The Connection between Ma`ani Nahwi in Arabic and Modistae in Latin: An Approach to the History of Linguistic Studies

Solehah Yaacob, International Islamic University, Selangor, Malaysia
Abdul Razak Abdul Rahman Al-Sa’adi, International Islamic University, Malaysia
Ataullah Bogdan Kopanski, International Islamic University, Malaysia

Abstract: The research emphasizes on the connection between the Arabic concept of ma`ani nahwi and modistae in Latin. In order to identify this connection, the researcher has to elaborate on the role of Aristotle’s categories in influencing the concept of modistae in the Middle Ages first. The paper will then reevaluate the influence of Muslim philosophers such as al-Farabi (c.870-c.950 AD), Avicenna (980-1037 AD) and Averoes (c.1126-c.1198 AD) in Latin and clarify the role of Jurjani (d.1078 AD) in introducing his concept of nazm towards ma`ani nahwi. The result of the research will also enhance the understanding of the relationship between syntax and semantic which has not been effectively clarified within the framework of traditional Arabic grammatical theory.

Keywords: Connection, Ma`ani Nahw, Arabic Grammatical Concept, The Style of Modistae Thinking, Jurjani and Averoes

Introduction

According to Jurjani, the relationship between syntax and semantics has not been effectively clarified within the framework of traditional Arabic grammatical theory. In his commentary (see Jurjani, Dalail al-`ijaz, 1960, p.66-67) he differentiated between meaning and form in a sentence. This concept is presented not to linguists but theologians (mu`tazilah) in impressing them with the need to study not only theology but also grammar and literary theory in order to improve their understanding of the inimitability of the Qur’an. In this case, the concept of nazm combines three aspects, they are: 1) lafza hamil 2) makna bihi qaaim 3) Ribad lahuma naazim. This contribution showed the intellectual capacity of Jurjani, particularly when he said we could not have the right meaning if not constructed with lafaz and rabat in order to produce a nazm. In other words, for those who are in eloquence or Jasohah style will not produce a coherent sentence unless they combine the group of words according to their concurrence followed by the meaning. Starting from here, we know that he focused more on the system of nazm and movement among the words after their combination. This means that the production of eloquence or fasohah style will not produce a coherent sentence unless they combine the group of words according to their concurrence followed by the meaning. Starting from here, we know that he focused more on the system of nazm and movement among the words after their combination. This means that the production of eloquence or fasohah is not depended on single words only in producing a meaning. In his major contribution to the discussion about the `ijaz al-Qur’an he concentrated on ma’ani (meaning) and lafz (expression). Both concepts have been subject to debate between logicians and grammarians. According to logicians, the meanings are the logical ideas that were signified by the expressions. Otherwise the grammarians concentrated on the functions of the words. According to him, makna was what determined the quality of style, and it would be absurd to attribute qualities of eloquence to the expression as such:

واعمل آن شئا نظرت وجدت سبب الفساد واحدا وهو ظنهم الذي ظنوه في الفض واصلهم الأوصاف التي تحرى عليه كلا أوصافا في نفسه ومن حين هو لفضل وبركة أن يميزوا ما كان وصفا له في نفسه وبين ما كانوا أكسبوه إياه من أجل أمر عرض في معناه

(al-Jurjani, Dalail al-`ijaz, p.256).

“Know that whenever you look into this (corruption of taste and language) you find that it has only one cause, namely their view about the expression and the fact that they assign to the expression attributes (...) without properly distinguishing between those attributes that they assign to them because of something that belongs to its meaning”.

Expression of Meaning

Al-Jurjani on the other hand, maintains that there is a large semantic difference between the two sentences: the verb always expresses movement, whereas the nominal form of the participle a state:-

وإذا قد عرفت هذا الفرق فأنا ليه من فروق

الخير بين الإيتات إذا كان بالاسم وبيه إذا كان بالفعل

وهو فرق كيف يฝذ السحجة في علم البلاغة إليه.

