TABLE OF CONTENTS

Preface	i
Acknowledgement	ii
Editor	iii
Table of Content	v
1. Visual Tracking for Human Face A.A. Shafie, Iqbal and M.R. Khan	1
2. Robot Design : A Case Study of Team Learning Experience and Outcome A.A. Shafie	7
3. Development Neck Support for Humanoid Robot Head A. A. Shafie, M.N. Kasyfi and N. I. Taufik Y	14
4. Development of Cooperative Mini Robot Amir A. Shafie , Siti E.M.Z and Shazeela A	21
5. Humanoid Robot Arm Amir A. Shafie and Mohd N. Y.	26
6. Designing Human Robot Interaction for Emotionally Expressive Robotic Hear AMIR-III A. Iqbal, A. A. Shafie, and M. R. Khan	32
7. An Overview of Fuzzy Based Person Following Robot T. Alamgir, I. J. Alfar and M. M. Rashid	38
8. Mechanical Design of a Person Following Robot Tarik Bin Alamgir, Ibrahim Jawad Alfar and Muhammad Mahbubur Rashid	43

9. Development of Fuzzy Based Person Following Robot part 2	49
Tarik Bin Alamgir, Ibrahim Jawad Alfar and Muhammad Mahbubur Rashid	
10. Mobile Robot for Fined Tube Inspection	56
Muhammad Mahbubur Rashid	
11. Robot Aided Upper Limb Rehabilitation System: Mechanical Design	64
Shahrul Na'im Sidek, Hidayatullah Mohamed Nawi	
12. Robot Aided Upper Limb Rehabilitation System: Electronics for Sensors and Actuators	69
Shahrul Na'im Sidek, Khairul Anwar Khalid	
13. Robot Aided Upper Limb Rehabilitation System: Results and Analysis	73
Shahrul Na'im Sidek	
14. Snake Robot Locomation in Narrow Space: A Review	79
Raisuddin Khan, Mitsuru Watanabe and Masum Billah	
15. Multiple Hexapod Robot and Collaborative communication	86
Raisuddin Khan, Masum Billah and Mohiuddin Ahmed	
16. Autonomous Unicycle Robot Using Reaction Wheel Pendulum: Mechanical Design	94
Atika Adrina Teepol, Nur Fadhilah Mohd Fauzey, Shahrul Na'im Sidek, Yasir Mohd Mustafah	
17. Autonomous Unicycle Robot Using Reaction Wheel Pendulum: Controller Design	103
Nur Fadhilah Mohd Fauzey, Atika Adrina Teepol, Shahrul Na'im Sidek, Yasir Mohd Mustafah	

HISTORICAL BACKGROUND AND EDUCATION

19. **Develop an Algorithm for Goal Finding Robot using Reinforcement Learning** 118
M. Kamal, R. Khan, S. Bazuhair and M. Billah
20. **Design and Development of 2 Fingers Robotic Hand Actuated by Active Grasping Data** 126
MdMozasser Rahman¹,MohdZoolfadli B MdSalleh
21. **Design and Development of Interactive Fish Robot** 144
MdMozasser Rahman¹,RizaMuhida and Mohammad Zukhair b MohdNazmi
22. **Design and Development of A Digger Robot** 154
MdMozasser Rahman,MohdRuzaini Bin AbdRalim and Others
23. **Glass Wall Cleaning Robot: A Review** 170
Md Mozasser Rahman, Ahmed Murgab Mohammed Mahil, Norsofiana Bt Umar and Nurul Izzati Bt Samsuddin
24. **Glass Wall Cleaning Robot: -Electrical design and control** 177
Md Mozasser Rahman, Ahmed Murgab Mohammed Mahil, Norsofiana Bt Umar and Nurul Izzati Bt Samsuddin
25. **Glass Wall Cleaning Robot: -Electrical design and control** 187
M. M. Rahman, M. R. b A. Ralim
- ✓ 26. **Development of Robotic Manipulator to assist human using brain Signal** 198
Mahbuba Hossain, Raisuddin Khan, and Masum Billah
- ↳ 27. **Glass Wall Cleaning Robot: Mechanical Design** 204
Mahbuba Hossain Raisuddin Khan, and Masum Billah

