Communication Technology, International Islamic University Malaysia,
Malaysia

Abstract

In systems there can be many tasks that are being managed. These tasks are managed through scheduling and managing them during and after executions. Many devices are connected to the system and all can send task at any time, some time parallel tasks.

14.1 Introduction

Windows Task Scheduler is a component available in Windows 98, Windows 2000, and Windows XP. Provides the ability to schedule the launch of programs or scripts at pre-defined times or after specified time intervals.

14.2 Scheduled Tasks

This task will allow you to schedule a task for future so you can configure the task for future use. Task will run automatically at given time.

14.3 Security Center

If alert for security and all the time security settings are not at required level it will alert you for the same. We can do changes in it and we can make these settings enable or disable from here.

14.4 Sound and audio devices

This setting allows you to choose speaker and mike and it allows you to change the settings in that.
