Chapter 9  
  Optimization of an integrated solar heat-pump system ....................................................................... 60  
  M.N.A. Hawlader and Ye Shaochun  
Chapter 10  
  Comparative study of performance characteristics using Jatropha Oil Methyl Esters  
  Biodiesel and Diesel ................................................................................................................................. 69  
  A.K.M. Mohiuddin and Azan Mohd  
Chapter 11  
  Comparative Study of Emission Characteristics using Jatropha Oil Methyl Esters Biodiesel  
  and Diesel ................................................................................................................................................ 74  
  A.K.M. Mohiuddin and Azan Mohd  
Chapter 12  
  Waste Cooking Oil Utilization for Biodiesel Production ..................................................................... 79  
  A.K.M. Mohiuddin and Nabeel Adeyemi  
Chapter 13  
  Flow Characteristic of Mixing Impeller for Liquid-Liquid Mixing ....................................................... 85  
  A.K.M. Mohiuddin and Nabeel Adeyemi  
Chapter 14  
  Solar Energy Management for Poverty Alleviation and Income Generating Activities ......... 91  
  A.K.M. Mohiuddin  

v
Chapter 15
Turbulence model for axial mixing impeller in unbaffled vessel................................. 97
A.K.M. Mohiuddin, Nabeel Adeyemi and Muhamad Husaini

Chapter 16
Optimization and economic analysis of a solar assisted heat pump drying system........ 103
M.N.A. Hawlader, S. M. A. Rahman and K.A. Jahangeer

Chapter 17
A solar heat pump water heater for rural hospitals.................................................. 117
M.N.A. Hawlader and M. Zakir Ullah

Chapter 18
A solar heat-pump system for air-conditioning, water heating and drying.................. 126
M.N.A. Hawlader, K A Jahangeer, Ye Shaochun and Choy Tack Hoon

Chapter 19
Engineering design – An approach to the development of creativity.......................... 132
M.N.A. Hawlader

Chapter 20
Analysis of Engine Performance with NGV.............................................................. 140
Sany Izan Ihsan, Nabila Sulaiman, AKM Mohiuddin and Maizirwan Mel

Chapter 21
Analysis of Engine Performance with Enhanced Fuel.............................................. 147
Sany Izan Ihsan, Khairussani Farid, Maizirwan Mel, and AKM Mohiuddin

Chapter 22
CFD analysis of an evacuated solar still..................................................................... 156
Ahmad F. Ismail, Mirghani I. Ahmed, Yousif A. Abakr

Chapter 23
Developments on Solar Operated Water Desalination.............................................. 163
Mirghani I. Ahmed, Yousif A. Abakr and Ahmad F. Ismail

Chapter 24
Theoretical and experimental evaluation of LPG as refrigerant for domestic refrigerators
and freezers.............................................................................................................. 169
M.M. El-Awad, M.I. Ahmed

Chapter 25
Preliminary investigation of biodiesel reactor optimization using combine CFD-Taguchi
method...................................................................................................................... 179
A.K.M. Mohiuddin and Nabeel A Adeyemi

Chapter 26
Alternative mixing strategy for biodiesel production: mixed flow impeller characterization
......................................................................................................................... 188
A.K.M. Mohiuddin and Nabeel Adeyemi

Chapter 27
Experimental Investigation of a Multistage Evacuated Solar Still.............................. 197
Yousif A. Abakr, Ahmad F. Ismail and Mirghani I. Ahmed

Chapter 28
Modelling of electronics heat sink – Influence of the wake function generation on the
accuracy of CFD analysis....................................................................................... 203
M. I. Ahmed, A. F. Ismail, Y. A. Abakr

Chapter 29
The effect of the operating conditions on the apparent viscosity of crude palm oil during
separation............................................................................................................... 213
Sulaiman Al-Zuhair, Yousif A. Abakr and Mirghani I. Ahmed
Chapter 30
Thermal analysis of a micro device used for detection of colorectal cancer.......................... 220
Mirghani I. Ahmed, Meftah Hrairi

Chapter 31
Performance of different photovoltaic cells operating under the meteorological conditions
of Singapore................................................................................................................................ 229
M.N.A Hawlader, Lee Poh Seng and Chua Kok Kiang

Chapter 32
Analyses of motion and drag coefficient of water droplets in a natural draught cooling
tower............................................................................................................................................. 240
Liu Baomin and M. N. A. Hawlader

Chapter 33
A solar assisted heat pump system for desalination................................................................. 252
Zakaria Mohd. Amin, M N A Hawlader and Azharul Karim

Chapter 34
Comparative study of combustion characteristics using Jatropha oil methyl esters biodiesel
and diesel........................................................................................................................................ 261
A.K.M. Mohiuddin and Azan Mohd

Chapter 35
Performance of evaporator collector and air collector in a solar assisted heat pump dryer.
.................................................................................................................................................... 269

Abstract

This paper describes a method of economic optimization of an integrated solar heat pump system for space cooling, water heating and drying. The system can serve three functions simultaneously or independently. A simulation model for this system was developed to study the influence different variables. The results were validated by a series of experiments carried out under the meteorological conditions of Singapore. Based on this simulation model, an economic optimization was performed to identify the best collector size for a given load and its distribution, using two methods, life cycle savings (LCS) and payback period. The load pattern is determined based on a typical small hotel with the air-con room area of 500m², daily hot water demand of 18m³ and daily drying demand of 90 kg. It was seen that the life cycle saving method lead to the prediction of the optimum collector area of 55 m². The payback period analyses predicted the optimum collector area of 50 m². The minimum payback period is about 1.5 years.

Keywords: optimization, solar, heat-pump, evaporator-collector, life cycle savings, payback period

INTRODUCTION

Solar energy is clean and most inexhaustible of all known energy resources. Solar systems are normally characterized by a high initial investment followed by low operating cost. The initial investment and operating cost are dependent upon the system design. Therefore, system optimization is necessary to maximize the economical advantage of solar systems compared with conventional ones.

The combination of solar energy and heat pump system can bring various thermal applications. Hawlader et al.[1] used refrigerant 134a in the heat pump for water heating application and the evaporator was used as a solar collector leading to a significant improvement in system COP. Hawlader et al.[2] also developed a solar-assisted heat-pump dryer and water heater. The COP of the system was about 5.0 to 7.0. The first 3-in-1 solar heat pump system for space cooling, water heating and drying was developed by
