cells	
<i>I.I. Yaacob, N. Kamarulzaman, and W.J. Basirun^f</i>	
Chapter 11	65
Influence of Grain Size on Magnetic Properties of Electroplated NiFe	
<i>Yusrini Marita and Iskandar Idris Yaacob</i>	
Chapter 12	70
Composite Coating on Titanium Alloy Using High Power Laser	
<i>Shahjahan Mridha</i>	
Chapter 13	75
The Tribological Behaviour of Al-Si Automotive Piston Material	
<i>Arifutzzaman and Md Abdul Maleque</i>	
Chapter 14	81
Conceptual Design of Folding Bicycle Frame with Light Weight Materials	
<i>Md Abdul Maleque and Mohd Nizam</i>	
Chapter 15	86
Reverse Engineering of Automotive Piston	
<i>Md Abdul Maleque and A. Arifutzzaman</i>	
Chapter 16	92
Recent Trend in Application of High Temperature Ferritic Fe-Cr Alloys in Power Plant	
<i>Mohd Hanafi Bin Ani and Raihan Othman</i>	
Chapter 17	98
Measurement of Oxygen Permeability in Bulk Alloys by Internal Oxidation of Dilute Constituent	
<i>Mohd Hanafi Bin Ani and Raihan Othman</i>	
Chapter 18	104
Recent Trend on Application of High Temperature Ferritic Fe-Cr Alloys in Solid Oxide Fuel Cells	
<i>Mohd Hanafi Bin Ani and Raihan Othman</i>	
Chapter 19	110
Principle of Solid Electrolyte Oxygen Sensor	
<i>Mohd Hanafi Bin Ani and Raihan Othman</i>	
Chapter 20	116
Surface Oxygen Potential on the Oxide Scale during High Temperature Oxidation of Fe-Cr Alloys at 1073 K	
<i>Mohd Hanafi Bin Ani and Raihan Othman</i>	

	<i>Mohd Hanafi Bin Ani and Raihan Othman</i>	
Chapter 21		121
Reverse Engineering for Automotive Fuel Tank		
	<i>Md Abdul Maleque and Atiqah Afdzaluddin</i>	
Chapter 22		127
The possibility of utilizing scanning electron microscope for materials characterization		
	<i>Agus Geter Edy Sutjipto</i>	
Chapter 23		135
Piezoelectricity of Zinc Oxide Thin film as Source of Energy for Sensor Applications		
	<i>Agus Geter Edy Sutjipto, Liyana Abdul Gafar and Nor Azyati Syazwina Roselan</i>	
Chapter 24		141
Study on Zinc Oxide Crystal Growth		
	<i>Agus Geter Edy Sutjipto, Liyana Abdul Gafar and Nor Azyati Syazwina Roselan</i>	
Chapter 25		147
Green Nanotechnology using SEM and AFM		
	<i>A.G.E. Sutjipto and R. Muhida</i>	
Chapter 26		155
The effect of Cobalt addition on structural and magnetic properties of electrodeposited Iron-Platinum nanocrystalline thin films		
	<i>Seoh Hian Teh¹, Iskandar Idris Yaacob</i>	
Chapter 27		163
Mechanochemical Synthesis of CeO ₂ Nanopowder using Planetary Ball Milling		
	<i>Iskandar I. Yaacob</i>	
Chapter 28		170
A Study on Double Junction Zinc Based/Polymer Thin Film Solar Cell		
	<i>S. A. Mohamad and A. K. Arof</i>	
Chapter 29		176
A Voltammetric Study of Zinc Telluride Thin Films Prepared for Photovoltaic Applications		
	<i>S. A. Mohamad and A. K. Arof</i>	
Chapter 30		181
Electrodeposition Technique for ZnO Semiconductor Thin Films Fabrication		
	<i>S. A. Mohamad</i>	
Chapter 31		186
Electroless Nickel Based Coatings From Solution Containing Sodium Hypophosphite		
	<i>Suryanto</i>	

Chapter 32 Aluminum Spray Coating for Corrosion Resistance of Steel	192
	<i>Suryanto</i>
Chapter 33 Electrodeposition of Alloys	198
	<i>Suryanto</i>
Chapter 34 Corrosion Behavior of Duplex Stainless Steel in Sea Water	204
	<i>Suryanto</i>
Chapter 35 Cathodic Protection of Underground Pipes	210
	<i>Suryanto</i>

Electrodeposition Technique for ZnO Semiconductor Thin Film Fabrication

Suoad A. Mohamad

Keywords: Electrodeposition technique, Thin films, ZnO semiconductors, Structural properties, Optical properties.

Abstract: Electrodeposition is emerging as a method for the synthesis of semiconductor thin films particularly group II-VI semiconductors. We report here our results in the preparation of ZnO films by potentiostatic electrodeposition. Zinc nitrate aqueous baths were employed for the preparation of the films on ITO conducting glass substrates. Scanning electron microscopy was employed for characterizing the films in terms of morphology. UV-VIS spectroscopy was used for determining the optical characteristics of the samples and XRD was used to determine the crystal structure of the films.

Introduction

Electrodeposition or electroplating is defined as the process in which the deposit of a (usually) thin layer (of metal) is formed upon a substrate (that is often, but not always, also a metal). The purpose of such process may be to enhance or change the appearance of the substrate and/or attributes (such as corrosion resistance). Examples of the use of this method include the deposition of gold or silver on jewelry and utensils, and the deposition of chrome on automobile parts. Electrodeposition is performed in a liquid solution called an electrolyte, otherwise referred to as the "chemical bath". The bath is a specially designed chemical solution that contains the desired metal dissolved in a form of submicroscopic positively charged ions. Additives may also be introduced in the bath to obtain smooth and bright deposits. The object that is to be plated is submerged into the electrolyte and is connected to the negative terminal of the power supply. The positively charged anode completes the electric circuit. A power source in the form of a battery or rectifier provides the necessary current. This type of circuit arrangement directs electrons into a path from the power supply to the cathode. In the bath the electric current is carried by the positively charged ions from the anode towards the negatively charged cathode. This enables the metal ions in the bath to migrate towards extra electrons that are located at or near the surface of the cathode. Finally, the metal ions are removed from the solution and are deposited on the surface of the object as a thin layer. The reaction in aqueous medium at the cathode therefore obeys Eq. 30.1
