ASCC 2015
Kota Kinabalu, Malaysia
10th Asian Control Conference
Sutera Harbour Resort, Kota Kinabalu, Sabah
31st May - 3rd June 2015

"Emerging Control Technique for a Sustainable World"

PROCEEDINGS
Table of Contents

2D Occupancy Grid Mapping With Inverse Range Sensor Model

A Backstepping based Flight Control Design for an Overactuated Flying Wing Aircraft

A Calculation Method of Crane Deflection Considering the Boom Gap

A Charge Pump based Power Conditioning Circuit for Low Powered Thermoelectric Generator TEG

A Collaborative Control of Brain Computer Interface and Robotic Wheelchair

A Comparison of Tracking Control Methods in Multi Legged Robots

A Computer Aided Design Method of Stabilizing Controllers for Chaotic Systems External Force Control

A Control of Sliding Doors For Realizing Well Being Livings

A Controller Design for Nonlinear Systems with Time Delay Using Closed Loop Step Response Data

A controller design method for unidentifiable linear SISO systems

A Data driven Predictive Controller Design based on Reduced Hankel Matrix

A Design Method for Modified Smith Predictors for Multiple Input Multiple Output Non Minimum Phase Time Delay Plants with Feedback Connected Multiple Time Delays

A Design Method of On demand Type Feedback Controller Using Coprime Factorization

A Distributed Algorithm for Grid based Search by a Multi Robot System

A Dynamic Output Integration Mechanism for LQG Power Networks with Random Type Parameters

A Fallback Control Study of Networked Control Systems for Cybersecurity

A Flyback SMPS LED Driver for Lighting Application

A Fully Distributed Approach to Resource Allocation Problem under Directed and Switching Topologies

A Fuzzy Neural Approach to Novel Color Balance With

Adaptive control of air to air missile using Multilayer Neural Network feedforward and RISE feedback terms........................................444
Adaptive Iterative Learning Control Approach for PH Neutralization of Batch Processes.................................................................452
Adaptive Neuro Fuzzy Control of Wet Scrubbing Process..................................................................................................................457
Adaptive Sliding Mode Control for Stabilization of Stochastic Chaotic Systems with Multi constraints........................................463
Adaptive Super Twisting Sliding Mode Control on Hydraulic Actuator of a 6 DOF Parallel Manipulator..................................................469
Additional Internal Speed Feedback loop for Servomechanism Residual Vibration Active Damping......................................................475
Agent Motivational and Repulsion Forces Optimization In Agent Basic Movement Model.................................................................480
Agile gait generation for an Anguilliform Robotic Fish..........................................................485
Algorithmic Modeling and Analysis of Nonlinear Biological Systems..................................................................................................491
Algorithms to select right driver nodes for Multi Agent Systems........................................................................................................497
An Evolved Climbing SAWR From Simulation to Realization with 3D Printing..................................................................................503
An Extreme Learning Machine Approach for Chinese Speech Recognition......................................................................................509
An H Controller Design Based on the Butterworth Filter Conversion..............................................................................................514
An H Infty Design for Dynamic Pricing in the Smart Grid...................................................................................................................520
An Identification Procedure for Rate Dependent Friction Laws of Robotic Manipulator with Limited Motion Range...........................526
An Illumination Robust Algorithm based on Visual Background Extractor for Moving Object Detection..................................................531
An Image Processing Approach for Mathematical Modeling of Flexible Structure........................................................................537
An implantable artificial esophagus with the new food transport system based on the analysis of goats specimen..............................543
An Iterative Method for Solving Constrained Nonlinear Optimal Control Problems Using Legendre Polynomials..............................547
Analysis of classification performance of fNIRS signals from prefrontal cortex using different temporal windows...............................552
Control Strategies for Improving Vehicle Stability State of the art Review

Controllability and minimum energy control of fractional systems

Controlling Parameters for Jatropha Biodiesel Production in a Batch Reactor

Convergence Rate Analysis of Delay Interconnected Positive Systems under Formation Control

Convergence speed analysis for evolutionary congestion games

Introduction

Problem formulation

Evolutionary congestion games

Dynamics of nondeterministic evolutionary congestion games

Dynamics of deterministic evolutionary congestion games

Application to traffic networks

General results

An Illustrative example

Conclusion

References

Convergence Time Evaluation of a Gossip Algorithm over Signed Graphs

Cooperative Capture by Multi Agent using Reinforcement Learning

Cooperative Control for Self Organizing Microgrids via Physical Network Connectivity

