Topics in Coding, Cryptography and Information Security

Contents

List of Contributors	ii
Editorial Introduction	vi

PART I: SOURCE CODING

1. Performance Analysis of Image Data Compression using Zero-Tree Wavelet Transform <i>Othman O. Khalifa, Emir Tabakovic, Zlatko Memisevic and Aisha-Hassan Abdullah</i>	2
2. Scalable and Robust Streaming Video System Challenges <i>Othman O. Khalifa, Sinzobakwira Issa and Mohammad Umar Siddiqi</i>	12

PART II: CHANNEL CODING

3. Golay Codec: An Overview <i>Othman O. Khalifa</i>	23
4. Reed-Muller Codes: An Overview <i>Othman O. Khalifa</i>	35
5. Viterbi Decoder: A Review and Implementation <i>Noorainani Ainina Bt. Md Noor Albakri and Othman O. Khalifa</i>	42

6.	Zigzag Codes: High Rate Low Complexity Iterative Codes <i>Sigit P.W. Jarot</i>	53
7.	Convolutional Coded OFDM in Broadband Mobile Communication <i>Sigit P.W. Jarot</i>	66
8.	Channel Coding Techniques in Mobile Communication Systems <i>Othman O. Khalifa and Rashid A. Saeed</i>	77
9.	Channel Coding in CDMA 2000 <i>Othman O. Khalifa</i>	85
10.	Channel Coding in Mobile WiMAX <i>Rashid A. Saeed and Othman O. Khalifa</i>	91
11.	Turbo Codes: An Error Correction Technique for 4G <i>Mosharraf Hussain Masud and Mohammad Umar Siddiqi</i>	99
12.	Combined Source Channel Decoding for Image Transmission over Noisy Channels <i>Jalel Chebil</i>	108

PART III: CRYPTOGRAPHY AND INFORMATION SECURITY

13.	Cryptographic Boolean Functions: Transform Domain Perspective <i>Hashum Mohamed Rafiq and Mohammad Umar Siddiqi</i>	120
14.	Implementation of RSA Algorithm <i>Hafizul Azizi Rasid, Mohd Azmi Jabar and Othman O. Khalifa</i>	141
15.	GSM Security: Problems and Solutions <i>Rashid A. Saeed and Othman O. Khalifa</i>	152
16.	Recent Approaches to Wireless Physical Layer Security <i>M. Tahir, Sigit P.W. Jarot and M.U. Siddiqi</i>	161
17.	Securing OFDM-based Systems from the Physical Layer <i>Sigit P.W. Jarot</i>	169
18.	Simulation of Artificial Noise based Physical Layer Security <i>Muhammad Izzat bin Zurkiple and Sigit Puspito Wigati Jarot</i>	174

19. Secure IPv6 Address Generation 183
Nashrul Hakiem, Mohammad Umar Siddiqi, and Sigit Puspito Wigati Jarot
20. Video Streaming and Encrypting Algorithms 190
Mohammed Abumuala, Othman O. Khalifa, and Aisha-Hassan A. Hashim
21. Wireless IP Camera based on Motion Detection Surveillance System 217
Zeeshan Shahid and Khaizuran Abdullah
22. Design of Mobile Phone Jammer 223
Fauzum Abdullah Asuhaimi, Nur Fatin Mohd Zakki, and Khaizuran Abdullah

Index

Chapter 1

Performance Analysis of Image Data Compression using Zero-Tree Wavelet Transform

Othman O. Khalifa, Emir Tabakovic, Zlatko Memisevic and
Aisha-Hassan Abdullah

1.1. Introduction

With the growth of technology and the entrance into the digital age, the world has found itself amid a vast amount of information. Dealing with such enormous amount of information can often present difficulties. Digital information must be stored and retrieved in an efficient manner, in order to be practical. Wavelet compression is one way to deal with this problem. The raw data (graphics, audio and video) requires considerable storage capacity and transmission bandwidth. Despite rapid progress in mass-storage density, processor speeds, and digital communication system performance, demand for data storage capacity and data-transmission bandwidth continues to outstrip the capabilities of available technologies. The recent growth of data intensive multimedia-based web applications have not only sustained the need for more efficient ways to encode signals and images but have made compression of such signals central to storage and communication technology [1, 2, 3, 4].

1.2. Compression Fundamentals

Compressions rely on two main strategies: getting rid of redundant information (redundancy reduction) and getting rid of irrelevant information (irrelevancy reduction). Redundancy reduction is often used when the image is being encoded (or re-encoded). It looks for patterns and repetitions that can be expressed more efficiently. If, for example, there are 25 black pixels in a row, it is clearly better to record the information for one pixel and state that the next 24 are all the same, than to record each pixel separately. This particular example is known as run-length encoding (RLE). Irrelevancy reduction aims to remove or alter information that makes little or no difference to the perception of the image. This usually happens prior to the encoding and involves a transformation of the image. Some of an image's color information, for example, can be safely simplified without being perceptible to the human eye. However, when carried to an extreme this sort of compression becomes visibly obvious and compromises the quality of the image.
