# Table of Content

<b>Chapter 1</b> Upgrading of Laterite Ore by Reduction and Leaching <i>Hadi Purwanto and Pramusanto</i>	1
<b>Chapter 2</b> Upgrading of Iron Sand by Magnetic Concentration and Reduction <i>Muta'alim, Hadi Purwanto, Nuryadi Saleh and Pramusanto</i>	7
<b>Chapter 3</b> Microstructure and Mechanical Properties of Neutron Transmutation Doped of Silicon under Cf-252 Neutron Bombardment <i>Agus Geter Edy Sutjipto, Roslan Yahya</i>	16
<b>Chapter 4</b> Effect of Stabilizer Addition on Crystal Formation of Zirconia Synthesize From Zircon Sand <i>Yuhelda Dahlan Hadi Purwanto, Nuryadi Saleh and Pramusanto</i>	20
<b>Chapter 5</b> Upgrading of Iron-rich Laterite Ore Using Reverse Flotation <i>Hadi Purwanto, Mutaalim, Yuhelda Dahlan, Nuryadi Saleh and Pramusanto</i>	27
<b>Chapter 6</b> Influences of Additives on Copper Film Quality and Gap Filling Capability of Plating Process <i>Shahjahan Mridha and Law Shao Beng</i>	34
<b>Chapter 7</b> Grain Refining in AISI 430 Ferritic Stainless Steel Welds by Addition of Metal Powder <i>Shahjahan Mridha and Muhammed Olawale Hakeem Amuda</i>	41
<b>Chapter 8</b> Grain Refinement Practices in Ferritic Stainless Steel Welds <i>Muhammed Olawale Hakeem Amuda and Shahjahan Mridha</i>	48
<b>Chapter 9</b> Alloy Coating on Steel Surfaces by Melt Synthesis of Elemental Metal Powders <i>Shahjahan Mridha</i>	53

<b>Chapter 10</b>	59
Synthesis And Characterization of Lithium Manganese Copper Oxides for use in Lithium Rechargeable Cells	
<i>I.I. Yaacob, N. Kamarulzaman, and W.J. Basirun<sup>f</sup></i>	
<b>Chapter 11</b>	65
Influence of Grain Size on Magnetic Properties of Electroplated NiFe	
<i>Yusrini Marita and Iskandar Idris Yaacob</i>	
<b>Chapter 12</b>	70
Composite Coating on Titanium Alloy Using High Power Laser	
<i>Shahjahan Mridha</i>	
<b>Chapter 13</b>	75
The Tribological Behaviour of Al-Si Automotive Piston Material	
<i>Arifutzzaman and Md Abdul Maleque</i>	
<b>Chapter 14</b>	81
Conceptual Design of Folding Bicycle Frame with Light Weight Materials	
<i>Md Abdul Maleque and Mohd Nizam</i>	
<b>Chapter 15</b>	86
Reverse Engineering of Automotive Piston	
<i>Md Abdul Maleque and A. Arifutzzaman</i>	
<b>Chapter 16</b>	92
Recent Trend in Application of High Temperature Ferritic Fe-Cr Alloys in Power Plant	
<i>Mohd Hanafi Bin Ani and Raihan Othman</i>	
<b>Chapter 17</b>	98
Measurement of Oxygen Permeability in Bulk Alloys by Internal Oxidation of Dilute Constituent	
<i>Mohd Hanafi Bin Ani and Raihan Othman</i>	
<b>Chapter 18</b>	104
Recent Trend on Application of High Temperature Ferritic Fe-Cr Alloys in Solid Oxide Fuel Cells	
<i>Mohd Hanafi Bin Ani and Raihan Othman</i>	
<b>Chapter 19</b>	110
Principle of Solid Electrolyte Oxygen Sensor	
<i>Mohd Hanafi Bin Ani and Raihan Othman</i>	
<b>Chapter 20</b>	116
Surface Oxygen Potential on the Oxide Scale during High Temperature Oxidation of Fe-Cr Alloys at 1073 K	
<i>Mohd Hanafi Bin Ani and Raihan Othman</i>	

