Abstract: The research focuses on the effectiveness of the syntactical regulator in providing meaning in the Arabic Syntax and attempt to explain semantic changes resulting from phonetic changes in word endings, especially with respect to vowels. It further looks into the dynamics which bring about such changes in phonetics and evaluates the significance of the altered meanings from the viewpoint of semantics. In order to interpret semantic changes, Classical Arabic denotes eight cases as the determinants or basis for the change at the level of the mind that lead to transformation as an anonymous process for comprehending speech utterances. The dynamics of the above process provide the orientation effecting precise and accurate meaning bearing upon the entire sentence construction comprehensively. Thus, the research purpose is to demonstrate the underlying inner structure providing the dynamism and process preceding production of verbal utterances intrinsic within the Arabic Syntax.
