Abstract

The scientific thinking in Islamic tradition is inspired by genuine sources Divine revelation. It is mode of a systematic inquiry that triggered by the principles of the Islamic worldview and guided by the common thought of Muslim intellectual's community. Both, the proper understanding of the sources and conscious application of the principles of the worldview are essential to maintain the spirit of scientific thinking. The terminal goal of systematic inquiry in Islamic tradition is to utilize forces of the temporal for the Absolute, but achieving this noble goal is not possible without proper understanding of both the natural and human phenomena. This paper investigates the conceptual and rational frameworks of scientific thinking in Islamic tradition. Utilizing the analytic approach of qualitative method, the paper aims to study both the cognitive (epistemic) and conventional (social) aspects of scientific thinking based on Qur'anic perspective.

Keywords: systematic mind, scientific thinking, rational framework, Islamic worldview, systematic inquiry, epistemology, strategic approach
