Abstract

View references (26)

Objective: To investigate the reasons and pattern of tooth extraction among patients attending International Islamic University Malaysia, Kulliyah of Dentistry Polyclinic. **Materials and Methods:** This is a retrospective study. The patient's age, gender, race and reason for tooth extraction were recorded. **Result:** A total 1,036 teeth were extracted. Caries was the main reasons for 53.3% of extractions. The highest number of extraction was observed at age of 21 to 40 years old (44.4%) Females had 56.6%. Malay showed highest extraction case, 85.2%. **Conclusion:** Dental caries is the main reason for tooth extraction among patients attending IIUM Kulliyah of Dentistry Polyclinic. © 2019 Elsevier Ltd.
