Section 1 Buckling

1 Cylindrical Shell Buckling Under Axial Compression Load	3
<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
2 Experimental Setup of Empty and Water Filled Cylindrical Shell Buckling	8
<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
3 Experimental Results of Empty and Water Filled Cylindrical Shell Buckling	13
<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
4 Experimental Results of Empty and Water Filled Cylindrical Shell Buckling for 50mm Stroke	18
<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
5 Experimental Results of Empty and Water Filled Cylindrical Shell Buckling for 60mm Stroke	24
<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
6 Simulation Setup of Empty and Water Filled Cylindrical Shell Buckling	30
<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
7 Simulation Results of Empty and Water Filled Cylindrical Shell Buckling	35
<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
8 Experimental and Simulation Results of Cylindrical Shell Buckling	41
<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
9 Buckling and Crush Analysis of Light Weight Structure	48
<i>Kassim A. Abdullah and Wan Nur Hidayah Wan Sulaiman</i>	
10 Analysis of Lightweight Structural Tubes for Crashworthy Car Body	54
<i>Kassim A. Abdullah and Zahra Roslan</i>	

Section 2 Impact

11 Pipe Whip Impact	61
<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
12 Experimental Setup of Pipe Whip Impact	66
<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	

13	Experimental Results of Pipe Whip Impact	71
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
14	Simulation Setup of Pipe Whip Impact	77
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
15	Simulation Results of Pipe Whip Impact at 55° Angle	82
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
16	Simulation Results of Pipe Whip Impact at 90° Angle	87
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
17	Failure Mechanism of PC Armor Plates with PMMA Sacrificial Layer Subjected to Impact	93
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
18	Damage of Polycarbonate Armor Plate Subjected to Impact	106
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
19	Finite Element to Predict Damage of a Polycarbonate Armor Plate Subjected to Impact	112
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
20	Energy Absorbing Capability of Materials Subjected to Impact Under Gravity Loading	120
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
21	Damage Assessment of Liquid Filled Container Subjected to Free Fall on Rigid Steel Plate	127
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
22	Numerical Analysis of Materials Energy Absorbing Capability Under Gravity Loading Impact ..	134
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
23	Numerical Assessment of Liquid Filled Container Subjected to Free Fall on Rigid Steel Plate	141
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	

Section 3 Design and Manufacturing

24	Overview of the Powder Metallurgy Process	151
	<i>Meftah Hrairi, Asmu'i Hussi, Fadzly Mohamad Ravi</i>	
25	Mechanical Properties of Sintered Aluminum Alloy Compacts	156
	<i>Meftah Hrairi, Fadzly Mohamad Ravi</i>	
26	Numerical Simulation of Green Compacts	161
	<i>Meftah Hrairi, Asmu'i Hussin</i>	
27	Experimental Studies of Dieless Forming	167
	<i>Meftah Hrairi, Saiful Mazwan Nawi</i>	
28	Study of Spot Welding Process	172
	<i>Meftah Hrairi, Fatimah Jamil</i>	
29	General Framework for Inverse Identification of Consecutive Parameters	177

Meftah Hrairi

30	Inverse Parameter Identification of Elastic and Inelastic Constitutive Material Models	183
	<i>Meftah Hrairi</i>	
31	Enhancing Magnetic Particle Testing of Automotive Parts	189
	<i>Meftah Hrairi, Salah Echrif</i>	
32	Design and Fabrication of the Testing Model of the Vehicle Structure Test System	196
	<i>Kassim A. Abdullah and Cheah Siew Loong</i>	
33	Design Analysis of Laminated Composite Ladder Chassis Frame of Light Truck	202
	<i>Kassim A. Abdullah and Mohd Zaimi bin Rosli</i>	
34	Design and Development of Driving System for Disabled Driver	208
	<i>Kassim A. Abdullah, J.S. Mohamed Ali, Mohd Azlan bin Habeeb Rahmathullah, Ruzael Amir Afendi b. Kaharuddin</i>	

Section 4 Liquid Sloshing

35	Liquid Sloshing	215
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
36	Experimental Study of Liquid Slosh Dynamics in a Half Filled Cylindrical Tank	220
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
37	Experimental Results of Liquid Slosh in a Cylindrical Tank with Different Fill Levels	226
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
38	Simulation Model of 3D Liquid Slosh in a Partially Filled Cylindrical Tank	233
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
39	Simulation Results of Liquid Slosh in a Partially Filled Cylindrical Tank	238
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
40	Numerical and Experimental Results of Liquid Slosh in a Partially Filled Cylindrical Tank	242
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>

EXPERIMENTAL RESULTS OF EMPTY AND WATER FILLED CYLINDRICAL SHELL BUCKLING

Qasim H. Shah, Hasan M. Abid, Adib B. Rosli

1. INTRODUCTION

The objective of this experiment is to find out the types and properties of the material used in this study. This can be known by measuring the mechanical properties and observing the characteristics of the material. The most fundamental strengths of a material are the yield strength and ultimate tensile strength. Therefore, the relation between stress and strain becomes an important characteristic of the material. A tensile test can determine a stress-strain diagram of the material. Then the experimental results will be compared with numerical simulation results.

An aluminum alloy can was placed at the middle of a Universal Testing Machine. The upper part will move downward and compress the can with constant speed until a desired stroke. This machine is connected to a computer to run the INSTRON program. Then, the deformation of the cans due to the axial compression applied is observed. The test was divided into three parts which used empty, half-, and fully-filled containers. Also, the compression rate for every test was varied from 10mm/min to 500mm/min to see the different deformations according to the changes. In the experiment, empty and water filled circular cylindrical cans have been loaded under axial compression using a Universal Testing Machine. The graph of load and stroke was obtained from collected data. The presence of water which is an incompressible fluid in the water filled cans gave greater resistance to the cans before complete collapse when compared to the