ويبه أن موضوع الاسم على أن بئث به المعنى
in conveying information, and the connected problem of approving and disapproving these, in order to avoid mistakes in the application of speech to what the situation dictates by paying close attention to this”

"Ilmu bayan according to him is “the knowledge of the expression of one meaning in different ways, by referring to it more or less clearly, which serves to avoid mistakes in the application of speech to the full expression of what one wishes to say.” (see Kees Versteegh, Landmarks in Linguistic thought 111, 1997, p. 124) This implies that the science of bayan is the final touch to the conveying of information and cannot be separated from the science of meaning. In other words, the discussion on the introduction of semantic elements needs to be related to the technicality of grammatical aspects. In this sense the ideas of al-Jurjani were just an expression of the feeling of dissatisfaction with the way linguistics was developing, whereby as far as he is concerned, his book dala’il ‘iljaz contains remarks which may be interpreted as criticism of Arab traditional grammarians concerning the relation between word order and meaning. This was also expressed by Ibn Mada’ who complained about useless morphological exercises and theoretical discussions that had nothing to do with the living language (see Ibn Mada’ Ar-Raddu ‘ala Nuhah, p.78).

Here the researcher does not want to state that the system of ‘irab by grammarians is not equipped with the necessary elements to develop the idea of linguistics in Arabic. Rather, the idea needs to be supported by other elements such as a meaning in a semantic concept. To express in differently, there needs to be a collaboration between the concepts as formulated by the logicians and by the grammarians.

We can conclude that the special meaning of nazm exists when the meaning is quoted after the process of entering siyyak siyak such as mubtada’ existed cause of khabar. To exemplify this, al-muntoliq Zaydun means ‘the one who leaves is za- yd’, Zaydun al-muntoliq, Zayd is the one who leaves, fa 3il (agent) existed cause of fe ‘il (verb) and so on. Accordingly, we can say that the originality of al-Jurjani as a rhetorician is very clear when he linked his view on meaning as the determining factor in the quality of a text to a linguistic dimension by considering it not in isolation but always as it is realized within a coherent text composition or cohesion or nazm. This is a key notion of both the dala’il ‘ijaz and asrar al-Balagah ¹. In both works he attempted to define the principle in linguistic term (Kees Versteegh, 1997, p.119).

To support the ideas above, I will enclose some remarks on the system which show that the concept

The idea of semantic as forwarded by Jurjani was taken up by as-Sakkaki (d.1229M) the author of Miftah al-ulum “key of the sciences,” in which he introduced the term ‘ilm al-adab as the name for a new science, which was to embrace all sciences that in one way or another dealt with language. He divided it into three aspects ‘ilm sarf, ‘ilm nahuw and ‘ilm bayan. The innovation is constituted by the third section that about meanings and clarity. He explained the importance of these as follows:-

"أعلام أن علم المعاني هو عن خواص تراكب الكلام في الإفادة، وما يصل بها من الاستحسان وغيرها، ليتحرر بالموضوع عنها في فروع الكلام على ما يقضى الحال ذكره "

“Know that the science of meanings follows the properties of the constructions of the language

¹ Both of the primary kitab by Jurjani.
of meaning is powerful via the concept of 'irab and 'amil. The first example is 3 لَوْ أَحْلَٰلْتُ إِلَى أَحْلَٰلِ قُرْآنٍ فَسَدْ: * 'a'lam* 'amil, the word *wa* 'kun sukun by the thinking of thinkers *tawahhum* 3 sharti (Sibawayh, *al-Kitab*, 3/117) 4 indicates for 'a'lam and 'amil. 'AML of sharti is not in speech or lafaz style but in thinking concept or mawqaf. 'Amal of sharti is *tawfiq* 4 5 where it is accusative and not sukun. This idea has been supported by az-Zamakhshari who said that it resembled *en* akhbari usodiq *wa* 'kun' أَحْلَٰلْتُ إِلَى أَحْلَٰلِ قُرْآنٍ. The researcher assumes 'a'lam *wa* 'kun sukun cause of the *tahcallafa* al-harakah al-ibriyah (Talam Hassan, al-Ighah al-Arabiyyah Maknaha wa Mabnaha, pp 204 – 205).

