Abstract

The "Queen of Fruits" mangosteen (*Garcinia mangostana* L.) produces commercially important fruits with desirable taste of flesh and pericarp rich in xanthenes with medicinal properties. To date, only limited knowledge is available on the cytogenetics and genome sequences of a common variety of mangosteen (Abu Bakar et al., 2016 [1]). Here, we report the first single-molecule real-time (SMRT) sequencing data from whole genome sequencing of mangosteen of Mesta variety. Raw reads of the SMRT sequencing project can be obtained from SRA database with the accession numbers SRX2718652 until SRX2718659.
