# Table of Content

<b>Chapter 1</b>		<b>Page</b>
Amorphous Coating of Iron Nickel Alloy		<b>1</b>
		Suryanto
<b>Chapter 2</b>		
Characterization of Electroplated Nanocrystalline NiFe Alloy Films		<b>7</b>
	Yusrini Marita and Iskandar I. Yaacob	
<b>Chapter 3</b>		
Corrosion Behavior of Zinc in Potassium Hydroxide Aqueous Solution		<b>13</b>
		Suryanto
<b>Chapter 4</b>		
Development of Carbon Doped TiO <sub>2</sub> Photocatalyst for Pigment Degradation		<b>19</b>
	Muh Rafiq Mirza Julaihi, Asep Sofwan Faturohman Alqap and Iis Sopyan	
<b>Chapter 5</b>		
Dynamic Mechanical Analysis of Carbon Fibre Composites		<b>25</b>
	Hazleen Anuar, Sahrim Hj. Ahmad and Rozaidi Rasid	
<b>Chapter 6</b>		
Effect of Composition on Phase Transformation of Iron-Platinum Nanoparticles		<b>31</b>
	Koay Mei Hyeie and Iskandar I. Yaacob	
<b>Chapter 7</b>		
Effect of Nanosized Alumina Reinforcement in Intermetallic Nickel Aluminide on the Formation of $\gamma'$ Precipitates		<b>37</b>
	Roslina Ismail and Iskandar I. Yaacob	
<b>Chapter 8</b>		
Effect of Sintering Temperature on Protein Foaming-consolidation Porous Alumina-tricalcium Phosphate Composites		<b>43</b>
	Ahmad Fadli and Iis Sopyan	
<b>Chapter 9</b>		
Electrical Property of ITO Thin Film Deposited by Rf Magnetron Sputtering		<b>49</b>
	Agus Geter Edy Sutjipto, Nurul Hajar and Farah Diana	
<b>Chapter 10</b>		
Electrochemical Study of Zinc Selenide Thin Films Prepared for Photovoltaic Applications		<b>55</b>
	Souad. A. Mohamad, A. K. Arof	
<b>Chapter 11</b>		
Electrodeposited CdS / CdTe Solar Cells		<b>61</b>
	Souad. A. Mohamad	
<b>Chapter 12</b>		
Fabrication of Biomass Pellet from Mesocarp Fiber		<b>65</b>
	Zahurin Halim and Nurshazana Mohamad	
<b>Chapter 13</b>		
Fabrication of Kenaf Sandwich Panel		<b>68</b>
	Siti Khadijah Abdul Rahman and Zahurin Halim	

<b>Chapter 14</b>		
Foam Impregnation Method for Artificial Bone Graft Application		<b>78</b>
: Study on the Effect of Drying Time	Fariza Abdul Rahman and Zuraida Ahmad	
<b>Chapter 15</b>		
Foam Impregnation Method for Artificial Bone Graft Application		<b>84</b>
: Study on the Effect of Sintering Temperature	Zuraida Ahmad and Fariza Abdul Rahman	
<b>Chapter 16</b>		
FTIR Analysis - Aluminium Hydroxide Treated with Silane Coupling Agent		<b>89</b>
	Noorasikin Samat, Nor Suhaila Nor Saidi and Muhammad Saffuan Sahat	
<b>Chapter 17</b>		
Inorganic / Organic /Inorganic Double Junction Thin Film Solar Cells		<b>92</b>
	Souad. A. Mohamad	
<b>Chapter 18</b>		
Investigation on The Effect of Ultra Violet on Cotton Albumen Composite		<b>96</b>
	Zahurin Halim , Zuraida Ahmad and Fauziah Md Yusof	
<b>Chapter 19</b>		
Measurement of Oxygen Permeability in Bulk Alloys by Internal Oxidation of Dilute Constituent		<b>100</b>
	Mohd Hanafi Bin Ani and Raihan Othman	
<b>Chapter 20</b>		
Natural Dye Coated Nanocrystalline Tio <sub>2</sub> Electrode Films for DSSCs		<b>106</b>
	Souad. A. Mohamad and Iraj Alaci	
<b>Chapter 21</b>		
Normal Deposition to Anomalous Deposition		<b>109</b>
	Suryanto	
<b>Chapter 22</b>		
Polymer Clay Nanocomposites: Part II- Synthesis of Polymer Nanocomposites		<b>115</b>
	Noor Azlina Hassan, Norita Hassan	
<b>Chapter 23</b>		
Production of Porous Calcium Phosphate Ceramics through Polymeric Sponge Method		<b>120</b>
	Asep Sofwan Faturohman Alqap, Nur Ain Rakman, and Iis Sopyan	
<b>Chapter 24</b>		
Silicone Doped Calcium Phosphate Powder Synthesized via Hydrothermal Method		<b>126</b>
	Asep Sofwan Faturohman Alqap, Iis Sopyan and Zuria Farhana Kushaili	
<b>Chapter 25</b>		
Stress Analysis of Backend Metallization		<b>132</b>
	Iskandar I. Yaacob and Goh Chia Lan	
<b>Chapter 26</b>		
Study on Metal Removing from Alumina Ceramics		<b>137</b>
	Agus Geter Edy Sutjipto and Muhyiddin Bin Budah@Udah	