28. Intelligent SCADA Based Monitoring Scheme for Low Voltage Distribution System	210
M. J. E. Salami, A. M. Aibinua, Mohd Shafie Bin Sani and Nurfaizal Bin Wah	
29. Intelligent SCADA Based Monitoring Scheme for Low Voltage Distribution System	218
Abdullateef Ayodele Isqeel and Momoh Jimoh Eyiomika Salami.	
30. Autonomous Goal Finding Robot	227
M. Kamal, Md. R. Khan, Faisal and M. Billah	
31. Intelligent SCADA Based Pipe Monitoring System	236
M. J. E. Salami, A. M. Aibinua, Mohd Shafie Bin Sani and Nurfaizal Bin Wah	
32. Path Tracking of Car Like Mobile Robot	250
A. A. Isqeela and M. J. E. Salami	
33. A New Energy Efficient Building System	255
M. J. E. Salami, Md. R. Khan, O. A. Abdulquadric	
34. Automatic Car Parking System	262
M. J. E. Salami, Md. R. Khan and O. A. Abdulquadria	
35. Anthropomorphic biped robot	267
A. A. Shafie, M. F. Baharudin	

CHAPTER 6

Designing human robot interaction for emotionally expressive robotic head AMIR-iii

A. Iqbal^{1,a}, A. A. Shafie^{2,b}, and M. R. Khan^{3,c}

6.1 Introduction

When people think about a robotic control interface they usually envisage a screen with different flashing lights and numerical indications from the sensors or robot devices that are meant to represent the condition of the robot. This kind of interface can mean that the use of the robot, the interaction and the diagnosis are limited to specialist users. However, in some situations and certain fields it could be advantageous to have a simple interface, on which, people without any knowledge of computer science and robots, could interact effectively.

As robots have been predicted to become part of our everyday life, there have been a significant number of active researches in the area of Human-Robot Interaction (HRI) for socially interactive humanoid robots. Among the innovative methods proposed includes Michalowski [1] that shows a rhythmic movement technique to engage a robot with human for an effective interaction. Cynthia [2] and Rosalind [3] suggests that HRI for applications like socially interactive machines can be very effective if it can exchange emotional expressions with the human counterpart. To date, robots have been studied in a variety of therapeutic application domains, ranging from using robots as exercise partners, using robots in pediatrics, robots as pets for children and elderly people, and robots in autism therapy. Researchers have developed robots engaged in social interaction with human using various modes of communication. Robots such as Paro [4], Robotia [5], Keepon [6], Infanoid [7], Kismet [8] have been used successfully to emotionally engage with human very effectively via speech, vision, touch etc. as the channel for interaction.

The human face is one of the most compelling components of a human-like interface. The most common way of expressing emotional state of a human is via facial expression augmented with verbal cues and physical gestures. Emotional expressions over time may make peoples' faces descriptive of their personalities and their state of mind. Emotions are very natural and integrated attributes of human behavior. Peoples try to understand and interpret human emotions and respond to it in an appropriate way to maintain a natural interaction with each other. It is only then that an effective and natural Human-Human interaction takes place. While emotions are reflected in the voice, in hand and body gestures, to express the feelings, face is undeniably the most important part of the body that displays major information regarding the emotional state of human.

6.2 Evolution of the humanoid head: AMIR

The first prototype of the robotic head, named AMIR-I [9, 10], had Basic Stamp 2 microcontroller at its heart. The controller was linked to 17 parallax servo motors connected with different parts of the mechanical structure. The aim of AMIR-I was to head-start into this emerging field of research and create a test bed for development and iterative improvement towards developing an interactive
