ABSTRACT

The International Islamic University Malaysia (IIUM) is one of the biggest universities in the world. It has more than 14,000 local students and 3,000 international students. The main divisions in the university are Academic Management & Admission Division (formerly A&R) and the IIUM ALUMUNI which are responsible for the graduation ceremony of the students. The project intended to solve the problem of the attendance of the student's family members and friends, especially overseas students, to be in the convocation ceremony by developing a web-based online video streaming system for the graduation ceremony. It is proposed that the system will be added in the official web site of IIUM ALUMUNI. The web page will allow student's family members and friends to watch the video online rather than traveling.

13.1 Introduction

13.1.1 Background of the problem

With the rapid growth of the Internet and multimedia application in distributed environments, it is easier for digital data owners to transfer multimedia documents across the Internet. Furthermore, at the present time applications such as videoconferencing and desktop conferencing has become a daily characteristic of financial businesses as well as for individuals needs. As it saves time, effort, and travel expenses for organizations and individuals. Therefore for such application, security has become one of the most critical aspects of communications with the
