Abstract

View references (36)

In continuation of our study of Sumatran plants and the bioactivity of their constituents, *Stereocalon halei* Lamb (Stereocalaceae) was extracted and isolated to obtain atranorin (1), lobaric acid (6), and methyl-β-orcinol carboxylate (9). We also prepared methanolic extracts of some Sumatran medicinal plants, i.e. *Alpinia denticulata*, *Alpinia malaccensis*, *Alpinia submutica*, *Curcuma zedoaria*, *Centella asiatica*, *Mangifera indica*, *Piper crocatum*, *Mussaenda frondosa*, together with previously isolated compounds, i.e. crocatin A (2) and crocatin B (3) from *P. crocatum*, curcumin (4) from *Curcuma longa*, demethoxymatteucinol (5) from *Sphaerostephanos polycarpus*, mangiferin (7) from *M. indica*, methyl caffeate (8) from *Balanophora elongata*, tiliroside (10) from *Guazuma ulmifolia*, and usnic acid from *Usnea* sp (11). These extracts and compounds were tested for their cytotoxicity against MCF-7 and HSC-3 cell lines by MTT assay (3-(4,5-dimethylthiazol-2-yl)-2,5-diphenyltetrazolium bromide). It was found that the IC₅₀ value of atranorin (1), lobaric acid (6), methyl-β-orcinol carboxylate (9), and methanolic extract of *A. submutica* towards the MCF-7 cell line was 208.20 μM, 172.05 μM, 382.60 μM and 70.95 μg/mL, respectively. The IC₅₀ value of lobaric acid (6) and methyl-β-orcinol carboxylate (9) against the HSC-3 cell line was 88.92 μM and 260.09 μM, respectively. The other extracts did not show significant cytotoxicity. © 2019 Published by ITB Journal Publisher.

The authors gratefully acknowledge the research grant of the Ministry Research, Technology and Higher Education of the Republic of Indonesia received by DA under the DP2M-DIKTI Competence Grant 2015-2017. We thank the Ministry of Health of the Republic of Indonesia for the use of the Indonesian Herbal Pharmacopoeia markers from the BBO and BBOT projects, Dr. Nurainas from the Herbarium of Andalas University (ANDA) for the identification of the plant specimens, and Professor Hamburger from the University of Basel, Switzerland for the NMR spectra of compounds 1, 6 and 9.
