Enhancing Academic and Research Quality

November 21 – 25, 2016
21 – 25 Safar 1438H

Kulliyyah of Allied Health Sciences
IIUM Kuantan Campus, Pahang
APPRECIATION

The Kulliyyah of Allied Health Sciences expresses its sincere gratitude and appreciation to all parties and many individuals who have contributed towards the success of the 2nd KAHS Research Week 2016 and the 1st Allied Health Scientific Colloquium 2016.

Foreword
Assalāmu'laikum Warahmatullāhi Wabarakātuh,

Welcome to the 2nd Kulliyyah of Allied Health Sciences (KAHS) Research Week (KRW) 2016 in conjunction with the 1st Allied Health Scientific Colloquium (AHSC) 2016 where we are once again celebrating the scholarly tradition in the forms of knowledge exploration and discourse. Alḥamdulillāh and congratulation to everyone for the organization of the event. The 2nd KAHS Research Week 2016 and the 1st AHSC 2016 shall provide an avenue for discussion, knowledge sharing and collaboration between all the Kulliyyah members in the areas related to allied health sciences. It is hoped that constructive comments and/or suggestions will help enhance the academic and research quality in the Kulliyyah. We pray to The Almighty Allah subḥānahu wa ta‘āla to bestow His wisdom upon us to use our potential and mental faculties at the best possible level with higher level of Imān.

Thank you. Have a great session.

Wassalām.

A Review on Radiation Effects towards Cell Culture

Nur Farhana Mat Nawi¹, Zainul Ibrahim Zainuddin² & Munirah Sha’ban¹

¹Department of Biomedical Science, Kulliyyah of Allied Health Sciences, International Islamic University Malaysia
²Department of Diagnostic Imaging and Radiotherapy, Kulliyyah of Allied Health Sciences, International Islamic University Malaysia

ABSTRACT

Effects of radiation on tissues and organs are well documented. However recently, radiation was used as an evaluation tool to assess newly formed engineered tissue reconstruction and regeneration. This raises questions on the positive application of radiation, amidst the usual discussions pertaining to the risks of radiation. Furthermore, the effects of radiation have yet to be established in primary cell culture. The objective of this review is to identify and evaluate previous works that examined the possible effects of radiation on cells. Emphasis is placed upon the effects of radiation on primary cell cultures in tissue engineering (TE). The SCOPUS databases were searched for articles published from 2001 to 2016. “Radiation” and “cell culture” were used as search terms either in the title, abstract or keywords of the articles. Thematic analysis was performed on the 5031 retrieved articles. Filtering for “radiation effects” in the title, 4139 articles were identified. Within these results the key search term was further narrowed down to “tissue engineering area”. 1164 articles were identified which were then subjected to key search term within “primary cell culture”. A total of 334 articles were abridged that were subjected to further thematic classifications. Within these classifications, 291 articles were summarized to fulfil the objectives of the review. The results show a certain trend towards the incompatible effect of radiation on primary cell culture. Work is in progress in filtering the keywords further to narrow the scope to radiation effects on chondrocytes in the title, abstract or keywords of the articles. This review will present the possible effects of radiation on primary cell culture. It is hoped that this review will be able to outline the current knowledge on the effects of radiation on primary cell cultures and to improve the understanding of those effects on cells in general.

KEYWORDS: Radiation, Primary Cell Culture, Growth, Radiation Effects, Review
