ABSTRACT

This project is using an online-approach that can minimize the usage of three major things in our life; time, money, and energy. The main objective of this project is to ease the process of selling and buying book among International Islamic University (IIUM) community by replacing it gradually to online system. The Online Book Seller Finder system will be able to provide user with online buying, selling, and auctioning process. Online Book Seller Finder system will be able to benefit IIUM community in being more efficient.

Keywords: E-Books, Online Books, E-Commerce

INTRODUCTION

In order to build effective online system, it is a need to know the background of the problem. Traditional way is wasting these three major things; time, money, energy. Time; finding the person that have the book, the finding process that just convenient in day time, finding the person that want the book, time that use to spread the message, and period of time people aware with the handbill/poster/pamphlet. Money; cost that use for handbill/poster/pamphlet and the cost that use to contact each other. Energy; energy that use in the process and the energy that use to paste the handbill/poster/pamphlet. E-commerce systems will easier the process. E-commerce system can be explain as buying and selling products or services over electronic systems such as the Internet and other computer networks (Wikipedia, 2011). The book seller finder system is also one of e-commerce system.

The researcher found that it always a problem to student to find book that has been requested by lecturer without any delay. It is either the book is sold out, or the book is no longer being printed out. Moreover, the book will be expensive since it's written by international author. With this system, student can minimize the cost and saving for other things. The system is built for International Islamic University Malaysia (IIUM) community.
