MECHATRONICS BOOK SERIES

CONTROL AND INTELLIGENT SYSTEMS

Momoh Jimoh E. Salami
Abiodun Musa Aibinu
Yasir Mohd Mustafah

IIUM Press
INTERNATIONAL ISLAMIC UNIVERSITY MALAYSIA
# Table of Content

PREFACE .......................................................................................................................... v
EDITOR .............................................................................................................................. vi

SECTION 1: INTELLIGENT CONTROL SYSTEM ....................................................... 5

Chapter 1 ........................................................................................................................... 6
Working Principle and Operating Mode of Atomic Force Microscopy
Iskandar Al-Thani Mahmood

Chapter 2 ........................................................................................................................... 13
Design and Development of controller of Active Power Filter for Industrial Usage part 1
M.M.Rashid, N.A.Ramin and Zahurul

Chapter 3 ........................................................................................................................... 21
Design and Development of controller of Active Power Filter for Industrial Usage part 2
M.M.Rashid, N.A.Ramin and Zahurul

Chapter 4 ........................................................................................................................... 30
Design and Implementation of Instant Noodles Vending Machine
M.M.Rashid

Chapter 5 ........................................................................................................................... 39
Development of Intelligent Belt Conveyor System (Part 1)
M. M. Rashid, Faruok Alliays

Chapter 6 ........................................................................................................................... 45
Development of Intelligent Belt Conveyor System
M.M.Rashid, Faruk, M J E Salami

Chapter 7 ........................................................................................................................... 50
Anti Skid Control System, A Tutorial
M. J. E. Salami, A. M. Aibinu, A. F. Salami and Mohd Sofian Bin Basrah

Chapter 8 ........................................................................................................................... 54
Design and Prototyping of Inertia Wheel

Chapter 9 ........................................................................................................................... 62
Control of Automatic Drilling Machine by PLC
Md Mozasser Rahman, Najiah Md Zain @Abdul Rahman and Mohd Syazwan Bin Jamil

Chapter 10 .......................................................................................................................... 74
Automatic Storage and Retrieval System
Abdul Kadir Abdul Jabar Abdul Kadir, M. J. E. Salami and A. M. Aibinu

Chapter 11 ......................................................................................................................... 80
Control of Unmanned Underwater Vehicle
Raisuddin Khan, Faried Hasbullah and Masum Billah

Chapter 12 ......................................................................................................................... 85
Adaptive Sliding Mode Control for 3dof Helicopter
Mostafa A. Hamood, Rini Akmelawati

Chapter 13 .......................................................................................................................... 93
Backstepping Control of an Autonomous Quadrotor
Norafizah Abas, Rini Akmelawati

Chapter 14 .......................................................................................................................... 103
Piezoelectric Tube Scanner in Atomic Force Microscope
Iskandar Al-Thani Mahmoud

SECTION II: INTELLIGENT CONTROL SYSTEM DESIGN ................................................. 111

Chapter 15 .......................................................................................................................... 112
A Review on Control of Two-Wheeled Wheelchair System
Salmiah Ahmad, M. O. Tokhi

Chapter 16 .......................................................................................................................... 121
A Smart Car Surveillance System using Programmable Logic Controller (PLC)
Siti Fauziah Tehaa and Mohammad Zafran Haja Mohideen

Chapter 17 .......................................................................................................................... 128
Design of Controller for Elevator Group Using Fuzzy Logic Part 1
M.M. Rashid, Azhar

Chapter 18 .......................................................................................................................... 133
Design of Controller for Elevator Group Using Fuzzy Logic Controller Part 2
M.M. Rashid, Azhar

Chapter 19 .......................................................................................................................... 139
Fuzzy Logic-based Intelligent Control of Flexible Link Manipulator
Ismaila B. Tijani and Rini Akmelawati

Chapter 20 .......................................................................................................................... 148
EEG based robot control
A. Khorshidulab and M. J. E. Salami

Chapter 21 .......................................................................................................................... 158
Visual-Based Intelligent Solar Tracking System
Rini Akmelawati, Samir A. Abdul Karoom, Riza Muhida

SECTION III: INTELLIGENT SYSTEM DESIGN ................................................................. 172

Chapter 22 .......................................................................................................................... 173
Intelligent Air-conditioning System
Amir A. Shafie, Raisuddin Khan, H. Al-hataeaid M. Ebrahim

Chapter 23 .......................................................................................................................... 179
An Intelligent Car Surveillance System: Design and Tools Selection
Siti Fauziah Toha and Mohammad Zafran Haja Mohideen

Chapter 24 .......................................................................................................................... 185
Automatic Pipe Bursting Monitoring System
M. J. E Salami, Syed Ahmed Hla Moe Win
Chapter 25: Development of an Intelligent Laundry System
Mohd Hafizi Azmi, Muhammad R. Affendy, M. J. E Salami and A.M. Aibinu

Page 194

Chapter 26: Development of Palmprint based Biometric System
M. A. Rotinwa-Akinbile, A.M. Aibinu and M. J. E Salami

Page 203

Chapter 27: Development of Smart Baby Chair
M. J. E Salami, Fatannah M.S. and Fadiah Bt Ismail

Page 213

Chapter 28: Intelligent Automatic Fruit Identification System
M. Aibinu, M. J. E Salami, N. Hazali, N. Termidzi, and A. A. Shafie

Page 219

Chapter 29: Intelligent SCADA-Based Telemetry System for Monitoring and Controlling of Municipal Sewage Treatment Plant: IIUM, Gombak As a Case Study
Momoh-J.E. Salami, Abdulghafur A., Muhamad F. Sainal and Nasrobin T., Mustapha, Ismaila B. Tijani

