Chapter 11 Technique to Establish Microalgae into Pure Culture
Normawaty Mohammad-Noor & Mohamad Fuad Mohamad Anuar.................................58

Chapter 12 Media for Microalgae Culture
Normawaty Mohammad-Noor & Mohamad Fuad Mohamad Anuar.................................63

Chapter 13 Scanning Electron Microscopy
Normawaty Mohammad-Noor & Asilah Al-Has.................................69

Chapter 14 Making Seaweed Herbarium
Normawaty Mohammad-Noor.................................................................74

Part 2 Beach Profile and Sediment Characteristics

Chapter 15 Beach Profile
Shahbudin Saad.................................................................80

Chapter 16 Littoral Environmental Observation
Shahbudin Saad.................................................................90

Chapter 17 Grain-Size Analysis
Shahbudin Saad.................................................................97

Part 3 Coral Reef

Chapter 18 Suspended Sediment in Coral Reef Area
Shahbudin Saad.................................................................113

Chapter 19 Line Intercept Transect
Shahbudin Saad.................................................................118
Chapter 20 Coral Recruitment
Shahbudin Saad .......................................................................................................................... 127

Chapter 21 Coral Reef Fish Assemblages
Shahbudin Saad .......................................................................................................................... 132

Chapter 22 Determination of Coral Cover (Coral Lifeforms) in Marine Environment
Mohamed Kamil Abdul Rashid ..................................................................................................... 137

Part 4 Marine Pollution

Chapter 23 Determination of Aliphatic and Aromatic Hydrocarbons in Marine Environment
Mohamed Kamil Abdul Rashid ..................................................................................................... 144

Chapter 24 Determination of Dissolved Inorganic Nitrogen (DIN) in Marine Environment.
Mohamed Kamil Abdul Rashid ..................................................................................................... 151

Chapter 25 Water Sampling Techniques
Anies Aznida Sa’ari, Kamaruzzaman Yunus & Akbar John ............................................................. 158

Chapter 26 Determination of Fecal Coliform and Escherichia coli (E. coli) in Marine Environment
Mohamed Kamil Abdul Rashid ..................................................................................................... 163

Chapter 27 Determination of Organochlorine Insecticides in Oyster and Marine Sediment
Mohamed Kamil Abdul Rashid ......................................................................................................... 170

Chapter 28 Detection of Heavy Metals in Sediment and Biological Samples
Anies Aznida Sa’ari, Akbar John & Kamaruzzaman Yunus .............................................................. 179

Chapter 29 Laboratory Protocols - Sediment Sample Analysis
Anies Aznida Sa’ari, Kamaruzzaman Yunus & Akbar John ............................................................. 186
Chapter 30 Anadara granosa – A Potential Bioindicator in Coastal Waters of Langkawi Island, Malaysia
Kumaruzzaman Yunus, Mohd Zahir Md Suhaimi, Fikriah Faudzi, Mohd Fuad Miskon & Akbar John .................................................................195

Chapter 31 Bioaccumulation of Selected Metals in Commercially Important Marine Fishes from Selangor Coastal Waters, Malaysia
Kumaruzzaman Yunus, Rina Sharlinda Zabri, Fikriah Faudzi, Mohd Fuad Miskon & Akbar John .................................................................206

Part 5 Fish

Chapter 32 Larval Feeding Behavior and Sensory Organs
Yukinori Mukai .............................................................................215

Chapter 33 Procedure of Histological Experiment
Yukinori Mukai .............................................................................221
Chapter 29 Laboratory protocols - Sediment sample analysis

Anies Aznida Sa’ari, Kamaruzzaman Yunus & Akbar John

Department of Biotechnology, Kulliyyah of Science, International Islamic University Malaysia, Jalan Sultan Ahmad Shah, Bandar Indera Mahkota, 25200, Kuantan Pahang, Malaysia

Introduction

Bottom sediments consist of particles that have been transported by water, air or glaciers from the sites of their origin in a terrestrial environment and have been deposited on the floor of a river, lake, or ocean. In addition to these particles, bottom sediments will contain materials precipitated from chemical and biological processes. Natural processes responsible for the formation of bottom sediments can be altered by anthropogenic activities. Many man-made materials have entered bodies of water through atmospheric deposition, runoff from land, or direct discharge into the water. Most hydrophobic organic contaminants, metal compounds, and nutrients, which enter the water become associated with particulate matter. This particulate matter then settles and accumulates in the bottom sediments. Under certain conditions the contaminants in the bottom sediments may be released back into water or enter the food chain. Consequently, bottom sediments are a sink as well as a source of contaminants in the aquatic environment. These contaminants may pose a high risk to the environment on a large scale and hence need to be monitored at regular intervals. Environmental monitoring includes sampling and analyses of the sediments.

Extensive surveillance, monitoring, and research activities are required to assess the extent and severity of sediment contamination, to evaluate the effects of contaminated sediments on freshwater and marine environment, and to prepare a plan for appropriate remedial action. In many reports on the investigations of sediments, a detailed description of sampling techniques is often overlooked. Sampling procedures often vary depending on the objectives of the monitoring, method of analysis and the need of the analyst. It is worthy to mention that analysis of sediments provides environmentally significant information.