Cooperative robust output regulation of linear minimum phase multi agent systems under switching network

Cortical Activation Pattern for Finger Movement

Cost effective Sludge Management Through Processing Capability Improvement Of A Sludge Drying Plant

Coverage control for homogeneous mobile sensors with input constraints on a unit circle

Coverage Control on Multi Agent System

</table>
Fuzzy B Spline For Three Dimensional Urban Slum Reconstruction From ENVISAT ASAR Data
Fuzzy PID Gains Tuning Differential Evolution versus Second Order Analytical Algorithms
Gait stabilization of a quasi passive walker based on energy balance by utilizing a mechanical oscillator
Generating Chaos with Neural Network Differential Equation for Intelligent Fish Catching Robot
Genetic algorithm for regionalization problem with adaptive equity constraint
Green Pepper Stem Position Detection by Using a Piezo Sensor
Growth Effects of Anastomosis Site on Patient specific Aortic Hemodynamics after Coarctation Correction A Numerical Study
H 2 controller reduction using the Riccati equations and the block balanced truncation
H Control of Quantum Feedback Control Systems with Time Delay
H infinity control for fuzzy time delay systems via dynamic output feedback
Heavy Vehicle Stability and Rollover Prevention through Switching Model Predictive Control
Hemodynamic Analysis of Controlled Antegrade Pulmonary Blood Flow after Bidirectional Cavopulmonary Anastomosis
Hemodynamic Influence of Surgical Methods on Systemic to Pulmonary Shunt Modified Blalock Taussig Shunt Versus Melbourne Shunt
High Precision Road Segmentation for Cover Level of Forward View Estimation via Stereo Camera
Human Action Recognition using Wearable Sensors and Neural Networks
Human Body Motion Interface for the Mobility and Its Applications
Human Tracking Method based on Improved Hog Real AdaBoost
Hybrid Control Based on Type 2 Fuzzy Iterative Learning
Control Strategies with Stewart Platform for Repetitive Trajectories

Hybrid NNMPC PID Control of a Two Link Flexible Manipulator with Actuator Dynamics

ICA Based Positive Semidefinite Matrix Templates for Eye Blink Artifact Removal from EEG Signal with Single Electrode

Identification and Predictive Control of Spray Tower System using Artificial Neural Network and Differential Evolution Algorithm

Identification of power spectra by reweighted and regularized nuclear norm minimization

Image based Neural Network Controllers for Mobile Robots to Track a Human

Image Restoration of Confocal Microscopy based on Deconvolution Algorithms for Biological Structure

Impact Model and Control of Ultrasonic Excitation using Electromagnetic Acoustic Transducer

Impact of Feature Extraction Techniques on Classification Accuracy for EMG based Ankle Joint Movements

Impacts of IoT and Big Data to Automotive Industry

Implementation of Energy Management System for a Split Parallel In Wheel Motor Hybrid Electric Vehicle

Implementation of Reliable H Infinity Observer Controller for TRMS with sensor and actuator failure

Improved SIFT Algorithm for Place Categorization

Improvement of Batch TRN Using Mean Removal and Two Step Search Method for Lunar Lander

Improvement of Spring Forming Accuracy Using Minimum Variance Control

Improvement on Ride and Handling Performance in HMMWV Suspension Control using Dual Acting Semi Active Suspension System

Improving Data Clustering and Classification Using M3 Self Organizing Maps M3 SOM

In Vitro Recellularization of Aorta Scaffolds Prepared by Sonication Treatment

Inclination Angle Effect on Landmine Characteristics
Medical Image based Analysis of Flow in Heart with Congenital Heart Disease Numerical Simulation of Intraventricular Flow

MegaBits Electronic PnP Modules for Non Engineering Students

Method to Detect Impression Evaluation Patterns on Music Listened to Using EEG Analysis Technique

MFAC based Balance Control for Freeway and Auxiliary Road System with Multi Intersections

