## ABSTRACT

The emergence of electronic learning (e-learning) has further facilitated the wide adoption of learner-centered education and other changes in educational practices. Such benefits of e-learning are reduced education cost, consistency, timely content, flexible accessibility, and convenience. The present study provides brief description of e-learning, in addition, to the limitation, challenges, advantage and disadvantage of e-learning.

**Keywords:** Electronic Learning, E-learning, Learner-Centered Education, E-Education

## INTRODUCTION

Over the past few years, digital media have enriched the teaching and learning experiences and shift the learning process from teacher-centered to learner-centered education by emerging e-learning.

E-learning introduces a variety of learning styles and resolves time and locations which were addressed by many educational institutes. Many educational institutions are now offering innovative online degree programs, expanding their education without time and space barriers, and complementing their traditional offline class with web-based online educational tools.

Meanwhile, profit and non-profit organizations are increasingly replacing traditional offline job training with online training programs. They claim that online training saves training costs and enhances learning effectiveness by delivering high-quality training services. Current research aims to provide different definitions of e-learning to shed light on the tools that may help to construct e-learning solutions, as well as the advantages and disadvantages of the use of e-learning will be presented.