The second example is accusative cause by the removal of genitive jar an-nazah `ala al-khafid which means the removal of the genitive is a result of accusative on the governor or ma'mul. According to Ibn Malik (see Ibn 'aqil, *Shahr Ibn 'aqil*, 1998, p.19), the accusative case on the governor or ma'mul *ma'mul* which cause by case of removal the genitive in speech or lafaz otherwise in thinking or mawqaf is based on the meaning or called *at-tadamu al-ijah* (Talam Hassan, p.222) such as Allah said in Quran 6 واَخْتَارَ مَوْعِدَهُ أَمَامَ عَمَّانِ رَجَاءً لِمَلَايِتِهِ. *ikht a r* which is a governor of a governor *gawmahu* in thinking called *muf'ulun bih lafit*, it is because the real governor of it is *min* which is generic being removed from the ayaah. However, there is another opinion in its declension or *irab* such as the view of al-Akhfash as-Soghir 7. He said “to remove the generic is not a must, but it permissible to avoid an ambiguous situation, as in: *baraitu al-qalama as-sikkin* the original is *baraitu al-qalama as-sikkin* and *Baraitu al-qalama as-sikkin*. Baraitu is a governor or ma'mul *al-qalama* a governor of the removed original governor or *aqal*. Otherwise Sibawayh (Sibawayh, *al-Kitab*, vol. 1 p.73) did not agree with the idea by saying the cause of the removal of the generic is that the preceding verb became a governor. This opinion is supported by Abu Hayyan (Abu Hayyan, *al-Bahr al-Muhit*, vol. 4, p. 297). The word *ikhtar* govern of two governor or maf'ulani because it is transitive verb or *fe tun muta'addum*.

The third example is the *mufak* on the subject *al 't of *'ala al-mahall* it is *al 'athar al-maknawi* or understand-

2 al-Munafiqun: 10.
3 *Tawahhum* is a synonym for *id ma r* or *taqdir*, which is a central concept of Sibawayhi’s analysis.

Brief History of Modistae

The Modistae (also called speculative grammarians) were a school of grammarians of the 13th century AD (Vivien Law, Grammar and Grammarians in the Early Middle Ages, 1997, p.267). Most of them were active in northern France, Germany, Britain and Denmark, their influence being much less felt in the Southern part of Europe with its opposing tradition of the so-called 'pedagogical grammar'. Their philosophy was based on a tripartite theory of modes via modes of being (modi essendi) or properties of real world entities, modes of understanding (modi intelligendi) of the mind and modes of signifying (modi significandi) or grammatical properties which directly reflected the modi intelligendi. According to Modistae, the various parts of speech were viewed as representing reality in terms of these modes. Thus, modistae stands for those who attempted to trace a systematic relationship between the reality thought and words.