Miniature Parallel manipulator using TiNiCu Shape Memory Alloy Microactuators

Mismatched Disturbance Compensation using Sliding Mode Control

Mitigating Pilot Contamination In Massive MIMO System - 5G – An Overview

Model based Predictive Sampled data Control and its Robustness

Model Cart Control Using EMG Signal

Model Predictive Control for Wind Power Generation Smoothing with Controlled Battery Storage Based on A Nonlinear Battery Mathematical Model

Model Predictive Control Strategy Based on Prediction Error Feedforward for Superheating Process

Model predictive current control for PMSM considering trade off between current ripple and number of switching operations

Model Predictive Steering Control for Independent Driving and Steering Vehicles considering Coaxial Steering Mechanism Implementation to an Embedded CPU

Modeling and analysis of a nuclear power plant’s fuel transport system

Modeling and Control of Multiple Drive Belt Conveyor Systems

Modeling of SBR Aerobic Granular Sludge Using Neural Network with GSA and IW PSO

Modeling of Submerged Membrane Bioreactor Filtration Process Using NARX ANFIS Model

Modeling of Widely Liner Quaternion Valued Systems
Using Hypercomplex Algorithms.................................................................1934
Modelling Video based Anomaly Detection using Deep
Architectures Challenges and Possibilities....................................................1940
modelling and simulation of different electrodes of
electrostatic sensors.......................................................................................1948
Modelling and Simulation of Piezoelectric Actuator for
Vibration Control.............................................................................................1955
Modelling And Verification Of 5 Degree Of Freedom
Vehicle Longitudinal Model.............................................................................1961
Modelling of a Conveyor belt Grain Dryer Utilizing a
Sigmoid Network.............................................................................................1967
Modified Gamma Delta Routh Approximation Method for
order Reduction of Discrete Interval Systems..............................................1972
Modified Variable Gradient Method for Constructing the
Lyapunov Function Using Nonlinear Programming Method........................1977
Motion Control of a 1 DOF Pneumatic Muscle Actuator
Positioning System..........................................................................................1983
Motion Estimation of Deformable Target over Infrared
Camera Video In Coarse Resolution with Possible Frame
Out of Target by Particle Filter......................................................................1988
Motion Recognition for Paraplegic Patients wearing a
Powered Lower Limb Orthosis in Ascending and
Descending.......................................................................................................1994
Moving Towards Sustainable HCD for MAL.................................................1999
Multi objective Constrained Model Predictive Controller
Design of Grid Inverter....................................................................................2003
Multi objective LPV L2 Gain Control with Game theoretic
Synthesis...........................................................................................................2008
Multi surface Sliding Control of MIMO Autonomous Flight
Systems.............................................................................................................2013
Multiple Low Rank Matrix Approach to Switched
Auto-regressive Exogenous System Identification........................................2018
Multiuser MIMO Precoding and User Scheduling for
Mobile Communications..................................................................................2024
Mutual Adaptation In Neuro Fuzzy System for Human
Posture Recognition...........................................................................................2030
Nanopositioning Performance of MIMO MPC.............................................2036
Nearly Cyclic Pursuit and Its Hierarchical variant for Multi
Neural Based Predictive Learning Control
Neurocinematics Based on Passive BCI Decoding
Temporal Change of Emotional Arousal during Video Watching from Multi Channel EEG
New Approaches to Parameter Estimation with finite samples
New DXHS Algorithm for Periodic Vibration Control
Numerical Simulation and Experimental Result
New stability criteria for linear systems with interval time varying delays via an extended state vector
Non Fragile Static Output Feedback Control Design with Guaranteed Cost of Uncertain Takagi Sugeno Fuzzy Systems
Nonlinear Control for First Order Nonholonomic System with Hardware Restriction and Disturbance
Nonlinear Control of Quadrotor UAV Using Takagi Sugeno Fuzzy Logic Technique
Nonlinear Direct Adaptive Control of Quadrotor UAV using Fuzzy Logic Technique
Nonlinear Model Predictive Control of anaerobic digestion process based on reduced ADM
Nonlinear Modeling and Vibration Control for a Flexible Manipulator
Nonlinear Self Balancing and Speed Control Using WFMAC for Seatless Electric Unicycles
Nonlinear Stabilization with Bounded Controller
Nonlinear System Identification based on NARX Network
Nonlinear wave modeling and generic model control of Heat Integrated Distillation Column
Novel Hybrid Maximum Power Point Tracking Algorithm for PV Systems under Partially Shaded Conditions
Observability analysis and observer design for DC DC converters A generalized approach
Observer Design For Lipschitz Nonlinear Systems With Time varying Output And State Delays
Odor Measurement and Intelligent Classification
Selfsensing Unbalance Rejection and Reduction of the
Gyroscopic Effect for an Active Magnetic Bearing System

