Chapter 11 Technique to Establish Microalgae into Pure Culture
Normawaty Mohammad-Noor & Mohamad Fuad Mohamad Anuar

Chapter 12 Media for Microalgae Culture
Normawaty Mohammad-Noor & Mohamad Fuad Mohamad Anuar

Chapter 13 Scanning Electron Microscopy
Normawaty Mohammad-Noor & Asilah Al-Has

Chapter 14 Making Seaweed Herbarium
Normawaty Mohammad-Noor

Part 2 Beach Profile and Sediment Characteristics

Chapter 15 Beach Profile
Shahbudin Saad

Chapter 16 Littoral Environmental Observation
Shahbudin Saad

Chapter 17 Grain-Size Analysis
Shahbudin Saad

Part 3 Coral Reef

Chapter 18 Suspended Sediment in Coral Reef Area
Shahbudin Saad

Chapter 19 Line Intercept Transect
Shahbudin Saad
Chapter 20 Coral Recruitment
Shahbudin Saad ................................................................. 127

Chapter 21 Coral Reef Fish Assemblages
Shahbudin Saad ........................................................................ 132

Chapter 22 Determination of Coral Cover (Coral Lifeforms) in Marine Environment
Mohamed Kamil Abdul Rashid ......................................................... 137

Part 4 Marine Pollution

Chapter 23 Determination of Aliphatic and Aromatic Hydrocarbons in Marine Environment
Mohamed Kamil Abdul Rashid ......................................................... 144

Chapter 24 Determination of Dissolved Inorganic Nitrogen (DIN) in Marine Environment.
Mohamed Kamil Abdul Rashid ......................................................... 151

Chapter 25 Water Sampling Techniques
Anies Aznida Sa’ari, Kamaruzzaman Yunus & Akbar John ......................... 158

Chapter 26 Determination of Fecal Coliform and Escherichia coli (E. coli) in Marine Environment
Mohamed Kamil Abdul Rashid ......................................................... 163

Chapter 27 Determination of Organochlorine Insecticides in Oyster and Marine Sediment
Mohamed Kamil Abdul Rashid ......................................................... 170

Chapter 28 Detection of Heavy Metals in Sediment and Biological Samples
Anies Aznida Sa’ari, Akbar John & Kamaruzzaman Yunus ......................... 179

Chapter 29 Laboratory Protocols - Sediment Sample Analysis
Anies Aznida Sa’ari, Kamaruzzaman Yunus & Akbar John ......................... 186
Chapter 30 Anodara granosa – A Potential Bioindicator in Coastal Waters of Langkawi Island, Malaysia
Kumaruzaman Yunus, Mohd Zahir Md Suhaimi, Fikriah Faudzi, Mohd Fuad Miskon & Akbar John .................................................................................................................. 195

Chapter 31 Bioaccumulation of Selected Metals in Commercially Important Marine Fishes from Selangor Coastal Waters, Malaysia
Kumaruzaman Yunus, Rina Sharlinda Zabri, Fikriah Faudzi, Mohd Fuad Miskon & Akbar John ........................................................................................................................................ 206

Part 5 Fish

Chapter 32 Larval Feeding Behavior and Sensory Organs
Yukinori Mukai........................................................................................................ 215

Chapter 33 Procedure of Histological Experiment
Yukinori Mukai........................................................................................................ 221
Chapter 24 Determination of Dissolved Inorganic Nitrogen (DIN) in Marine Environment

Mohamed Kamil Abdul Rashid

Institute of Oceanography and Maritime Studies, Kulliyyah of Science, International Islamic University Malaysia, Jalan Sultan Ahmad Shah, Bandar Indera Mahkota, 25200 Kuantan

Introduction

Nitrogen is a major nutrient element that required by plants and aquatic organisms to grow and survive (Garrison, 2005). It is one of the nutrient compounds that is commonly of great interest in environmental studies due to the ecological significance of its pollution (Suhaimi et al., 2004). The dissolved inorganic nitrogen (DIN) components exist in the form of nitrite, nitrate and ammonium in aquatic environment (Le Tissier et al., 2006). Nitrite is an intermediate form in the ammonium oxidation and in the nitrate reduction that occurs in wastewater treatment plants, water distribution system and natural waters (APHA, 1998). Nitrate is commonly found in groundwater and sometimes can reach aquifers by percolation of agricultural fertilizers, livestock manure and surface runoff (HDR/EES, 2007). Usually, it has a limited concentration in surface water, but sometimes it can reach in a high level in some groundwaters (APHA, 1998). Ammonium in surface water is increasing due to the wastewater effluents and surface water runoff from fertilized fields (HDR/EES, 2007).

Excessive nitrate concentrations in water will contaminate drinking of water, and may cause an illness called methemoglobinemia in infants (APHA, 1998). Nitrite and nitrate can pose a threat public health by affecting oxygen-carrying capacity of blood in infants that will cause serious illnesses, shortness of breath, blue skin and affect the spleen if exposed chronically (HDR/EES, 2007). Thus, the DIN components analyses are required to prevent these contamination and threat from occuring in the environments. These components in water samples are determined by using photometric methods in different analyses (Satyanarayana, 2007).