From the 11th century AD onwards, the incorporation of Aristotle’s logic began to play a very important role in the logicisation of grammar. The latter became available from the middle of the 12th century AD (G.L. Bursill-Hall, Speculative Grammars of the Middle Ages, 1971 p.37-38). As a result of this, grammar became associated with the formulation of concepts of reality and the expression of language. However, there were three Latin grammarians who contributed to the grammatical theory of the modistae (1971, p.21): Varro (a grammarian by origin), Donatus (d.350 AD) and Priscian (d.500 AD) had found the significant contributions in the context of medieval grammatical theory. However, there are serious gaps of the development of grammatical theory between the 6th till 11th centuries. Little work had been done by Boethius of Dacia (d.525 AD), Cassiodorus (c.480-c.575), Isidore of Seville (c.560-c.636) and Aelfric of Eynsham. From the darkest period to the intellectual revival of the 12th century, the learning especially of grammar was encouraged by Charlemagne. At that time, grammar as a science had not seen any progress. It was defined as the art of speaking and writing in interpreting the poets (1971, p.23). In the 2nd period of the Middle Ages, grammar came to be regarded as a pre-requisite for all scholarship. This state continued until the end of the 13th century which culminated in the complete philosophy of language of the modistae (G.L. Bursill Hall, 1971, p.23). From this stage, there were four important stages which are closely connected to the intellectual history of this period in as far as grammar is concerned:— the discovery of Aristotle and the associated or concomitant introduction of logic into grammar, the influence of Peter Helias (d.1140 AD) and William of Coches, the triumph of the grammarians over the humanist school such as against the rising influence of logic in the school of Paris and the constitution of speculative grammar establishing. (1971, p.23). So, accounted by influencing these above mentioned stages, we can say that the modistae dealt a lot with logic and words in grammatical concepts. They essentially developed the treatment of parts of speech and the treatment of syntax, which was divided into four parts:— orthography (the elements sound, vix, letters and syllables), etymology

11 As suggested by Langedoen 'the only grammarian of the ancient classical world to deal with the problem of explanatory adequacy'. He lived in the 1st century B.C., maybe he is not the first Roman Grammarian, but with him the Roman contribution really begins.
12 He taught in Rome during the 4th century AD.
13 He taught in Constantinople during the 6th century AD. Book unedited by Priscian's Institutions grammatical was well developed, repertoire of terms to denote a verb or a preposition 'taking' or 'governing' a case i.e. seruerit dative, aidiunq dative and traheret accusative in the early middle ages. See vivien Law, p. 276.
14 He was Flavius Magnus Aurelius Cassidorus, a great cultural personality who is well know to be connected to the founding of university, a centre of teaching and assiduous translation of Greek texts, endowed with a vast library of sacred and secular texts consists of two books, 'Institutiones quemadmodum divinae' and 'humanae debeat intelligi lectiones' (c.551-c.562) dealing with the sacred disciplines indicates the literary tools necessary for the study of Bible, while the 2nd book concentrates on secular disciplines. Another popular work was the De Orthographia' aimed primarily at monastic instruction, see Giulio Lepschy, 1994, p.151.
15 Isidore, Bishop of Seville, his book 'Etymologiarum sive originum libri xx' were enormously popular in the medieval world, edited two volumes by Lindsay 1911, see Giulio Lepschy, 1994, p.157.
16 Aelfric was born around the middle of the tenth century in Wessex, the first stages in his training took place under priest whom he remembered with some disdain in later years. In terms of grammar he studied at the same stage under Dunstan and was ordained by him, in 987 he moved to the newly founded monastery of Cerne Abbas, Dorset where he was in charge of teaching in 1005, he became abbot of Eynsham, near Oxford, where he remained until his death in or after the year 1010. He was a prolific author and translator. See G.L. Bursill Hall, 1971, p.22 and Vivien Law, p.202.
(part of speech), diasyntethica (syntax) and prosody (Giulio Lepschy, *History of Linguistics Classical and Medieval Linguistics*, 1994, p.290). All of the modistae’s studies of grammar tended towards syntax, which connected to speech or sound where it related to philosophical thinking as a sign to create a meaning (1994, p.290). This means that the relationship between logic and grammar had a profound impact on the modistae grammatical theories. On this basis, clearly the modistae were influenced by the metaphysical theory of reality when discussing the terminology to describe the word classes such as nomen (noun) and pronomen (pronoun) (G.L. Bursill Hall, 1971, p.40). A ‘word’, to them, was not entirely a figment of the mind but it helped to illustrate things inside the mind. In other hand, ‘word’ is not entirely a figment of the mind but must have something correlating in the world of things outside out the mind.

