Table of Content

PREFACE	v
EDITOR	vi
SECTION 1: INTELLIGENT CONTROL SYSTEM	5
Chapter 1	6
Working Principle and Operating Mode of Atomic Force Microscopy Iskandar Al-Thani Mahmood	
Chapter 2	13
Design and Development of controller of Active Power Filter for Industrial Usage part 1 M.M.Rashid ¹ , N.A.Ramin ² and Zahurul ²	
Chapter 3	21
Design and Development of controller of Active Power Filter for Industrial Usage part 2 M.M.Rashid ¹ , N.A.Ramin ² and Zahurul ²	
Chapter 4	30
Design and Implementation of Instant Noodles Vending Machine M.M.Rashid	
Chapter 5	39
Development of Intelligent Belt Conveyor System (Part 1) M. M. Rashid, Faruok Alliays	
Chapter 6	45
Development of Intelligent Belt Conveyor System M.M.Rashid, Faruk, M J E Salami	
Chapter 7	50
Anti Skid Control System, A Tutorial M. J. E. Salami, A. M. Aibinu, A. F. Salami and Mohd Sofian Bin Basrah	
Chapter 8	54
Design and Prototyping of Inertia Wheel W. Astuti, A. R. Kasim, M. I. Solihin, A.M. Aibinu, Momoh Jimoh E.Salami and Wahyudi	
Chapter 9	62
Control of Automatic Drilling Machine by PLC Md Mozasser Rahman, Najiah Md Zain @Abdul Rahman and Mohd Syazwan Bin Jamil	
Chapter 10	74
Automatic Storage and Retrieval System Abdul Kadir Abdul Jabar Abdul Kadir, M. J. E. Salami and A. M. Aibinu	
Chapter 11	80
Control of Unmanned Underwater Vehicle Raisuddin Khan ^{1,a} , Faried Hasbullah ^{2,b} and Masum Billah ^{3,c}	
Chapter 12	85

Adaptive Sliding Mode Control for 3dof Helicopter Mostafa A. Hamood ^a , Rini Akmeliawati ^b	
Chapter 13	93
Backstepping Control of an Autonomous Quadrotor Norafizah Abas ¹ , Rini Akmeliawati ²	
Chapter 14	103
Piezoelectric Tube Scanner in Atomic Force Microscope Iskandar Al-Thani Mahmood	
SECTION II : INTELLIGENT CONTROL SYSTEM DESIGN	111
Chapter 15	112
A Review on Control of Two-Wheeled Wheelchair System Salmiah Ahmad ^{1, a} , M. O. Tokhi ^{2, b}	
Chapter 16	121
A Smart Car Surveillance System using Programmable Logic Controller (PLC) Siti Fauziah Tohaa and Mohammad Zafran Haja Mohideen	
Chapter 17	128
Design of Controller for Elevator Group Using Fuzzy Logic Part 1 M.M.Rashid, Azhar	
Chapter 18	133
Design of Controller for Elevator Group Using Fuzzy Logic Controller Part 2 M.M.Rashid, Azhar	
Chapter 19	139
Fuzzy Logic-based Intelligent Control of Flexible Link Manipulator Ismaila B. Tijani and Rini Akmeliawati	
Chapter 20	148
EEG based robot control A. Khorshidtalab and M. J. E. Salami	
Chapter 21	158
Visual-Based Intelligent Solar Tracking System Rini Akmeliawati*, Samir A. Abdul Kareem, Riza Muhida	
SECTION III: INTELLIGENT SYSTEM DESIGN	172
Chapter 22	173
Intelligent Air-conditioning System Amir A. Shafie, Raisuddin Khan, H. Al-haieaid M. Ebrahim	
Chapter 23	179
An Intelligent Car Surveillance System: Design and Tools Selection Siti Fauziah Toha ³ and Mohammad Zafran Haja Mohideen	
Chapter 24	185
Automatic Pipe Bursting Monitoring System M. J. E Salami, Syed Ahmed @ Hla Moe Win	

