Message from the President of the Academy of Family Physicians Malaysia

On behalf of the Academy of Family Physicians of Malaysia, I take this opportunity to congratulate our Malaysian Primary Care Research Group (MPCRG) for organizing this 5th Asia Pacific Primary Care Research Conference. The AFPM has always been supportive of the MPCRG as we see it as an important part of the AFPM.

The theme of the Conference “Generating Evidence for Primary Care” is very appropriate indeed as at present this is much lacking in the local context. I sincerely hope that participants, besides learning the finer points in research from the experts, will also come up with research topics that will directly benefit the local primary care scene.

The program which includes topics for the novice as well as the seasoned researchers will provide interesting platforms for discussion for all. It is also hoped that participants will make use of this conference not only for networking but also a platform for sharing their ideas and experiences.

I would like to welcome and wish all delegates, both local and international, a successful and beneficial conference. And do take time off to enjoy the beauty of Putrajaya, the administrative capital of Malaysia.

Best wishes,
Professor Dr Sheikh Mohd Amin
President
Academy of Family Physicians Malaysia

Message from the President of the Family Medicine Specialists Association Malaysia

Research is crucial to all levels of medical services including in primary care. It plays a key role in helping primary care providers to understand, adapt and respond to many clinical challenges we face. Conventionally, research is viewed as the role played by large secondary/tertiary health care institutions, but this is no longer true. Primary care research is growing and incorporating research activities is crucial to ensure high quality and evidence-based primary care service.

The Malaysian Family Medicine Specialists Association (FMSA) has been given the mandate to increase research output in primary care, either as Investigator Initiated Research (IIR) or as Industry Sponsored Research (ISR). FMSA has been actively facilitating research among family medicine specialists, and collaborates with many partners to improve research skills among primary care providers including the Malaysian Primary Care Research Group (MPCRG) of the Academy of Family Physicians Malaysia (AFPM) and the Clinical Research Centre (CRC) of the Ministry of Health (MOH) Malaysia.

The Asia Pacific Primary Care Research Conference is a good platform and meeting point for primary care providers to improve research skills and to disseminate our research findings. Congratulations to the organizing committee for successfully organizing this conference.

Best wishes,
Dr Norsiah Ali
President
Family Medicine Specialists Association Malaysia

Welcome Message from the Organizing Chair

It is our pleasure to welcome delegates to the 5th Asia Pacific Primary Care Research Conference (APPCRC) which is a continuing effort following the success of four preceding APPCRCs since 2009. The participating countries have grown from Malaysia and

Singapore to Hong Kong, Myanmar, Indonesia and other Asia Pacific countries.

In this 5th APPCRC, we have planned programs catering for various levels of primary care researchers. We are still keeping our successful agenda of Research Championship and basic research skills workshops for novice researchers. For the experienced primary care researchers, we have systematic review workshops and panel discussions on research networking. This conference also offers a great opportunity and platform for us to share research findings as well as to build research network with international, regional and local partners.

With these exciting activities, on behalf of the committee, we welcome your participation in this 5th Asia Pacific Primary Care Research Conference. We will attempt to ensure the most memorable scientific and social gathering for all.

Best wishes,

Professor Dr Tong Seng Fah