In contrast to Chomsky’s TG (Transformational Grammar), the Modistae always took the relationship between syntax and semantics as closely linked. They called grammatical features modi significandi because they saw each feature as an aspect of the way meaning is encoded. This stands in contrast to a transformational concept where each sentence has only one sentence. According to Prof. Bursill Hall, the medieval way of understanding gave rise to ‘two quasi-parallel types of analysis’ namely the logical, which was concerned with the meaning of terms within a particular context, and the grammatical which was concerned with linguistic structure (See Alain De Libera, ‘On some 12 th and 13 th century doctrines of Restriction in studies in Medieval linguistic thought’, 1980, p.131). To support this idea Alain De Libera has highlighted that the logical analysis by means of ‘restriction’ fundamentally aims at connecting the grammatical surface structure and the logical deep structure within the way field of logic.

**Meaning as a Logical Approach**

The Modistae Grammar concept as a dependency framework does not provide phrase structure rules. Each word to word link is called a construction and there are two criteria of headship. The syntactic head, called *primum* or *pruis* 17 is the governor or the modified element, and the semantic head, or *terminans*, supplies or points the way to the referent.

Let us discuss a minor concept in the construction of the modistae concept in sentences, such as the construction of ‘homo currit’ ‘The man runs’ is an intransitive construction in which a verb has an immediate dependence on the substantive which represents the first constructable. In analytic approach, it would be considered as follows: There is at least one individual, a man, and he is running; or more simply: Something that was a man (regardless of whether it still is or not) has run, or there is at least one individual, which is a man and that it has been the case that he is running, or more simply. Something that is now a man has run. (Alain De Libera, 1980, p.139-140). Otherwise, in ‘homo currit bene’. ‘the man runs well’ the adverb is drawn back to the substantive through the verb. ‘Homo albus currit bene’ ‘the white man runs well’ is an intransitive construction in which adjective and verb are immediately dependent on the substantive, and the adverb is dependent on it through the verb (Giulio Lepschy, 1994, p.298).

However, in transitive construction such as Socrates currit means Socrate runs, the subject term ‘Socrate’ supposits for a man. Otherwise the intransitive construction (a parte post) is presented as a relation between determinable and determinant such as *homo est animal*, man is an animal (1994, p.298). However, there were several debates between them (the modistae scholars) toward this issue, according to Martin of Dacia the construction of acts 18 and construction of person 19 does not seem to present problems such as Socrates et Plato curunt means Socrates and Plato run, linguistically two nouns are one suppositum (noun phrase). The conjunction of *si Socrates currit* means If Socrates runs, according to him if he runs he moves (1994, p.299). However this idea has been commented by Boethius of Dacia saying that a conjunction does not in construction but only a connector between the words in the sentence, so it is not a constructable. Being constructable, it must be a mode of signifying grammatical properties reflected to the mind. However, Radhulplus adopts the fundamental distinction between intransitive and transitive construction. This can be divided into four basic constructions: -intransitive construction of acts such as Socrates currit, Socrates runs, intransitive construction of persons such as *homo albus*, white man, transitive construction of acts such as *lego librum*, I am reading a book, and transitive construction of persons such as *capra Socrates*, Socrates’ cloak (1994, p.299). Another type of construction such as *vado in ecclesiam*, I go to church, the preposition here is considered a medium of the construction of the verb with the complement and assigned to the complement which is *ecclesiam* or church or linguistically called terminals or determinator. Otherwise, the two main constructables such as *homo albus currit* and *homo currit bene*, the adjective *albus* and the adverb *bene* are determinants.

---

17 In Arabic called *al-amin al-lafzi* and *al-amin al-maknawi*

18 Verb

19 Noun
In another case, Thomas of Erfurt believed the concept of suppositum (noun phrase) and appositum (verb phrase) such as Socrates percutit Plato, Socrates bit Plato, depends on the term of verb either oblique\(^20\) or not which follows it in a verb + oblique construction (1994, p.300). Therefore, he concentrated on the meaning of the word in the sentence. Actually, we do not want to put ourselves in these polemic issues between the ideas of Radulfus and Thomas of Erfurt in their different analyses of the construction. As a result of the statement above, we can conclude that the semantics of the modistae puts sense in distinction between formal meaning and material meaning. Where formal meaning is stable, could be defined by the nature of words. Otherwise, the material meaning cannot be properly determined by the context.

