SELECTED TOPICS IN ADVANCED ELECTRONICS

CONTENTS

Chapter 1 ........................................................................................................................................... 1
WIRELESS CONNECTIVITY OF PC PERIPHERALS USING ULTRAWIDE BAND (UWB) PULSES
Khalid A. S. Al-Khateeb and Ahmed Ramzi Mohammed

Chapter 2 ........................................................................................................................................... 11
VOLTAGE CONTROLLED OSCILLATOR FOR STANDARD GSM USING MEMS
Khalid A. S. Al-Khateeb

Chapter 3 ........................................................................................................................................... 23
MEMS SURFACE ACOUSTIC WAVES OSCILLATOR
Jamilah Karim, Anis Nurashikin Nordin and AHM Zahirul Alam

Chapter 4 ........................................................................................................................................... 37
USING MEMS IN CLASS D AMPLIFIERS FOR STANDARD GSM CARRIER
Khalid A. S. Al-Khateeb

Chapter 5 ........................................................................................................................................... 52
MEMS CAPACITIVE ULTRASONIC TRANSDUCERS
Khalid A. S. Al-Khateeb

Chapter 6 ........................................................................................................................................... 57
DESIGN OF MEMS CANTILEVER ENERGY HARVESTER
Anis Nurashikin Nordin and Aliza Aini Md Ralib

Chapter 7 ........................................................................................................................................... 67
THEORY OF QUANTUM CRYPTOGRAPHY
Ali Sallami and Khalid A. S. Al-Khateeb

Chapter 8 ........................................................................................................................................... 77
QUANTUM KEY DISTRIBUTION PROTOCOLS
Ali Sallami and Khalid A. S. Al-Khateeb

Chapter 29............................................................................................................................... 337
MODELING CMOS WAFER PRODUCTION LINE USING PROMODEL SOFTWARE
Khalid A. S. Al-Khateeb and Khairul Hakimin B. Zainiddin
CHAPTER 28

ADVANCED RFID SECURITY FRAMEWORK FOR DYNAMIC TRAFFIC MANAGEMENT

By

Khalid A. S. Al-Khateeb and Jaiz A. Y. Johari
Department of Electrical and Computer Engineering,
Faculty of Engineering,
International Islamic University Malaysia

Synopsis
It is generally assumed that all RFID tags use default static RFID security in RFID based dynamic traffic management systems. The static security framework however, is prone to violation of data privacy and information security. Such violation can cause devastating effects. This has raised a growing concern amongst the RFID community. Efforts are directed at developing techniques and methods to overcome these problems. Investigations are carried out and proposals are made for a feasible security framework. A solution is then suggested for the problems of Dynamic Traffic Management and Control.

In this chapter a framework for security and privacy of RFID systems is introduced. It covers physical interfacing and RFID data integration security based on IEEE 802.1x authentication framework. The proposal involves the implementation of an efficient management scheme. It is anticipated that secure RFID networks together with open Internet technologies will revolutionize traffic control and management systems throughout the world.

1. Introduction
The security and privacy of Radio Frequency Identification (RFID) systems are critical issues in Ubiquitous RFID Networks. RFID tags are assumed to use simple default security settings in the dynamic traffic management. It can be referred to as static RFID security. The static security protocol is prone to violations of information and data privacy that may cause major public concerns [1][2].