Chapter 37	292
Kernel PCA – An Introduction	
Hamza Baali ^{1,a} , Momoh-Jimoh Eyiomika Salami ^{2,b} , Rini Akmeliawati ^{3,c}	
Chapter 38	297
System Modelling of a Twin rotor System: Time and Frequency Domain Analysis	
Siti Fauziah Toha ^{1,a} and M. O. Tokhi ^{2,b}	
Chapter 39	304
System Identification Technique for a Helicopter Using Genetic Algorithms	
Siti Fauziah Toha ^{1,a} and M. O. Tokhi ^{2,b}	
Chapter 40	311
Advanced Noise Removal Techniques for the Detection of EMG Signal	
Md. Rezwanul Ahsan ^{1,a} , Muhammad Ibn Ibrahimy ^{2,b} and Othman Omran Khalifa ^{3,c}	
Chapter 41	322
Active suspension system: Part 1 - Mathematical Modelling	
Aiman O. Bajaber ^a , Asan G. A. Muthalif ^b , Ayman S.I. Elzubair ^c	
Chapter 42	327
Active Suspension System: Part 2 - Controller Design and Simulation	
Ayman S.I. Elzubair ^a , Asan G. A. Muthalif ^b , Aiman O. Bajaber ^c	
Chapter 43	332
Book Shelving Robotics	
M. J. E. Salami ^{1,a} , Mohd Farid Md Alias ^{2,b} , Nurul Izzah Sidek ^{3,c} , Mohamed Mousa ^{4,d}	
Chapter 44	337
Model Structure and Random Input for System Identification Technique for Flexible Manipulating System	
Siti Fauziah Toha ^{1,a} and M. O. Tokhi ^{2,b}	
Chapter 45	344
Fault Tree Analysis, A case study of a simple Line Following Robot	
Abiodun Musa Aibinu, Haaris Ahmad Quadri, Mu Ham Mach A Mine, Almeahmadi Tarig Saeed S . And Hamide Rohimah	
Chapter 46	351
Review of Malaysian Traffic Summon and Payment system	
A. M. Aibinu, Sharifah Nadiah bt Syed Mohammad, Wan Nur Faezah bin Wan Azmi	

Chapter 5

Development of Intelligent Belt Conveyor System (Part 1)

M. M. Rashid, Faruok Alliays

Department of Mechatronics Engineering, Kulliyah of Engineering,
International Islamic University Malaysia, Malaysia

5.1 Introduction

A conveyor system is a common piece of mechanical handling equipment that moves materials from one location to another. Conveyors are especially useful in applications involving the transportation of heavy or bulky materials. Conveyor systems allow quick and efficient transportation for a wide variety of materials, which make them very popular in the material handling and packaging industries.

Conveyors is the example of material handling devices that were used by most factory as their effective ways in reducing the cost and time constraints. Conveyors are used to move material between locations using an arranged fixed path. Conveyors are fixed in terms of their locations and the conveyor belts according to their synchronized speeds, making any change over of the conveyor system very difficult and expensive (Material handling News, 1993, Modern Material Handling, 1986, Ho, 1991).

Conveyors are seen as ineffective and just typically use to move transport material, but once equipped with proper control system they yield efficient and safe plant operation. So, electronic intelligent conveyor control technology is very constructive for complex conveying task. In order to full fill the intelligent element at maximum places the simple relay control system with old style mechanical sensing devices is used. This system will take the all the constraints of old system and also having additional feature like fee rate control (Makarand Joshi, 2003).

According to Makarand Joshi (2003), the efficiency of the material handling is depends upon availability and reliability of conveyor system. A single conveyor can run at close to 100% reliability but as the number of conveyor increases the consistency of the conveyor system is mostly depend upon its control system. The control system should be capable to fulfill all the need of material operation. The existing systems are designed to take care of only conveyor stoppage due to conveyor zero speed and sequential operation. The existing system has sensing devices like zero speed sensing and receiving conveyor position sensing. It has also facility for selection to operate conveyor avoiding control system.

Conveyors are a broad class of material handling equipment capable of transporting goods along fixed paths. Although conveyor are the least flexible material handling equipment, the provide manufacturers with a cost-effective and reliable alternative. In order to meet the best specification in the material handling devices the manufacturer should used the best resolution that meet and cope with the product produced. Conveying equipment is generally classified as above-floor conveyors versus on-floor or over-head tow-line conveyors. Both classes allow horizontal and inclined conveying, while tow-line type conveyors also allow vertical conveying (Chryssolouris, 1993).

To produce the best production will need the most excellent material handling devices in order to response with the demanding product. Most assembly is set up according to the product flow layout using conventional conveyor systems. Above-floor conveyors have been classified as package handling conveyors due to their primary application of transporting cartons, pallets and totes. On the factory floor they are utilized in transport (palletized/fixture) work pieces likes engine blocks, gearboxes, household items and many more. It can carry materials from one assembly station to another in other to decrease man power used. In a
