Proceedings of the 2018 7th International Conference on Computer and Communication Engineering, ICCCE 2018

16 November 2018, Article number 8539337, Pages 372-374

7th International Conference on Computer and Communication Engineering, ICCCE 2018; Kuala Lumpur; Malaysia; 19 September 2018 through 20 September 2018; Category numberCFP1839D-USB; Code 142740

Discrimination of Residual and Recyclable Household Waste for Automatic Waste Separation System (Conference Paper)

Abstract

[View references \(8\)](#)

Most of the countries in the world are confronting a gigantic issue of waste management system. Due to the rapid urbanization and increasing population, huge volume of waste is produced year by year. Improper waste management system has created a deep concern among people which lead to disturbance to the environment and human health. In this paper, a fully automated system that discriminate residual and recyclable household waste is proposed. It is shown that the prototype system are able to automatically separate waste into residual and recyclable waste by employing a moisture sensor to sort them into wet (residual) and dry (recyclable) waste. The state of the waste is determined by its resistance to current value and the percentage of water content. © 2018 IEEE.
