P.O. Box 10, 50728 Kuala Lumpur, Malaysia

CONTENTS

Contents.....	v
Tables.....	viii
Figures.....	x
Symbols.....	xii
Abbreviations.....	xiv
 CHAPTER ONE:	
INTRODUCTION.....	1
 CHAPTER TWO: CORNEA, PTERYGIUM AND	
GRADING SCALE.....	5
 CHAPTER THREE: METHODOLOGY.....	20
 CHAPTER FOUR: RESULTS AND DISCUSSION..	33
 REFERENCES.....	44

TABLES

Table 2.1	CIELuv interpretation.....	15
Table 2.2	HSI colour space interpretation.....	18
Table 4.1	Results of entropy measurements extracted from different colour spaces.....	36

FIGURES

Figure 1.1	Common image-based clinical grading framework	3
Figure 2.1	The anatomy of the cornea.....	5
Figure 2.2	Pinguecula.....	7
Figure 2.3	An advanced case of pterygium.....	8
Figure 2.4	The extent of variations in human grading.....	11
Figure 2.5	Additive colour mixing.....	13
Figure 2.6	Diagram of CIELuv.....	15
Figure 2.7	CIELuv diagram.....	16
Figure 2.8	HSI Colour Space.....	17
Figure 3.1	Block diagram of the overview of the research.....	22
Figure 3.2	Reference images for grading purpose.....	23
Figure 3.3	Online form to collect data from graders.....	24
Figure 3.4	Histogram of a grayscale image.....	26
Figure 3.5	Example of Entropy is an indicator of randomness.....	27
Figure 3.6	Custom computer software based on MATLAB used to extract entropy from different colour space. (a) RGB colour space (b) HSI colour space (c) YUV colour space (d) XYZ colour space.....	29
Figure 3.7	Performance evaluation of machine grader using split data validation on RAPID MINER.....	31
Figure 3.8	Artificial neural network model construction on RAPID MINER using all data.....	32
Figure 4.1	Quartile analysis of the graded images.....	33

Figure 4.2	Bland-Altman plot of Grader S against the ground truth.....	34
Figure 4.3	Bland-Altman plot of Grader F against the ground truth.....	35
Figure 4.4	Bland-Altman plot of Grader R against the ground truth.....	36
Figure 4.5	Artificial neural network model.....	40
Figure 4.6	Bland-Altman plot of output of neural network against the scores graded by Grader R.....	41

MODELING PERCEPTION OF FIBROVASCULAR REDNESS

Pterygium has a worldwide distribution and more common in warm and dry climates especially in countries such as Philippines, Myanmar, South Thailand and Peninsular Malaysia which are originated near the equator belt of the earth and less than 2% in altitudes. Pterygium was more commonly observed in those who worked outside, and it was positively correlated with lower latitudes and high ultraviolet levels (Taylor, 1980). There is another study suggests that pterygium can induce corneal astigmatism. When primary pterygium reaches more than 1.0 mm in size from the limbus, it induces with-the-rule significant astigmatism ($>$ or $=$ 1.0 dioptre) (Avisar, Loya, Yassur, & Weinberger, 2000). One of the causes of the red eye is pinguecula or pterygium. Pterygium is a non-malignant and a slow growing proliferation of wing shaped fibrovascular tissue originating on the conjunctiva and extending onto the cornea. This condition later will disturb the vision (Galor & Jeng, 2008). Symptoms of pterygium include foreign body sensation, persistent redness from smoking and air pollution from vehicles and factories. Besides, other symptoms of pterygium also include inflammation of the eyes, tearing, which can cause bleeding, dry and itchy eyes. In more advanced cases the pterygium can affect vision as it encroaches the cornea with the potential of obscuring the optical centre of the cornea and inducing astigmatism and corneal scarring (Hood, 2009). Moreover, pterygium may cause significant alteration in visual function in some advanced cases.

NORFAZRINA ABDUL GAFFUR is a post graduate student at the Kulliyyah of Allied Health Sciences of International Islamic University Malaysia.

MOHD ZULFAEZAL CHE AZEMIN is a Associate Professor at the Kulliyyah of Allied Health Sciences of International Islamic University Malaysia. He received his Bachelor's degree in Computer Engineering from Multimedia University and his Master of Biomedical Engineering from Monash University, Clayton Campus. He completed his Ph.D in Biomedical Engineering at RMIT University, Melbourne. His thesis project was on the analysis of retina images at grayscale level using Fourier Fractal Dimension technique for 10-year stroke risk prediction.