Page 229

Chapter 30: Development of Prototype Real-time system for SCADA-based Monitoring and Controlling System for Sewage Treatment Plant
Momoh-J.E. Salami, Abdulghafur A., Muhamad F. Sainal and Nasrobin T., Mustapha, Ismaila B. Tijani

Page 238

Chapter 31: Intelligent Water Heater System
M. J. E Salami and Khairul Ikram Bin Kamarul Bahrain

Page 250

Chapter 32: Machine Intelligence: MIQ, MSQ, and MEQ
Nahrul Khair Alang Md Rashid and Khairul Affendy Md Nor

Page 255

Chapter 33: Coil Windings Determination Using Genetic Algorithm
Abiodun Musa Aibinu, M. J. E Salami and Hafsat Farooqi

Page 260

Chapter 34: Determination of Material Depth Using Artificial Neural Network
Aalya Banu, Sharmila Fathima and Nahrul Khair Alang Rashid

Page 264

Chapter 35: Design of Ink Refilling Machine For Marker Pen
A. M. Aibinu, Rusnajaa Binti Mohd Yusoff And Liyana Bte Sani

Page 278

SECTION IV: MODELLING AND SIMULATION

Page 283

Chapter 36: Hajj Crowd Simulation Based on Intelligent Agent
Teddy Surya Gunawan\textsuperscript{a}, Mira Kartiwi\textsuperscript{b}, Willy Wahyu Mulyana\textsuperscript{a}

Page 284
Chapter 37: Kernel PCA – An Introduction
Hamza Baafi, Momoh-Jimoh Eyiomika Salami, Rini Akmelawati

Chapter 38: System Modelling of a Twin Rotor System: Time and Frequency Domain Analysis
Siti Fauziah Toha and M. O. Tokhi

Chapter 39: System Identification Technique for a Helicopter Using Genetic Algorithms
Siti Fauziah Toha and M. O. Tokhi

Chapter 40: Advanced Noise Removal Techniques for the Detection of EMG Signal
Md. Rezwanul Ahsan, Muhammad Ibn Ibrahim, and Othman Omran Khalifa

Chapter 41: Active Suspension System: Part 1 - Mathematical Modelling
Aiman O. Bajaber, Asan G. A. Muthalif, and Ayman S.I. Elzubair

Chapter 42: Active Suspension System: Part 2 - Controller Design and Simulation
Ayman S.I. Elzubair, Asan G. A. Muthalif, and Aiman O. Bajaber

Chapter 43: Book Shelving Robotics
M. J. E. Salami, Mohd Farid Md Alias, Nurul Izzah Sidek, and Mohamed Mousa

Chapter 44: Model Structure and Random Input for System Identification Technique for Flexible Manipulating System
Siti Fauziah Toha and M. O. Tokhi

Chapter 45: Fault Tree Analysis, A Case Study of a Simple Line Following Robot
Abiodun Musa Aibinu, Haaris Ahmad Quadri, Mu Hiam Mach A Mine, Almehmadi Tarig Saeed S and Hamide Rohimah

Chapter 46: Review of Malaysian Traffic Summon and Payment System
A. M. Aibinu, Sharifah Nadiah bt Syed Mohammad, Wan Nur Faezah binti Wan Azmi
Chapter 36

Hajj Crowd Simulation Based on Intelligent Agent

Teddy Surya Gunawan\textsuperscript{1,a}, Mira Karitwii\textsuperscript{2,b}, Willy Wahyu Mulyana\textsuperscript{3,c}

6.1 Introduction

Hajj ritual is one of Islam pillars that is obligatory for each Muslim who are able (\textit{istitho’ah}). This ability is evaluated based on hajj expenses, health, safety, and also knowledge about how to perform Hajj (\textit{manasik}) [1]. Ministry of Hajj, Kingdom of Saudi Arabia reported that every year more than two million Muslim men and women from over a hundred countries gather in Mecca to undertake the Hajj pilgrimage with the tendency of growing up in number year by year. As mentioned in [2], the impact of Hajj is not only to improve the quality of relationship with Allah (\textit{hablumminallah}) but also relationship with other human being (\textit{hablumminanunnaas}). Furthermore, it is not only to improve the relationship between Muslim but also to increase tolerance with other non-Muslim fellow. Figure 36.1 illustrates the stages of Hajj ritual which consists of \textit{thawaf}, \textit{sa’i}, and \textit{jamarah}.

Many researches have been done on hajj crowd simulation. The purpose of the previous simulation is to simulate the fluidity of the Hajj ritual. In 1990, Al-Gadhri and Mahmassani [3] studied on how to model the crowd behavior and movement on Hajj ritual based on fluid particle. Al-Zahrani and Matbouli [4] with the same approach have done simulation using SimWalk to control the crowd especially during \textit{thawaf} ritual.

To best model the crowd, intelligent agent can be utilized as it enables each character in the crowd to have different goals and different behaviors which reflects the real world [5]. To realistically model the real world, the agent model not only must have the capability to make decision, but also must have location-specific capability [6]. Kim \textit{et. al} [7] stated that individual or a group of pilgrims can be implemented as agents which have the capabilities to sense, think, and act. These capabilities enable more realistic human behavior and crowd model [8].

The objective of this chapter is to develop hajj crowd simulation based on intelligent agent so that it can perform more natural and more complex behavior compared to the one based on fluid particle. Moreover, the developed system can be used for educational purposes (edugame) to improve Muslim knowledge about hajj ritual. Lastly, the developed framework can also be used for other crowd simulation because of the existence of reusable components or objects.
