Abstract

View references (19)

Islamic structured product is a shariah-compliant asset class that is considered as an innovation in the financial market. In view of the increasing presence of Islamic finance in the global financial scenario, research on Islamic structured product has captured substantial interests among the investment community searching for new alternatives, particularly during uncertain market conditions. This study aims to serve as one of the pioneering empirical references for investors to evaluate Islamic structured investments, and for the regulators to strengthen the regulatory framework for such products in order to continuously protect investors' interests and provide a conducive environment for further growth of the Islamic finance industry. © 2017, Statistical Economic and Social Research.
