Abstract

The aim of this paper is to study the new application of Haar wavelet quasilinearization method (HWQM) to solve one-dimensional nonlinear heat transfer of fin problems. Three different types of nonlinear problems are numerically treated and the HWQM solutions are compared with those of the other method. The effects of temperature distribution of a straight fin with temperature-dependent thermal conductivity in the presence of various parameters related to nonlinear boundary value problems are analyzed and discussed. Numerical results of HWQM gives excellent numerical results in terms of competitiveness and accuracy compared to other numerical methods. This method was proven to be stable, convergent and, easily coded.

Keywords

Author Keywords: Fin problem; Temperature-dependent thermal conductivity; Haar wavelet; Quasilinearization method; Nonlinear equation
KeyWords Plus: HOMOTOPY-PERTURBATION METHOD; ADOMIAN DECOMPOSITION METHOD; CONVECTIVE STRAIGHT FIN; DIFFERENTIAL-EQUATIONS; INTEGRAL-EQUATIONS; LAPLACE TRANSFORM; EFFICIENCY; SURFACE