IV. Results and Discussion__________2741
Speed Trajectory Tracking of A Robotic Fish Based on Iterative Learning Control Approach

Spontaneous Ille detection using functional near infrared spectroscopy in an Interactive game

Stability Analysis of a Class of Second Order Switched Systems via Eigenvalues of Matrices

Stabilization for Discrete Time Stochastic Systems with Multiple Input Delays

Stabilization of Nonlinear Sampled data Systems with Input Update Delay

State Dependent Virtual Hierarchization of Batteries for Realizing a Global Control In Energy Network Systems and Its Application to

State estimation for boundary coupled parabolic distributed parameter systems using spatial averages

State Estimation for PDE ODE Cascade Systems

State Feedback Based Control of Air Fuel Ratio Using Two Wide Band Oxygen Sensors

Static strict control Lyapunov function design for the PVTOL system via Minimum Projection Method

Statistical on the signature verification using Rotation Invariant dynamic descriptors

Stealthy Analysis and Optimization based Control Allocation for Flying Wing

Steep Slope Climbing Using Feet or Shins for Six Legged Robots

Stochastic Performance Analysis of Visual Motion Observer and Experimental Verifications

Stress and Drowsiness Evaluation based on Pulse Wave by Earphone type Pulse Sensor

Studies on Eye Tracking and Brainwave Measurement

Studying Resilient Cyber Incident Management From Large Scale Cyber Security Training

Subset fusion based T-S fuzzy modelling for blast furnace gas system in steel industry

Substrate Temperature Dependent Surface Morphology of Nanostructured Zinc Antimonides Thin Films

Summarizing Approach for Efficient Search by k Medoids
Support Vector Machine Identification of a Parallel Cascade Model of Human Ankle Stiffness

Suppression of Competitive Pressure Modes in a Redundant Actuators for a Vibration Isolation Table

Switching Control based on the mode of vibration for Dynamic Absorber

Switching PID Control for an Underactuated Flying Object through Model based Prediction

Synchronization of Master Slave Switched Boolean Networks with Delay

Synchronization of Rigid Body Dynamics in SE 3 without Velocity Measurement

Synchronization of State dependent Switched Boolean Networks

Synthesis of Multivariable PID Controllers via Inter Communicative Decentralized Multi Scale Control for TITO Processes

Synthesis of Variable Gain Robust Controllers Based on Point Memory LQ Regulator for a Class of Uncertain Time Delay Systems

System Identification of a Prototype Small Scale ROV for Depth Control

Temperature Control of a Mold Model using Multiple Input Multiple output Two Degree of freedom Generalized Predictive Control

The Behavior of Systems Involving State Dependent Delays

The Canonical Controller Approach to Data Driven Update of State Feedback Gain

The Design and Production of Thrusters for an AUV Without Rudders

The effect of input current on canard induced mixed mode oscillation in layer II stellate cell

The Effects of Distance In Dynamic Psychological Factors of One Dimensional Queue

The effects of Internal and external disturbances for the hybrid fuzzy fuzzy controller applied to IM Drive
Video Error Concealment for In Vehicle IP based Wireless Networks

Video Segment Retrieval based on Affine Hulls

Video Shots Annotation using Random Forest

Virtual Reference Feedback Tuning Using Closed loop

Step Response Data in Frequency Domain

Vision Based Grasping System with Universal Jamming Hand

Vision based Lane Line Detection for Autonomous Vehicle Navigation and Guidance

Vision based Traffic Accident Detection Using Matrix Approximation

Voltage Oriented Controller Using Dual Loop Control for Power Flow In Distributed Generation Network

Water distribution network modeling based on ARX

Water Mixing Burner Utilizing Sludge Palm Oil

Wheeled Robot Control for Catching Up Flying Objects Using RGB D Sensors

Wireless Network based Operational Optimization and Control for a Class of Industrial Processes
