Contents

Preface xiii

1 General Description and Quantization of EM Fields 1
- 1.1 Introduction 1
- 1.2 Maxwell's Equations for the EM Field 2
- 1.3 Wave Equation 4
- 1.4 Energy of the EM Wave 5
  - 1.4.1 Normalization of the EM Field 6
  - 1.4.2 Hamiltonian of the EM Wave 7
- 1.5 Quantization of the EM Field 10
- 1.6 Summary 11

2 Hamiltonians for Quantum Optics 15
- 2.1 Introduction 15
- 2.2 Interaction Hamiltonian 16
- 2.3 Hamiltonian of an Atom 17
  - 2.3.1 A Two-Level System 18
  - 2.3.2 Spin Operators 20
  - 2.3.3 Atomic Dipole Moment 21
- 2.4 Total Hamiltonian and the Rotating Wave Approximation 23

3 Detection of the EM Field and Correlation Functions 29
- 3.1 Introduction 29
- 3.2 Semiclassical Theory of Photodetection 30
  - 3.2.1 First-Order Correlation Function 30
  - 3.2.2 Second-Order Correlation Function 31
  - 3.2.3 Average Number of Photocounts 32
  - 3.2.4 Variance of the Number of Photocounts 33
- 3.3 Quantum Theory of Photodetection 33

4 Representations of the EM Field **39**
4.1 Introduction 39
4.2 Fock States Representation 40
4.2.1 Single-Mode Number States 40
4.2.2 Multi-Mode Number States 43
4.3 Correlation Functions for a Field in a Photon Number State 44
4.3.1 Normalized Second-Order Intensity Correlation Function 44
4.3.2 Two-Level Atom as a Source of Antibunched Light 46
4.3.3 Fluctuations of the Field Amplitudes 47
4.4 Probability Distributions of Photons 47
4.4.1 Thermal Distribution 48
4.4.2 Poisson Distribution 51
4.5 Coherent States of the EM Field 53
4.5.1 Displacement Operator 56
4.5.2 Properties of the Displacement Operator 57
4.5.3 Representation in Terms of Coherent States 57

5 Photon Phase Operator **61**
5.1 Introduction 61
5.2 Exponential Phase Operator 61
5.3 Susskind–Glogower Phase Operator 63
5.4 Unitary Exponential Phase Operator 67
5.5 Pegg–Barnett Phase Operator 71

6 Squeezed States of Light **77**
6.1 Introduction 77
6.2 Definition of Squeezed States of Light 78
6.3 Squeezed Coherent States 82
6.4 Multi-Mode Squeezed States 91
6.5 Squeezed States of Atomic Spin Variables 94
6.6 Spin Squeezing 97
6.7 Squeezing Spectrum of the EM Field 99
6.8 Detection of Squeezed States of Light 100
6.8.1 Homodyne Detection Scheme 100

7 Phase Space Representations of the Density Operator **107**
7.1 Introduction 107
7.2 Density Operator 108
7.2.1 Density Operator of a Pure State 108
7.2.2 Density Operator of a Mixed State 109
7.2.3 The Basic Properties of the Density Operator 109
7.3 Number State Representation 111
7.4 Coherent States P Representation 112
7.5 Generalized P Representations 115
7.6 Q Representation 116
7.7 Wigner Representation 118
7.8 Relations between the Wigner, Q and P Representations 122
7.9 Distribution Functions in Terms of Quadrature Components 124
7.10 Summary 125

8 Single-Mode Interaction **129**
8.1 Introduction 129
8.2 The Jaynes–Cummings Model 130
8.2.1 The Jaynes–Cummings Hamiltonian 130
8.2.2 State Vector of the System 131
8.2.3 Population of the Atomic Excited State 133
8.3 Collapses and Revivals of the Atomic Evolution 134

9 Open Quantum Systems **141**
9.1 Introduction 141
9.2 Hamiltonian of the Multi-Mode Interaction 142
9.3 Derivation of the Master Equation 143
9.4 Spontaneous Emission and Decoherence 147
9.4.1 The Lamb Shift 148
9.4.2 Spontaneous Emission Rate and Decoherence 149
9.4.3 Einstein's A Coefficient 151
9.5 The Bloch–Siegert Shift: An Example of Non-RWA Effects 152

