Advanced Machining Process

Table of Contents

<i>Preface</i>	<i>ii</i>
<i>Acknowledgement</i>	<i>iii</i>
<i>Copyright</i>	<i>iv</i>
<i>PART 1: ELECTRO DISCHARGE MACHINING</i>	<i>1</i>
Chapter 1	2
Tool Wear rate during Electrical Discharge Machining (EDM) with Eccentric Electrode <i>Ahsan Ali Khan, Affendi Bin Saad and Mohd Zulfadli Isma Bin Mohd Isa</i>	
Chapter 2	7
Wear Ratio and Work Surface Finish during Electrical Discharge Machining (EDM) with Eccentric Electrode <i>Ahsan Ali Khan, Affendi Bin Saad and Mohd Zulfadli Isma Bin Mohd Isa</i>	
Chapter 3	12
Role of Current, Voltage and Spark on-time on Electrode Material Migration during EDM <i>Ahsan Ali Khan, Nurul Shima Mohd Noh</i>	
Chapter 4	18
A Study on Material Removal Rate during EDM with Tantalum Carbide-Copper Compacted Electrode <i>Ahsan Ali Khan, Mohammad Azhadi Bin Mohammad Hambiyah and Mohd Faiz Bin Nazi Nadin</i>	
Chapter 5	23
Features of EDM of Mild Steel with Ta-Cu Powder Compacted Electrodes <i>Ahsan Ali Khan, Mohammad Azhadi Bin Mohammad Hambiyah and Mohd Faiz Bin Nazi Nadin</i>	
Chapter 6	28
Relationship between Machining Variables and Process Characteristics during Wire EDM <i>Ahsan Ali Khan, M. B. M. Ali and N. B. M. Shaffiar</i>	

Chapter 7		33
	Influence of Machining Parameters on Surface Roughness during EDM of Mild Steel	
	<i>Ahsan Ali Khan, Erry Y.T. Adesta and Mohammad Yeakub Ali</i>	
Chapter 8		38
	Machining of Ceramic Materials: A Review	
	<i>Abdus Sabur, Md. Abdul Maleque and Mohammad Yeakub Ali</i>	
Chapter 9		44
	Formation of Micro-cracks and Recast Layer during EDM of Mild Steel using Copper Electrodes	
	<i>Ahsan Ali Khan, Erry Y.T. Adesta and Mohammad Yeakub Ali</i>	
Chapter 10		49
	Features of Electrode Wear during EDM of Mild Steel with TaC-Cu Powder Compacted Electrodes	
	<i>Ahsan Ali Khan, Mohd Faiz Bin Nazi Nadin and Mohammad Azhadi Bin Mohammad Hambiyah</i>	
Chapter 11		54
	Influence of Current, Spark On-time and Off-time on Electrode Wear during EDM of Mild Steel	
	<i>Ahsan Ali Khan, Mohd Faiz Bin Nazi Nadin and Mohammad Azhadi Bin Mohammad Hambiyah</i>	
Chapter 12		59
	A Comparative study on Work Surface Hardness EDMed by Ta-C Powder Compacted and Copper Electrodes	
	<i>Ahsan Ali Khan, Mohd Faiz Bin Nazi Nadin and Mohammad Azhadi Bin Mohammad Hambiyah</i>	
Chapter 13		65
	An Introduction to Electrical Discharge Machining	
	<i>Ahsan Ali Khan and Mohammed Baba Ndaliman</i>	
Chapter 14		70
	Developments in EDM Process Variables	
	<i>Ahsan Ali Khan, Mohammed Baba Ndaliman and Mohammad Yeakub Ali</i>	

PART 2: MICROMACHINING	76
Chapter 15	77
Focused Ion Beam Micromachining: Technology and Application <i>Israd Hakim Jaafar, Nur Atiqah, Asfana Banu, Mohammad Yeakub Ali</i>	
Chapter 16	83
Finish Cut of Titanium Alloy using Micro Electro Discharge Milling for Nano Surface Finish <i>Mohammad Yeakub Ali, Muhamad Faizal, Asfana Banu, and Nur Atiqah</i>	
Chapter 17	89
Investigation of MRR for Finish Cut of Titanium Alloy using Micro Electro Discharge Milling <i>Mohammad Yeakub Ali, Mohd Saifuddin, Nur Atiqah, and Asfana Banu</i>	
Chapter 18	95
Investigation of TWR for Finish Cut of Titanium Alloy using Micro Electro Discharge Milling <i>Mohammad Yeakub Ali, Mohd Saifuddin, Nur Atiqah, and Asfana Banu</i>	
Chapter 19	101
Investigation of Chip Formation and Minimum Chip Thickness in Micro/Meso Milling: Methodology and Design of Experiment <i>Mohammad Yeakub Ali, Noor Adila Mansor and Siti Hamizah Mass Duki</i>	
Chapter 20	107
Micro/Meso Milling of Aluminium Alloy 1100: Analysis and Modelling of Minimum Chip Thickness <i>Mohammad Yeakub Ali, Noor Adila Mansor and Siti Hamizah Mass Duki</i>	
Chapter 21	113
Effect of Micro End Milling Tool Diameter on Minimum Chip Thickness <i>Mohammad Yeakub Ali, Noor Adila Mansor and Siti Hamizah Mass Duki</i>	
Chapter 22	119
Micro Wire Electrical Discharge Machining of Tungsten Carbide: Methodology and Procedure <i>Mohammad Yeakub Ali, Ahmad Chaaban Elabtah and Musab Jamal Alrefaie</i>	
Chapter 23	124
Micro Wire Electrical Discharge Machining of Tungsten Carbide: Analysis of Surface Roughness <i>Mohammad Yeakub Ali, Ahmad Chaaban Elabtah and Musab Jamal Alrefaie</i>	
Chapter 24	130
Micro Wire Electrical Discharge Machining of Tungsten Carbide: Analysis of Material Removal Rate <i>Mohammad Yeakub Ali, Musab Jamal Alrefaie and Ahmad Chaaban Elabtah</i>	
Chapter 25	136
Micro Electro Discharge Machining of Micro Pillar Array: Process	

