The Process of DESIGN THESIS in Landscape Architecture

Landscape Architecture is the intertwining aspects of natural sciences, arts, economics, and culture. It is a profession that helps design a 'place' that connects land and human, which has many applications, from a small scale design project to a more significant and large scale urban design as well as regional planning projects. Landscape Architect is indeed the person who designs outdoor environments.

The Process of Design Thesis in Landscape Architecture takes an overview of what are the requirements for the final Design Thesis projects taken up especially in the International Islamic University Malaysia, particularly under the Department of Landscape Architecture.

This guided book includes:

- Storyboards of proposals, case studies, and visual ideas to portray the intention and types of projects often researched on especially for Design Thesis
- The design stage which covers the stages from conceptual ideas until the preliminary Landscape Master Plan
- Detail part of the Landscape Master Plan which includes landscape detail plans, sections and elevations, planting concept as well as the hardscape elements
- Summaries of the landscape illustrations in the form of images and perspective drawings
- And finally the examples of the final Design Thesis projects done by the selected students of Bachelor in Landscape Architecture (Hons.), International Islamic University Malaysia

This guided design thesis book will be beneficial to all Landscape Architecture students not only in Malaysia but also around the world, not forgetting the lecturers or studio coordinators as well as practicing Landscape Architects. Indeed, *The Process of Design Thesis in Landscape Architecture* is a valuable educational tool as well as an endless source of inspiration.