	<i>Mohd Hanafi Bin Ani and Raihan Othman</i>	
<b>Chapter 21</b>		121
Reverse Engineering for Automotive Fuel Tank		
	<i>Md Abdul Maleque and Atiqah Afdzaluddin</i>	
<b>Chapter 22</b>		127
The possibility of utilizing scanning electron microscope for materials characterization		
	<i>Agus Geter Edy Sutjipto</i>	
<b>Chapter 23</b>		135
Piezoelectricity of Zinc Oxide Thin film as Source of Energy for Sensor Applications		
	<i>Agus Geter Edy Sutjipto, Liyana Abdul Gafar and Nor Azyati Syazwina Roselan</i>	
<b>Chapter 24</b>		141
Study on Zinc Oxide Crystal Growth		
	<i>Agus Geter Edy Sutjipto, Liyana Abdul Gafar and Nor Azyati Syazwina Roselan</i>	
<b>Chapter 25</b>		147
Green Nanotechnology using SEM and AFM		
	<i>A.G.E. Sutjipto and R. Muhida</i>	
<b>Chapter 26</b>		155
The effect of Cobalt addition on structural and magnetic properties of electrodeposited Iron-Platinum nanocrystalline thin films		
	<i>Seoh Hian Teh<sup>1</sup>, Iskandar Idris Yaacob</i>	
<b>Chapter 27</b>		163
Mechanochemical Synthesis of CeO <sub>2</sub> Nanopowder using Planetary Ball Milling		
	<i>Iskandar I. Yaacob</i>	
<b>Chapter 28</b>		170
A Study on Double Junction Zinc Based/Polymer Thin Film Solar Cell		
	<i>S. A. Mohamad and A. K. Arof</i>	
<b>Chapter 29</b>		176
A Voltammetric Study of Zinc Telluride Thin Films Prepared for Photovoltaic Applications		
	<i>S. A. Mohamad and A. K. Arof</i>	
<b>Chapter 30</b>		181
Electrodeposition Technique for ZnO Semiconductor Thin Films Fabrication		
	<i>S. A. Mohamad</i>	
<b>Chapter 31</b>		186
Electroless Nickel Based Coatings From Solution Containing Sodium Hypophosphite

**Keywords:** Electroless deposition, Nickel, Coating

**Abstract:** Electroless deposition is a valuable technique to deposit coatings with excellent thickness, wear and corrosion resistance. This technique can coat not only metallic materials but also non metallic materials such as plastics and rubber. Coatings can be tailored by selecting the composition of the coating alloy to suit specific requirements. The application of these coatings is expanding fast. In the present chapter, an attempt has been made to discuss electroless coatings with respect to bath containing sodium hypophosphite, coating composition and properties. Discussion also extended to the characteristic of various electroless nickel-based coatings after heat treated at various temperatures.

## Introduction

Electroless coating is a method of depositing metals or alloys by using chemical energy within the materials, known as a autocatalytic reduction method. By the controlled chemical reduction reaction, the electroless coating has emerged as one of the important method in surface engineering and metal finishing. Electroless coating has unique physicochemical and mechanical properties for which they are being used increasingly.

The advantage of using the autocatalytic reduction reaction is in maintaining overall uniformity of coating in composition and thickness which is independent of the thickness variations of the substrate. The other valuable properties are: excellent corrosion resistance, very good wear and abrasion resistance, high hardness, nanocrystalline and low coefficient of friction. Most applications of the electroless coating are based on their wear and corrosion resistance. However, the characteristic like high hardness and low coefficient of friction have a great potential in daily life applications.

Different alloys are coated for desired physical and mechanical properties. Several binary and ternary alloys have been deposited such as Ni-P [1], Ni-B [2], Co-P, Co-B [3], Ni-Co-P [4], Ni-W-P [5], and Fe-Sn-B, Fe-W-B, Fe-Mo-B [6]. Nickel turns out to be the single most widely coated element with phosphorous. Apart from nickel, many alloys contain at least one of the elements Co, Fe, Cu, and Au.

## Deposition

Electroless alloy coatings are produced by the controlled chemical reduction of metallic ions onto a surface and the reaction continues as long as the surface remains in contact with the
