Section 1 Buckling

1	Cylindrical Shell Buckling Under Axial Compression Load	3
	<i>Qasim H. Shah, Hasan M. Abid, Abid B. Rosli</i>	
2	Experimental Setup of Empty and Water Filled Cylindrical Shell Buckling	8
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
3	Experimental Results of Empty and Water Filled Cylindrical Shell Buckling	13
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
4	Experimental Results of Empty and Water Filled Cylindrical Shell Buckling for 50mm Stroke	18
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
5	Experimental Results of Empty and Water Filled Cylindrical Shell Buckling for 60mm Stroke	24
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
6	Simulation Setup of Empty and Water Filled Cylindrical Shell Buckling	30
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
7	Simulation Results of Empty and Water Filled Cylindrical Shell Buckling	35
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
8	Experimental and Simulation Results of Cylindrical Shell Buckling	41
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
9	Buckling and Crush Analysis of Light Weight Structure	48
	<i>Kassim A. Abdullah and Wan Nur Hidayah Wan Sulaiman</i>	
10	Analysis of Lightweight Structural Tubes for Crashworthy Car Body	54
	<i>Kassim A. Abdullah and Zahra Roslan</i>	

Section 2 Impact

11	Pipe Whip Impact	61
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
12	Experimental Setup of Pipe Whip Impact	66
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	

13	Experimental Results of Pipe Whip Impact	71
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
14	Simulation Setup of Pipe Whip Impact	77
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
15	Simulation Results of Pipe Whip Impact at 55° Angle	82
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
16	Simulation Results of Pipe Whip Impact at 90° Angle	87
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
17	Failure Mechanism of PC Armor Plates with PMMA Sacrificial Layer Subjected to Impact	93
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
18	Damage of Polycarbonate Armor Plate Subjected to Impact	106
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
19	Finite Element to Predict Damage of a Polycarbonate Armor Plate Subjected to Impact	112
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
20	Energy Absorbing Capability of Materials Subjected to Impact Under Gravity Loading	120
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
21	Damage Assessment of Liquid Filled Container Subjected to Free Fall on Rigid Steel Plate	127
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
22	Numerical Analysis of Materials Energy Absorbing Capability Under Gravity Loading Impact ..	134
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
23	Numerical Assessment of Liquid Filled Container Subjected to Free Fall on Rigid Steel Plate	141
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	

Section 3 Design and Manufacturing

24	Overview of the Powder Metallurgy Process	151
	<i>Meftah Hrairi, Asmu'i Hussi, Fadzly Mohamad Ravi</i>	
25	Mechanical Properties of Sintered Aluminum Alloy Compacts	156
	<i>Meftah Hrairi, Fadzly Mohamad Ravi</i>	
26	Numerical Simulation of Green Compacts	161
	<i>Meftah Hrairi, Asmu'i Hussin</i>	
27	Experimental Studies of Dieless Forming	167
	<i>Meftah Hrairi, Saiful Mazwan Nawi</i>	
28	Study of Spot Welding Process	172
	<i>Meftah Hrairi, Fatimah Jamil</i>	
29	General Framework for Inverse Identification of Consecutive Parameters	177

Meftah Hrairi

30	Inverse Parameter Identification of Elastic and Inelastic Constitutive Material Models	183
	<i>Meftah Hrairi</i>	
31	Enhancing Magnetic Particle Testing of Automotive Parts	189
	<i>Meftah Hrairi, Salah Echrif</i>	
32	Design and Fabrication of the Testing Model of the Vehicle Structure Test System	196
	<i>Kassim A. Abdullah and Cheah Siew Loong</i>	
33	Design Analysis of Laminated Composite Ladder Chassis Frame of Light Truck	202
	<i>Kassim A. Abdullah and Mohd Zaimi bin Rosli</i>	
34	Design and Development of Driving System for Disabled Driver	208
	<i>Kassim A. Abdullah, J.S. Mohamed Ali, Mohd Azlan bin Habeeb Rahmathullah, Ruzael Amir Afendi b. Kaharuddin</i>	

Section 4 Liquid Sloshing

35	Liquid Sloshing	215
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
36	Experimental Study of Liquid Slosh Dynamics in a Half Filled Cylindrical Tank	220
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
37	Experimental Results of Liquid Slosh in a Cylindrical Tank with Different Fill Levels	226
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
38	Simulation Model of 3D Liquid Slosh in a Partially Filled Cylindrical Tank	233
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
39	Simulation Results of Liquid Slosh in a Partially Filled Cylindrical Tank	238
	<i>Qasim H. Shah, Hasan M. Abid, Adib B. Rosli</i>	
40	Numerical and Experimental Results of Liquid Slosh in a Partially Filled Cylindrical Tank	242

MECHANICAL PROPERTIES OF SINTERED ALUMINUM ALLOY COMPACTS

Meftah Hrairi, Fadzly Mohamad Ravi

1. INTRODUCTION

Aluminum alloy A356 is used in automotive transmission cases, water cooled cylinder blocks, pistons, connecting rods, and also other moderate strength components [1]. Pistons are made from materials having properties such as high compressive strength and high hardness in order to handle the high temperature and pressure produced in the cylinder while combustion strokes take place. Pistons also need to have high corrosive resistance because they are exposed to highly combustible air and fuel mixtures. The reciprocating piston that goes up and down in motion also needs to be very wear resistant in order to maintain a longer life cycle of the piston. Based on the experimental study conducted in this work, the A356 produced parts using the P/M process seem to have better mechanical properties than similar parts produced using the conventional permanent mold cast process. This A356 material can also be applied to make the engine valves which require very similar characteristics to the piston.

In the current study, the advantages of the P/M process over a conventional mold cast process that can be applied to produce automotive parts is being investigated. The mechanical properties of the A356 alloy such as the compressive strength, Vickers hardness, and relative density, have been determined experimentally and compared to those of a component manufactured using the permanent mold cast process.

2. EXPERIMENTAL PROCEDURE

A356 used in the present investigation is a cast aluminum alloy that has Si 6.76%, Mg 0.38%, Fe 0.14%, and others less than 0.05% by weight. This alloy has good weldability, corrosion resistance, and resistance to hot cracking and solidification shrinkage. The A356 powder was shaped and compacted at a pressure of 3 tons (2000 psi) for 10 minutes using a uniaxial press. Cylindrically shaped specimens of
