TABLE OF CONTENTS

	TITLE	No
PART 1:QoS APPF	ROACHES	
CHAPTER 1:	Introduction to QoS Approaches	2
CHAPTER 2:	Internet Quality Of Service Architectures	1 1
CHAPTER 3:	Integrated Services	17
CHAPTER 4:	Differentiated Services	21
CHAPTER 5:	Quality Of Service (QoS) Ad-Hoc On-Demand Distance Vector (AODV)	27
CHAPTER 6:	QoS Routing In Ad-Hoc Wireless Networks	33
CHAPTER 7:	MPLS And Traffic Engineering	41
PART 2: MOBILIT	TY MANAGEMENT APPROACHES	
CHAPTER 8:	Introduction to Mobility Management	47
CHAPTER 9.	Nested Mobile Networks	53
CHAPTER 10:	Evaluation of NEMO Extensions	59
CHAPTER 11:	Handoff Process In Micromobility Protocols	65
CHAPTER 12:	Comparison Between Network Simulators	71
PART 3: WIRELE	SS TECHNOLOGY	
CHAPTER 13:	Introduction to Local Area Network (LAN) Communication Protocols	77
CHAPTER 14:	MANET routing protocols	85
CHAPTER 15:	VANET Applications	95
CHAPTER 16:	Vehicle To Vehicle Routing Protocols	101
CHAPTER 17:	Wi-Fi Mesh Network	111
CHAPTER 18:	Overview Of Wimax Mesh	117
CHAPTER 19:	Current Trends On WIMAX Using MIMO Technology	129
CHAPTER 20:	Self-Organized Femtocell Networks	141
CHAPTER 21:	Self-Organized Synchronization For Femtocell Network	155
CHAPTER 22:	Spectrum Management In Femtocell	169
CHAPTER 23:	Smart Grid Communication	179
CHAPTER 24:	UWB Overview	189
CHAPTER 25:	ZIGBEE Applications	197

CHAPTER 26:	Improvement Of Vertical Handover In GPRS/WIFI Seamless Convergence	205
CHAPTER 27:	The Application Of Sensor Network And Routing Protocols In Wireless Communication	215
CHAPTER 28:	A Study Of Channel Assignment Approach To Reduce Frequent Reassignment	227
CHAPTER 29:	Association Management Schemes For Wireless Mesh Network	231
CHAPTER 30:	Challenges In Multi-Radio Multi-Channel Wireless Mesh Network	237
CHAPTER 31:	Mobility Support in Diffserv and MPLS network	243
CHAPTER 32:	Mobility Management And Context Transfer	247
CHAPTER 33:	LTE -Advanced Overview	251
CHAPTER 34:	Time Synchronization Protocols And Approaches	261
CHAPTER 35:	MPLS Architectures	265

CHAPTER 15

VANET APPLICATIONS

MAHMOUD A. ALAWI, RASHID A. SAEED, AISHA HASSAN ABDALLA HASHIM

Electrical and Computer Engineering Department, Kulliyyah of Engineering, International Islamic University. Malaysia (IIUM), Jalan Gombak, 53100. Kuala Lumpur, Malaysia.

15.1 INTRODUCTION

Information technology (IT) changed many industrial sectors starting from education, health care to the government level. Currently, IT is in early stages of transforming transportation system. IT has changed the thinking of the people on the notion of improving country transportation where the minds of the people concentrate on building new roads or repairing the old ones only. Thus it must be known that the improvement of transport infrastructure will not only depend on concrete and steel but also by making possible for the transportation system infrastructure such as vehicles, traffic light, message sign to become intelligent by embedding them with microchips and sensors and empowering them to communicate with each other through wireless technologies [1].

The research community and automotive industry currently focus on deploying network among vehicles. This network makes possible for the vehicles to communicate with each other or with roadside unit. These communications can be classified in two different technologies. These include Inter vehicle communication (IVC) which is communication between vehicle to vehicle also known as (V2V) and the other one is Road vehicle communication (RVC) which focuses on enabling a vehicle to communicate to the roadside unit (RSU). Fig. 15.1 shows difference scenarios of vehicle to infrastructure communication (V2I) which is responsible for connecting vehicles to the outside word (Internet) and vehicle to vehicle communication which is used for exchange information between the vehicles [2].

It is an acceptable fact that VANET is a new emerging field of research where many industries and academies spent significant amounts of time and resources to invest study, deploy, and test the technology. There are several ongoing research activities, projects and consortia that are currently working on deploying the said technology. Concerning with, VANET network most of the projects and researches are conducted in USA, Japan, and Europe. Table 15.1 shows different projects that take place in a specific country.
