Building Technology and Engineering Kulliyyah of Architecture
and Environmental Design International Islamic University
Malaysia

IIUM Press
Contents

Part -1  Construction Technology and Engineering  
Chapter 1  A Concept of Shear for Wall for the Design of High-Rise Buildings Constructions  
Muhammad Abu Eusuf Ph. D  
Chapter 2  Influential Factors and Structural Reliability  
Muhammad Abu Eusuf Ph. D  

Part -2  Construction Management  
Chapter 3  Managing Construction Projects through Shared Online Calendar- 
Maisarah Ali, Mohd Saiful Rizal bin Yusoff  
Chapter 4  Risk Management in Construction Projects in Malaysia  
Maisarah Ali, SamsulBahrin Osman  

Part-3  Construction and Environment  
Chapter 5  The Campus Weather Observation for Environmental Monitoring  
Muhammad Abu Eusuf Ph. D  
Chapter 6  Assessment of Linkage between Natural Ventilation, Thermal Comfort and Urban Morphology of a Semi-Open Plaza in the Hot-Humid Climate  
Puteri Shireen Jahn kassim Ph. D, Navid Razeghpahah  
Chapter 7  A Method of Assessment and Organisational Database of Green Materials for Sustainable Buildings in the Tropics - A Focus on Healthcare Facilities  
Puteri Shireen Jahn kassim Ph. D, Khairusy Syakirin Has-Yun Hashim  
Chapter 8  Towards the Zero Energy House - A Comparison of Bioclimatic Strategies and Thermal Comfort Issues in Two Differing Climates  
Puteri Shireen Jahn Kassim Ph. D  
Chapter 9  The Concepts of Man and the Environment in Islam: Implications for Sustainability in Islamic Architecture  
Spahic Omer Ph. D

96  
110
Part 4  Construction Ethics  124
Chapter 10 Islamic Domestic Courtyards as an Avenue to peaceful Coexistence with the Environment  125
Spahic Omer Ph. D
Chapter 11 The Role of Spirituality in Islamic Housing: Some Observations  135
Spahic Omer Ph. D
Part 5  Construction Miscellaneous  148
Chapter 12 The Development of Fire Risk Assessment Method for Heritage Building  149
Md. Najib Ibrahim, Khirani Abdul Hamid, Mohd Shariffuddin Ibrahim, Azrin Mohd Din, Rodzyah Mohd Yunus, Mohamad Ridzuan Yahya,
Chapter 13 Fire Risk Assessment of Heritage Building – Perspectives of Regulatory Authority, Restorer and Building Stakeholder  162
Md. Najib Ibrahim, Mohd Shariffuddin Ibrahim, Azrin Mohd Din, Khirani Abdul Hamid, Rodzyah Mohd Yunus, Mohamad Ridzuan Yahya,
Chapter 14 Effectiveness of Substation Monitoring System  168
Maisarah Ali, Zainoddin Azahari
A METHOD OF ASSESSMENT AND ORGANISATIONAL DATABASE OF GREEN MATERIALS FOR SUSTAINABLE BUILDINGS IN THE TROPICS
- A focus on healthcare facilities

Keywords: indoor environmental quality, low emittance materials, green specification, product research, green database

ABSTRACT

Sustainable design and construction represents the integration of materials and methods that, together, create the physical manifestation of a building. In response to mounting evidence that buildings through their life cycle are significant causes of human illness and environmental degradation, the paper discusses how the healthcare sector representing a substantial share of annual design and construction activities in Malaysia. This sector is well-positioned to highlight the potential that buildings have to reverse environmental decline and to create environments for people that enhance health, patient outcomes, and workplace performance. Its purchasing power can lead to industry partnerships to improve the health and environmental profiles of buildings. The paper summarizes the outcome of a study of the implementation of sustainable materials in terms of materials and indoor environmental quality for a proposed 300 bed hospital. The incorporation of green products and materials was outlined as part and parcel of improved indoor environmental quality goals and represents a part of the Malaysian Public Works Department (PWD)'s attempt to produce overall, sustainable healing environment serving a rapidly growing suburban area. The findings are presented and discussed i.e. from the evaluation of the proposed materials based on IEQ and recycled content – to examining the contents and components of the materials, and assessing them based on established benchmarks such as the Leadership of Energy and Environmental Design (LEED) system by USGBC. Through an assessment evaluation based on low-emittance requirements and recycled content in all
