7th International Conference on Behavioral Addictions June 20–22, 2022 Nottingham, United Kingdom

Plenary lecture	1
Symposiums and parallel sessions	5
S-1A – Current opinions in research on online addictive behaviors	5
S-1B – ADHD and behavioral addictions	9
S-1C – Clarifying the role of reinforcement, motivations, reward sensitivity and impulsivity in gambling disorder	13
S-1D – Social media use – miscellaneous	16
S-1E – Problematic mobile phone use	20
S-1F – Psychology of gaming behaviour	24
S-1G – Gaming interventions	28
S-2A – Assessment issues in gaming and internet use	32
S-2B – Compulsive sexual behavior disorder: Examining biological, epidemiological, treatment interventions, and clinical correlates among help seeking populations	36
S-2C – Associated factors in gambling disorder	42
S-2D – Impulsivity and compulsivity in behavioral addictions	45
S-2E – Adolescents and emerging adults suffering from Internet use disorders	49
S-2F – Gaming and internet use	53
S-2G – Eating disorders	58
S-3A – Cross-cultural studies on compulsive sexual behaviors	63
S-3B – Issues in behavioral addictions	69
S-3C – Gambling treatment	74
S-3D – Interface of internet, social media and alcohol use	79
S-3E – Buying-shopping disorder: Conceptualization and underlying mechanisms ..	82
S-3F – Gambling – miscellaneous	86
S-3G – Exercise addiction	90
S-4A – Reducing gambling related harm	94
S-4B – Advances in the etiology, assessment and treatment of compulsive sexual behaviors	98
S-4C – Gambling and gambling disorder: from basic to applied science	103

S-4D – Current developments in research on problematic social networks use: affective and cognitive mechanisms	108
S-4E – Work addiction	112
S-4F – Behavioral addictions in young people and adolescents	115
S-4G – Recovery from addictive behaviors	119
S-5A – Women and Behavioural Addiction – New paths in research and treatment ..	123
S-5B – Biological mechanisms underlying problematic pornography use and compulsive sexual behaviors	129
S-5C – Broadening our horizons: Exploring sports betting behaviors, gambling motives, barriers to care for help seeking, and cultural considerations for diverse populations	133
S-5D – Prevention and treatment of internet-related problems	138
S-5E – Gaming, gambling and other addictive disorders	143
S-5F – Psychology of gambling behavior	148
S-5G – Psychosocial factors in behavioral addictions	153
S-6A – Behavioral addictions – miscellaneous	158
S-6B – Psychological and neuroscientific findings related to problematic pornography use	163
S-6C – Gambling and gaming	167
S-6D – Problematic use of social media and smartphone in eastern and western contexts	171
S-6E – Gaming and the family	176
S-6F – Social media use	180
S-6G – Round table: Women and behavioral addiction – New paths in research and treatment	184
S-7A – Context matters: Exploring relationships between compulsive sexual behavior and morality	189
S-7B – Understanding compulsive sexual behavior in women	194
S-7C – Profiling gaming disorder: Cross-addictive comorbidities, identification, prevention and treatment	200
S-7D – Assessment of problematic internet and social media use	205
S-7E – Online gambling	210
S-7F – The trajectory of cyber addictions: Current postulations and new avenues of interest in the behavioral addiction framework	214
S-7G – Coping strategies during the COVID-19 lockdown: A multicultural study on self-related risks	217
S-8A – Issues in internet addiction	222
S-8B – Sexuality related addictive behaviours	227
S-8C – The relevance of game transfer phenomena in the context of gaming disorder	231
S-8D – Pornography use	236
S-8E – Social media use and well-being	241
S-8F – Treatment issues in gambling	245
S-8G – Hidden pandemic: Handling behavioral addiction during COVID 19 chaos in low middle income country	248