10 Heisenberg Equations of Motion **157**
10.1 Introduction 157

10.2 Heisenberg Equations of Motion 158
10.3 Lorenz–Maxwell Equations 159
10.4 Langevin Equations 162
10.5 Optical Bloch Equations 164
10.6 Floquet Method 166

11 Dressed-Atom Model 175
11.1 Introduction 175
11.2 Semiclassical Dressed-Atom Model 176
11.2.1 Dressing Transformation on the Interaction Hamiltonian 177
11.2.2 Master Equation in the Dressed-Atom Basis 178
11.3 Quantum Dressed-Atom Model 180
11.4 Atom–Field Entangled States 180
11.4.1 Resonant Field, $\Delta = 0$ 182
11.4.2 Vacuum Rabi Splitting and AC Stark Effect 183
11.4.3 Non-resonant Driving, $\Delta \neq 0$ 186
11.5 Summary 189

12 Fokker–Planck Equation 193
12.1 Introduction 193
12.2 Master Equation of a Harmonic Oscillator 194
12.3 Photon Number Representation 195
12.4 P Representation: Fokker–Planck Equation 198
12.5 Drift and Diffusion Coefficients 201
12.6 Solution of the Fokker–Planck Equation 203
12.7 Stochastic Differential Equations 207

13 Quantum Trajectory Theory 213
13.1 Introduction 213
13.2 Quantum Trajectories 214
13.2.1 Formulation of the Quantum Trajectory Theory 215
13.3 Cavity QED Laser 216

14 Interaction-Free Measurements 221
14.1 Introduction 221
14.2 Negative-Result Measurements 222

14.3 Experimental Schemes of Interaction-Free Measurements 223
14.3.1 The Elitzur and Vaidman Scheme 224
14.3.2 The Kwiat *et al.* Scheme 226

15 Classical and Quantum Interference 231
15.1 Introduction 231
15.2 First-Order Coherence 232
15.3 Welcher Weg Problem 235
15.4 Second-Order Coherence 237
15.5 Two-Photon Interference and Quantum Non-locality 239
15.5.1 Spatial Non-classical Two-Photon Interference 240
15.5.2 Temporal Non-classical Two-Photon Interference 243
15.6 Summary 247

16 Atom–Atom Entanglement 251
16.1 Introduction 251
16.2 Two-Atom Systems 252
16.3 Entangled States of Two Identical Atoms 254
16.4 Entangled States of Two Non-identical Atoms 255
16.5 Creation of Entanglement between Two Atoms 256
16.5.1 Preparation of Atoms in Entangled Symmetric State 257
16.5.2 Preparation of Atoms in Entangled Antisymmetric State 260
16.5.3 Creation of Two-Photon Entangled States 261
16.6 Quantum Interference of the Field Radiated by Two-Atom Systems 262
16.6.1 First-Order Interference of the Field Radiated by a Two-Atom System 263
16.6.2 Two-Photon Interference in a Two-Atom System 266
16.7 Summary 267

17 Classical and Quantum Lithography 271
17.1 Introduction 271

17.2 Classical Optical Lithography 272
17.3 Quantum Lithography 273
17.4 Summary 276

18 Laser Model in the High-Q Limit 279
18.1 Introduction 279
18.2 Master Equation 280
18.3 Stochastic Differential Equations 281
18.4 Semiclassical Steady-State Solution and Stability 282
18.5 Exact Steady-State Solution 284
18.6 Laser Linewidth 287
18.6.1 Below Threshold 287
18.6.2 Above Threshold 288
18.7 Summary 292

19 Input–Output Theory 295
19.1 Introduction 295
19.2 Input–Output Relation 295
19.3 Proof of the Input–Output Relation 297

20 Motion of Atoms in a Laser Field 301
20.1 Introduction 301
20.2 Diffraction of Atoms on a Standing-Wave Laser Field 302
20.2.1 The Case $P_x = 0$ and $\Delta = 0$ 306
20.2.2 The Case $P_x \neq 0$ and $\Delta = 0$ 307
20.3 Radiation Force on Atoms 310
20.3.1 Slowing and Confining Atoms 314
20.4 Summary 315

Final Remark 319