We can say, the aim of the grammarians to explore how a word matched things apprehended by the mind and how it signified reality was quite successfully realized. Since a word cannot signify the nature of reality directly, it must stand for the thing signified in one of its modes or properties such as being, understanding and signifying; it is this discrimination of modes that the study of categories and parts of speech is all about. Thus the study of sentences should lead one to the nature of reality by way of the modes of signifying.

The Role of Arab Logicians in Enhancing the Concept

Even though, some of the modesties claimed that the idea of modistae was taken from the idea of Aristotle directly, we cannot deny the contributions of Arab logicians – whereby they lived in the golden period of Muslims-enhanced the concept of meaning in the sentence structure. This statement has been supported by Prof. Bursill Hall when his statement was “Nevertheless, the attention paid to syntax by the grammarians of the later 12th century laid the basis for the continued close association between logic and grammar, a relationship fruitful enough to create a logical grammar within the domain of grammar and which culminated in the speculative grammars of the modesties. This was a development from the result of the full assimilation of the ‘new’ Aristotle and the works of the Arab logicians’ (1971, p.29).

Charles E. Butterworth in his book highlighted the similar statement by saying “Aristotle’s writing found a much more receptive audience on the other side of the Mediterranean as learning on his writings flourished in Constantinople, Edessa and Antioch. When the School of Alexandria was forced to close, it moved to Antioch in Syria. In the 6th century, many of Aristotle’s writings had been translated into Syriac. This activity continued until some of Syriac translations were rendered into Arabic. In the 10th century, the school moved to Baghdad” (Charles E. Butterworth, Averroes’ Middle Commentaries on Aristotle’s Categories and De Interpretatione, 1983, p xi). This statement has been proved by Ahmad Amin when he introduced a number of specialists translated Greek philosophy and science within Islamic world such as Hunain bin Ishak, Yahya bin Bitriq and Ibn al-Muqaffa’ (Amin, Ahmad, Dhuha al-Islam, vol 1, pp 298 and 313).

Due to, the translation of Greek philosophy had gone through a process of serious endeavours when the translation from Arabic\(^21\) into Hebrew occurred in the time of Islamic Spain and then into Latin in the middle of the 12th century. Prior to this, the writings of Aristotle were unknown in Western regions. In the East, they had been studied and commented by al-Kindi, al-Farabi and Ibn Sina, then in the beginning of 13th century followed by Averroes. Even after the Latin conquest of Contantinople in 1204 and the discovery of new Greek manuscripts, the most complete translations of Aristotle’s works were still those done from Arabic (Charles E. Butterworth, 1983, p xi).

The researcher wants to highlight some of the tremendous contribution of Averroes in enhancing the ideas of Aristotle when he translated the ‘Categories’ in his ‘Middle commentary on Aristotle’s categories’, thereby giving a big impact on the development of the modistae in Europe and, as it seems, the starting point in the progress of understanding Aristotle’s categories in the Middle Ages. In supporting the idea, Charles E. Butterworth wrote ‘without exaggeration, the beginnings of scholarship in the later middle ages can be traced to the effect this newly found legacy had upon western Europe, especially to the effect it had upon such important thinkers as John of Salisbury, Saint Thomas Aquinas, Albertus Magnus and Roger Bacon’ (1985, p.xi). Averroes, in his commentary tried to present that the ‘uncombined utterances which denote uncombined ideas necessarily denote one of ten things either substance or quantity or quality or relation or where or when or position or to have or doing or being acted upon’ (Charles E. Butterworth, 1983, p.30). According to our understanding from his view, in order to start something he gave an example of man and horse where to differentiate between human and animal, as both of them have relationship of depending on each other, as in ‘Zayd rode a white horse last year’. The words Zayd and horse are understood by the listener when they have been combined. It also gives