Chapter 25		136
	Micro Electro Discharge Machining of Micro Pillar Array: Process Development	
	<i>Mohammad Yeakub Ali, Wan Emira Azaty and Nor Suriza</i>	
Chapter 26		142
	Micro Electro Discharge Machining of Micro Pillar Array: Analysis of Surface Finish	
	<i>Mohammad Yeakub Ali, Wan Emira Azaty and Nor Suriza</i>	
Chapter 27		148
	Micro Electro Discharge Machining of Micropillar Array: Analysis of Material Removal Rate	
	<i>Mohammad Yeakub Ali, Nor Suriza and Wan Emira Azaty</i>	
Chapter 28		154
	Vibration Issue in Micro End Milling	
	<i>Mohammad Yeakub Ali, Muhamad Lutfi and Mohamad Ismail Fahmi</i>	
Chapter 29		159
	Fabrication of Micro Filter by Electro Discharge Machining	
	<i>Abdus Sabur and Mohammad Yeakub Ali</i>	

PART 3: PRECISION MACHINING	165
Chapter 30	166
High Speed Milling of Mould Steel using 1.5mm-diameter End-mills <i>Mohamed Konneh, Khairunnisa Ahmad and Rose Fazleen</i>	
Chapter 31	172
Precision Grinding of Silicon Carbide using 46 μm Grain Diamond Cup Wheel <i>Mohamed Konneh and Ahmad Fauzan</i>	
Chapter 32	178
Precision Grinding of Silicon Carbide using 76 μm Grain Diamond Cup Wheel <i>Mohamed Konneh and Mohd Shukur Zawawi</i>	
Chapter 33	184
Precision Grinding of Silicon Carbide using 107 μm Grain Diamond Cup Wheel <i>Mohamed Konneh and Mohd Fadzil</i>	
Chapter 34	190
Investigation of Surface Integrity during Precision Grinding of Silicon Carbide using Diamond Grinding Pins <i>Mohamed Konneh, Mohamad Lutfi and Mohamad Shahrilnizam</i>	
Chapter 35	196
A Comparative Study on Flank Wear and Work Surface Finish during High Speed Milling of Cast Iron with Different Carbide Tools <i>Ahsan Ali Khan, Zuraida Aman Nor Rasid and Izausmawati Yusof</i>	

Precision Grinding of Silicon Carbide Using 107 μm Grain Diamond Cup Wheel

Keywords: Silicon Carbide, ductile-mode machining, 107 μm grain cup wheel, surface roughness

Abstract. Grinding of Silicon Carbide (SiC) has been found difficult to be machined since the material is typically hard and brittle. Ductile mode machining has been developed to produce the better result of surface roughness for ground and brittle materials like SiC. Ductile mode grinding of brittle material has been and will continue to be in research area because of its increasing industrial applications. This project presents a study of precision surface grinding of SiC with varying machining parameters by employing ductile mode machining. The work-piece material was ground using a 107 μm cup wheel with aim of producing fracture-free surfaces of the ground work-piece material. The machining parameters chosen for the grinding process of SiC are depth of cut, feed rate and speed of the spindle. These parameters are used to explore the effects of the machining parameters on the machining characteristics, surface roughness and surface integrity.

Introduction

Hard and brittle materials are difficult to machine as they have high hardness and low toughness characteristics. Hard and brittle materials include Si, SiC, Aluminium oxide, zirconium oxide. Extensive research work has shown that diamond is the most suitable material used to machine hard and brittle materials since it has hardness that will provide wear resistance. Silicon carbide has low density, high strength, low thermal expansion, high thermal conductivity, high hardness, high elastic modulus, excellent thermal shock resistance, superior chemical inertness.

Advanced ceramic such as silicon carbide (SiC) is a carbon and silicon chemical compound. For over hundred years, SiC has been produced and made into grinding wheel because of its excellent abrasive. This SiC is produced by high temperature electro-chemical reaction of sand and carbon. It has good resistance to wear, thermal shock, and corrosion. It has also has low friction coefficient, and it retains high strength at elevated temperatures. SiC is a type of ceramic and belongs to the class of hard and brittle material. Therefore machining it poses a real problem due to its low fracture toughness, making it very sensitive to crack. The efficient grinding of high performance ceramic involves the selection of appropriate operating parameters to maximize the material removal rate (MRR) while maintaining the low surface finish and limiting surface damage. Ceramics have very low fracture toughness, very sensitive to crack, so it is essential to distinguish which method should be used during machining the work piece. Venkatesh, V.C and Izman, S. [1] stated that machining of hard and brittle materials always poses problems. Blau et.al [2] mentioned that grinding can be classify as one of the most sophisticated machining process . Sanjay
