A robust image watermarking scheme based on discrete wavelet transforms

Esgandari, R. & Khalili, M.
Dept. Computer and Informatics Engineering, Payame Noor University, Tehran, Iran

Abstract
This paper presents a robust image watermarking method based on discrete wavelet transform. In this method, first, the watermark is coded with chaotic map and then embedded in the middle frequency band of the image to minimize the changes. This process improves the image continuity and robustness against different image processing attacks. Experimental results show that, the proposed method not only achieves the main objectives of watermarking successfully, but also has higher robustness against different attacks compared to the earlier works. © 2015 IEEE.
