Abstract

The command line is a computer interface used by MS DOS operating systems to operate system by using predefined sets of commands. Each command does perform a specific task. The users in this command-line user interface system remember all the commands and type in each and every command correctly, a mistake in text of the command can create delay or a command refused to be executed.

17.1 Introduction

Storage management/disk management support partition-oriented disk. A basic disk is a physical disk that contains primary partitions, extended partitions, or logical drives. Partitions and logical drives on basic disks are also known as basic volumes. User can create up to four primary partitions, or three primary partitions and one extended partition that contain logical drives.

17.2 Delete a partition or logical drive Using a command line

1. Open Command Prompt.
2. Type: **diskpart**.
3. At the **DISKPART** prompt, type: **list disk**
Make note of the disk number of the disk from which you want to delete the partition.
4. At the **DISKPART** prompt, type: **select disk#**
Select the disk *n* from which you want to delete the partition.