Mini talks	252

MT-2E1**The use of mobile devices by children under 6 years old in Poland**

MAGDALENA ROWICKA¹, MICHAŁ BUJALSKI²*

¹The Maria Grzegorzewska University, Poland

²Warsaw University, Poland

*E-mail: magda.rowicka@gmail.com

Background: The use of the Internet, smartphones, tablets, smartwatches by small children is under-investigated. However, some studies show that, if used excessively, it may have a negative impact on a child's development. The aim of this study was to investigate the use of mobile devices by children under 6 in Poland. *Method:* 2000 participants took part in the study - parents of children under 6 years old. The sample was representative with regard to age, sex and place of residence of children. *Results:* Over 50% of children use mobile devices and the percentage increases with age. Children usually use mobile devices alone or under the supervision of parents. Mobile devices are given as a reward or taken away as a punishment but in general, parents treat them as a substitution for their attention. The use of mobile devices is mainly related to the lack of time. Parents are mainly afraid of age-inappropriate content. Parents notice various negative consequences of their children use of mobile devices such as disturbed sleep, being the anxious or compulsive need for the device. There is a correlation between how early children initiate the use of mobile devices and how technologically advanced parents are (the more advanced parents are, the older age of technological initiation of their children) *Conclusion:* This study shows a great need for information-based campaigns explaining how to use mobile devices safely and what to do in order to avoid negative developmental consequences for children

Keywords: mobile devices, children, compulsive use

MT-2E2**Screen media dependency among pre-school children in Kuala Lumpur and its associated factors**

AZWANIS ABDUL HADI, NURUL AKMAL ABD LATIP, SUHAIZA SAMSUDIN, EDRE MOHAMMAD AIDID, ROZANIZAM ZAKARIA*

*E-mail: azwanis@iium.edu.my

Introduction: Earlier and prolonged screen media exposure to young children is associated with negative health concerns. Not much is known about screen media dependency among preschool children. This study aimed to measure its prevalence and associated factors among preschool children in Kuala Lumpur. *Methods:* A cross-sectional study was carried out at registered preschools in Kuala Lumpur. 300 parents of preschool children aged 4 to 6 years old who fulfilled the inclusion and exclusion criteria were recruited via simple random sam-

pling. The newly developed Screen Dependency Score (SDS) assessed their dependency on screen media. Descriptive and bivariable statistics were analysed using IBMSPSS version 27. *Results:* The prevalence of screen media dependency among preschool children in Kuala Lumpur was 65.7%. Multiple logistic regression found that a preschool child who used a smartphone [OR (95% CI) 2.735 (1.244 - 6.013), p-value 0.012], whose parents used screen media to resolve quarrel among their children [2.855 (1.187 - 6.868), p-value 0.019], children who had more than 2 hours screen time over the weekend [2.261 (1.058 - 4.830), p-value 0.035] and children with television in their bedroom [5.562 (1.591 - 19.442), p-value 0.007] were found to be more likely to have screen media dependency. Meanwhile, active co-use as a parental mediation strategy was found to be protective [0.505 (0.302 - 0.845), p-value 0.009]. *Conclusion:* Screen media dependency among pre-school children is a public health problem that needs to be addressed. It is hoped that these findings will create more awareness and provide the basic data needed to create preventive measures.

The aim of our study was to determine the effectiveness of art therapy in the psychological prevention of Internet addiction in adolescents with certain personality traits. We believe that if Internet addiction is formed in adolescents with low self-esteem, self-doubt, personality anxiety, impulsivity, then its psychological prevention is possible using an art-therapeutic psychological and pedagogical program for the prevention of Internet addiction in adolescents. A total of 55 adolescents (13–14 years old) - active Internet users took part in the study. Of these, 26 are girls and 29 are boys. In our study, we used such techniques as: 1. Scale of Internet-addicted behaviour (Chen Internet addiction Scale, CIAS), tested and adapted for Russian subjects V.L. Malygin and K.A. Feklisov – was used to identify adolescents' Internet addiction or addiction to it. 2. The teenage version of the multifactorial methodology of R.B. Kettle – was used to identify the personality traits of adolescents with Internet addiction or a tendency to it. 3. Questionnaire "Teenager and social networks" (O. A. Sevastyanova). According to the results of a study using the Chen Internet Addiction Scale (CIAS) methodology, it was found that 47 adolescents (85.5% of the total sample) are at risk of having or being addicted to the Internet. At the same time, according to the Questionnaire "Teenagers