<b>Chapter 27</b>		
Surface Quality of <i>Dipterocarpus Spp</i> under Tropical Climate Change: Effect of Pre-Weathering		<b>146</b>
	Mohd Khairun Anwar Uyup, Hamid Hamdan, Paridah Mat Tahir, Hazleen Anuar, Noorasikin Samat, Siti Rafidah Mohamed	
<b>Chapter 28</b>		
Surface Topography of Sulphuric Treated Carbon Fibre		<b>151</b>
	Hazleen Anuar, Sahrim Hj. Ahmad and Rozaidi Rasid	
<b>Chapter 29</b>		
Synthesis and Characterization of Electrodeposited Iron-Platinum Nanostructured Thin Films		<b>157</b>
	Seoh Hian Teh and Iskandar I. Yaacob	
<b>Chapter 30</b>		
Synthesis of Magnetic Nanoparticles in Water-in-Oil Microemulsions		<b>164</b>
	Iskandar I. Yaacob	
<b>Chapter 31</b>		
The Effect of R-ratio on Fatigue Crack Propagation in Plasticised PVC and Modified PVC		<b>170</b>
	Noorasikin Samat, Alan Whittle and Mark Hoffman	
<b>Chapter 32</b>		
The Effect of R-ratio on Fatigue Crack Propagation in Un-plasticized PVC and Modified PVC		<b>175</b>
	Noorasikin Samat, Alan Whittle and Mark Hoffman	
<b>Chapter 33</b>		
Thin Film of Indium Tin Oxide and Its Deposition Technology Deposition		<b>180</b>
	Agus Geter Edy Sutjipto, Sugrib Kumar Shaha	
<b>Chapter 34</b>		
X-ray Photoelectron Studies on the Surface Chemical States of Yttria-Stabilized Zirconia Thin Film in Aqueous Acid Hydrofluoric		<b>186</b>
	Sukreen Hana Herman, Mohd Hanafi Ani, and Susumu Horita	
<b>Chapter 35</b>		
ZnO / Polymer Junction Growth for Hybrid Solar Cell Applications		<b>194</b>

**Keywords:** Solar cells, ZnO, Polymer, Electrochemistry, Thin Films

**Abstract.** A hybrid solar cell is designed and proposed as a feasible and reasonable alternative. With the employment of zinc oxide (ZnO) and polyethylene oxide (PEO) thin films. ITO based thin films of ZnO were deposited by sputtering technique and ITO based thin films of polyethylene were deposited by solution cast technique and used as an active polymer blend. These ITO base thin films were introduced with ZnO and PEO in such a way that, the most effective configuration was optimized to be Ag/ITO/ZnO/PEO/ITO/Ag. All thin films samples were subjected to structural, optical and morphological characterization by; X-Ray, UV-VIS and SEM respectively.

### Introduction

Light to electrical energy conversion by dye-sensitized solar cells (DSSCs) was first reported by O' Regan and Graetzel in 1991 [1]. The injection of electrons from a photo-excited state of the dye sensitizer into the conduction band of the semiconductor upon absorption of light forms the basis for electricity generation in the solar cell. DSSCs based on liquid electrolytes have shown high-energy conversion efficiency that has reached 11% under irradiation of AM 1.5 [2–4] and the production cost compared to that of traditional photovoltaic devices is relatively low. Although the conversion efficiencies of DSSCs based on liquid electrolytes are quite high, there are still problems to be solved. Electrolyte leakage, solvent evaporation, and high-temperature instability are among the many problems. These problems have led to difficulties in sealing and photochemical degradation and have delayed DSSCs from practical uses [5, 6]. To solve these problems, the use of such liquid electrolytes has been replaced by polymer electrolytes [7], which can be prepared in thin film form by solution casting. The conductivity of polymer electrolytes can be optimized with the appropriate amount of salt and plasticizers or inert fillers and they are flexible. Polymer electrolytes can also be prepared in semi-solid or gel form. The use of a gel polymer electrolyte based on poly(acrylonitrile-co-styrene)/NaI+I<sub>2</sub> and a binary solvent mixture containing ethylene carbonate and propylene carbonate on dye-sensitized TiO<sub>2</sub> has been demonstrated in Ref. [8]. Polymer electrolytes can also be formed using blends of different polymers. A polyblend electrolyte of PVP/PEG+KI+I<sub>2</sub> on dye-sensitized TiO<sub>2</sub> has been reported in Ref. [9]. The polymer electrolyte used in this work is a blend of polyethylene oxide (PEO) and chitosan. Chitosan is a biopolymer which has electron-donating atoms in the form of oxygen and nitrogen. The structure and properties of chitosan/PEO films have been reported to exhibit good mechanical properties [10]. Budtova et al. [11] have shown that blending PEO with chitosan does not