---

\(^{20}\) Similar in Arabic Grammar called al-fi’il al-muta’ddi

\(^{21}\) Arabic and Syriac translations were based on Andronikus Greek edition of Aristotle writings.
a new meaning when it comes with the new word 'white', it is a white horse, the word white showed the concept of quality in the sentence and is called adjective. The analysis shows that he concentrated more on meaning where it has a relation with the concept of thinking, i.e. there is relation between words and mind which depends on the logic of utterances when combined. This statement is look like the nazm introduced by al-Jurjani in his book Dalaila al-ijaaz when the understood that the sentence is depending on the connection of meanings in utterances. This is highlighted in part two, chapter 14 of Averroes' commentary on the "Categories". On the other hand, the statement and supposition do not admit truth and falsehood in as far as the thing to which the supposition refers outside the mind is itself altered, for example, the supposition that Zayd is sitting is indeed true when Zayd sits and false when he stands' (1983, p.43). What he tried to analyze here is similar to the concept of logic when the action of something needs to be confirmed with the correct word of the action and not vice versa.

In conclusion, the connection between Maʿani an-Nahwi in Arabic and the idea of Modistae in Latin is able to prove that the relationship between the concept of thinking in Arabic grammar and semantic, and the concept of modesties – without exaggeration – existed especially when some of the learned men from Latin were students of Averroes have previously been called Averroists. This has been stated in the Opus Majus.:

"After Avicenna Came Averroes a man with a solid doctrine, who corrected the sayings of his predecessors and whose contribution is great... The philosophy of Averroes long neglected, rejected and re-proved by the most famous doctors today wins the unanimous approval of the wise man. The 14 th and 15 th centuries, the influence of Averroes in Europe grew so strong that his works replaced those of Aristotle in the curriculums of European universities. John Baconthorpe of England (d.1340) was so well versed in Averroism that he was called "Prince of the Averroist". In 1473, Lois XI of France regulated the study of philosophy in his realm, designated the works of Aristotle and Averroes as the only allowable philosophical texts. At the university of Padua, Islamic philosophy in general and Averroes in particular were taught until the 17 th century. In the

13th century, the Christian priesthood became worried about the propagation of Averroism, which was presented in Europe as the belief in the identity of intellect among all humanity, the negation of the knowledge of particular qualities in God, destruction of Divine providence in the sublunary world, and the affirmation of two distinct and contradictory orders of knowledge of faith and the knowledge of reason (H.Zainal Abidin Ahmad, Riwayat Hidayat Ibnu Rushd Filosuf Islam Terbesar di Barat, Jakarta: Bulan Bintang, 1975, p.18).

Summary

This research will compare the Arabic concept of Maʿani Nahwi and the Latin idea of Modistae. According to Jurjani (d. 471H/1078m) the relationship between syntax and semantic has not been effectively clarified within the framework of traditional Arabic grammatical theory. In his commentary he differentiated between meaning and form in sentence. This concept is presented not to linguists but theologians in impressing them with the need to study not only theology but also grammar and literary theory in order to improve their understanding of the inimitability of the Qur’an. In this case, the discipline of grammar has to be reformed first. However, the need of context is a must because only when the context is properly ordered (Nzm), can there be eloquence and excellent style. The proper ordering refers to a correspondence between the meaning in the mind and the words in the sentence. This is similar with the concept of Modistae, whereby a modista believed each constituent of reality has modes of being which determine the number of ways in which it can be correctly conceptualized and signified. A modista explains the essential nature and purpose of human speech and the ways in which words have meaning. In conclusion, the Arabic concept of Maʿani Nahwi and the Latin idea of Modistae are relatively similar. This paper will analyse the concurrence of ideas among Arab and Europe scholars between the ninth and thirteenth centuries C.E.. It will assess the possibility of transmission of Maʿani Nahwi into the concept of Modistae. It assumes that Muslim Spanish influence during the second Umayyad Caliphate may account to this trend.
