Abstract

Previous studies have shown that mobile device is capable of providing navigation aid for both pedestrian and in-car. Crucial to this, is navigation application supported by the mobile platform. This paper proposes a mobile application intended for navigation aid. The application is design using a generic software development process. The application will enable user to navigate within certain vicinity. This will help users to easily find an unfamiliar place. Other function are integrated in the application, such as tasks function for setting the schedule visit, prayer function for du'a and additional information about certain places. The system is developed using the MIT apps inventor software as the main platform, plus the adobe Photoshop for the maps and route purposes. The system works on android platform only. The system is implemented for use in the Kulliyah of Information and Communication Technology (KICT), International Islamic University Malaysia. © 2016, IGI Global.

Chapters in this Book

[View Scopus record for this book](#)

17 Chapters found in Scopus

- A survey on islamic mobile applications for children
- Foreword: Apprehending the nascence and agility of mobile computing
- Foreword
- Preface
- A usable mobile islamic calendar for elderly users
- Social and technical perspective of individual's intention to purchase mobile application
- Collaborative mobile learning: A systematic literature review
- Design of a hospital interactive wayfinding system: Designing for Malaysian users
- Developing a mobile navigation aid
- System usability scale implementation for interfaces on mobile touch screen devices assessment
- Linguistic location authority: An intricate imperative
- Managing students' attendance using NFC-enabled mobile phones
- Mobile water meter system in android environment
- The trend of mobile malwares and effective detection techniques
- Issues related to network security attacks in mobile ad hoc networks (MANET)
- Mobile embedded system: Your door key evolved with your smartphone - A user evaluation of a two-factor authentication
- Unattended sensors in marine environments: Oxybuoy for hypoxia study
